Welcome Fellow Aviators!

Minnesota's communities and aviation interest groups have worked in partnership with the Federal Aviation Administration and the Minnesota Office of Aeronautics to provide some of the finest airport facilities, navigational aids, and weather-access systems in the nation.

This system of airports allows travelers to access more than one hundred and forty communities throughout the state. This access helps communities to attract new businesses and businesses to attract new customers as well as accommodating those traveling in Minnesota for pleasure and those just passing through.

In this directory we have compiled information vital to pilots for safely using our airports. Included in this directory are "Hot Spot Charts" for Minnesota's tower-controlled airports. These "Hot Spots" are places on the airport where there is a higher probability of a runway incursion. We hope these pages help raise awareness to the problem of runway incursions at tower-controlled and non-towered airports alike.

This directory also contains information about facilities and events in the communities. We hope you will find this information useful in planning your flights within Minnesota and I encourage you to explore new locations and get to know the people that make Minnesota a great state. Fly Minnesota!

The State of Minnesota, Office of Aeronautics, Navigation Systems Section has installed Automated Weather Observation Systems (AWOS) at the locations listed above. The equipment, installation, and maintenance of these systems is funded entirely by this office.

From an optimum location on the airport, the AWOS measures and reports wind direction and speed, visibility, sky condition, temperature, dew point, type of precipitation, lightning strikes and barometric pressure which is converted into an altimeter setting. Current weather information can be obtained by telephoning the AWOS site. A computer generated voice relays up-to-the-minute observations.

The AWOS data is visually displayed on a remote computer monitor at the airport, and is simultaneously broadcast over the local radio navigation aid or a VHF transmitter for in-flight use. Data is gathered in 20-minute intervals from each AWOS site (ASOS data is gathered hourly with specials) and distributed nationally over an FAA NADIN computer network, allowing these reports to become available through computer weather systems such as MnWAS.

Where installed, the AWOS or ASOS is an official weather reporting source, and is approved without restriction for FAR Part 121 and 135 Operations. If you have any questions regarding the AWOS, please contact Bob Milton at 651-296-9250.

Minnesota Weather Access System (MnWAS)

Hot Spot Charts

The FAA has turned a spotlight on Runway Incursions. Anytime an aircraft, person or vehicle gets into the active runway environment without clearance there is the possibility of a collision and loss of life. The FAA has been collecting and analyzing data on Runway Incursions at tower-controlled airports. When they identify areas on an airport where there have been Runway Incursions or where pilots and vehicle operators have gotten disoriented, those spots are identified as "Hot Spots."

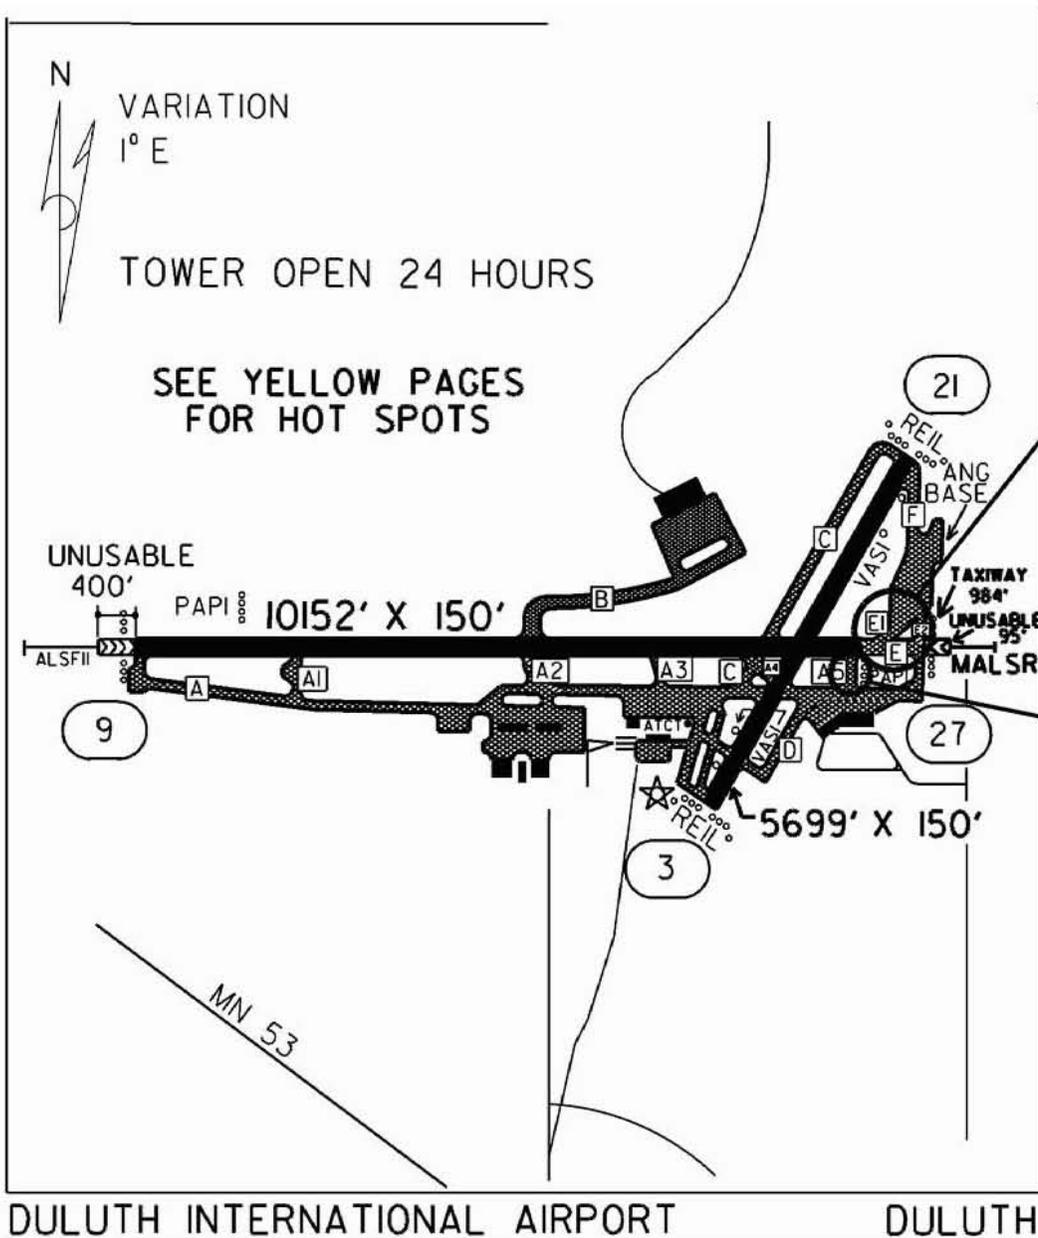

The following pages contain the Hot Spot Charts for the towered airports in Minnesota. These charts were current at the time that this directory went to press. For the most current information contact the airport manager.

Runway Incursions occur at non-towered airports and they are just as dangerous. There isn't any data for non-towered airports, but we can apply some of what we have learned about towered airports at non-towered fields. Runway Incursions are more common at complex intersections where more than two runways or taxiways intersect. Beware of obstructed intersections where the pilot cannot see the entire length of the runway they are entering or crossing. Be cautious when operating at airports with parallel runways.

At both tower-controlled and non-towered airports one of the best tools for fighting Runway Incursions is to use an airport diagram. The airport diagrams in this directory cover all of the Minnesota public airports. This information was current when we went to press, and as we become aware of changes we update the diagrams on our website at: www.mndot.gov.

For airports outside of Minnesota, many airport diagrams can be found in the Airport Facility Directory or the Instrument Approach Procedures. Airport diagrams for these airports and many more can also be found on the Internet at sites such as: www.airportdiagrams.com. We cannot guarantee the accuracy of the information found on this or any other website outside of our control.

We hope that you find the additional information included on these pages useful. As always, we welcome your feedback.

AIRCRAFT LANDING ON PARALLEL RUNWAYS 14-32 SHOULD USE CAUTION EXITING ONTO TAXIWAYS E-2 AND E-3. THERE IS ONLY 300 FEET BETWEEN THE PARALLEL RUNWAYS AND HOLD SHORT LINES APPROACH QUICKLY. FAILURE TO STOP IMMEDIATELY WOULD CAUSE AIRCRAFT TO PROCEED ONTO OTHER RUNWAY.

AIRCRAFT TAXIING ON TAXIWAY A FROM THE SOUTHWEST SIDE THAT DO NOT MAKE THE TURN ONTO TAXIWAY E FOR RUNWAYS 14R OR 32L PROCEED DIRECTLY ACROSS THE RUNWAY. TAXIWAY A, BETWEEN THE PARALLEL RUNWAYS, PRESENTS THE SAME PROBLEMS AS TAXIWAY E-2 AND E-3 ABOVE. AIRCRAFT AND FUEL TRUCKS TAXIING/DRIVING ON TAXIWAY A NORTHEAST OF RUNWAY 14L-32R SHOULD EXERCISE CAUTION WHEN CROSSING ACTIVE PARALLEL RUNWAYS 14-32 OR WHEN TAXIING TO RUNWAYS 6R OR 6L.

PILOTS TEND TO FORGET THAT THEY ARE INSTRUCTED TO HOLD SHORT OF TURF STRIP 6R-24L. HOLD SHORT LINES FOR RUNWAY 6R-24L, WHICH IS ONLY ACTIVE DURING THE SUMMER MONTHS, ARE PAINTED ON TAXIWAYS D AND F. PILOTS BECOME FAMILIAR WITH THE MARKINGS OF A PAVED RUNWAY, BUT THE SOD RUNWAY IS DESIGNATED ONLY WITH YELLOW CONES.

AIRCRAFT TAXIING ON TAXIWAY B, FROM THE WEST SIDE TO RUNWAY 24R OR 24L, TEND TO MAKE A RIGHT TURN AT TAXIWAY E, THEREBY CROSSING AN ACTIVE RUNWAY.

MINNEAPOLIS CLASS "B" AIRSPACE

100 = CEILING
40 = FLOOR X 100'

NOTE: EXPECTED CLASS "B" AIRSPACE
CHECK FAA CHARTS FOR
CURRENT CONDITIONS

The requirements of FAR 91.131 must be met before requesting Class "B" clearance. Clearance into MSP Class "B" must be received prior to entering. Flight within the 30 MI "veil" requires operating Mode - C Transponder or a waiver from ATC.

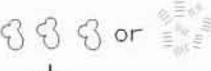

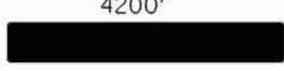

For your safety
and the safety of aerial firefighters

**FLY CLEAR OF WILDFIRES
AND SMOKE**

- Check NOTAMs for temporary flight restrictions
- General aviation pilots are asked to stay seven miles away from and 5,000 feet above all fires!
- Even if no fire fighting aircraft are visible, general aviators should assume they are in the airspace around a fire.
- Wildland fire aviators fly in less than ideal conditions; congested airspace, smoke, strong winds, power lines and radio towers. When you combine these conditions with general aviators flying to “check out the fire”, the results could easily be disastrous.

It has been determined in the best interests of proper game management to have waters set aside for migratory waterfowl feeding and resting areas. Therefore, the Department of Natural Resources prescribes the following regulations relating thereto:

Waterfowl Hunting Regulations

Motors prohibited on migratory waterfowl feeding and resting areas.

Annually a list of waters is designated by Commissioner's Order and by posting as migratory waterfowl feeding and resting areas during the open waterfowl season. No persons other than agents of the Commissioner in the performance of their duties, may use any kind of motor propelled watercraft or aircraft on the listed waters during the open migratory waterfowl season. For current information concerning the restricted water areas and the Migratory Waterfowl Sanctuary Order Number 30, Call the Department of Natural Resources at (651) 296-3344.

Zebra Mussel Alert For Float Plane Pilots

Float plane pilots are asked to be aware of the presence of an invasive species of clam in several water bodies, and the precautions that should be taken to prevent spreading them to other lakes or rivers. Zebra mussels have become established in Lake Ossawinnamakee, Zumbro Lake, St. Croix River south of Stillwater northern city limits, the Mississippi River from St. Paul downstream to the Iowa border and Lake Superior. The Department of Natural Resources appreciates any efforts float plane pilots can provide in preventing the spread of this damaging exotic species of mussel or other invasive species such as Eurasian watermilfoil. One important way to prevent this spread by float planes is to scrub the floats of their plane while still in the water or on dockage, especially important if the plane has been moored on an infested lake for more than a few hours.
