The total cost of preparing the Report on 2008 SCORE Programs was \$11,125 including staff time, writing, editing, and printing.

The MPCA is reducing printing and mailing costs by using the Internet to distribute reports and information to a wider audience. For additional information on recycling, waste prevention, and waste management, check out the SCORE Web site: http://www.pca.state.mn.us/score

This report was printed on recycled paper manufactured without the use of elemental chlorine (cover: 30% post-consumer; body: 100% post-consumer).

# Summary

This *Report on 2008 SCORE Programs* summarizes information submitted by all 87 counties and the Western Lake Superior Sanitary District (WLSSD) on waste management efforts, including waste reduction activities, recycling, household hazardous waste programs, yard waste, and problem materials collection.

In 2008, less MSW was generated and more was recycled.

# MSW generation

In 2008, while population increased, total waste generation dropped by 3.5 percent.

Minnesota's municipal solid waste (MSW) generation totaled 5,926,951 tons in 2008; this represents a total of on-site disposal, problem materials not recycled (PMNR), recyclables, MSW disposal and processing (landfilled, resource recovery facilities, and MSW composting).

In 2008, an average Minnesotan created 2,242 pounds of MSW per year or 1.12 tons. Minnesota's population increased to 5,287,976 or 0.5 percent.

# Recycling

In 2008, 2,589,954 tons were recycled, an increase of 0.2 percent. The base recycling rate, a more accurate measure of progress, for 2008 is 43.7 percent of the total MSW generated. With credits for yard waste recycling and waste reduction efforts, Minnesota's recycling rate for 2008 is 51.1 percent. The base recycling rate is the actual percentage of materials recycled; it does not include the additional source reduction and yard waste credits. The steady recycling growth reflects the significant state, local, and industry investment in our recycling system.

# MSW processing and disposal

In Minnesota, waste is managed through four main disposal and processing methods: landfills, resource recovery, MSW composting, and on-site disposal. In 2008:

- 1,935,188 tons were landfilled
- 1,187,680 tons were processed through resource recovery
- 17,630 tons were composted
- 71,423 tons were disposed of on-site

The amount of waste leaving Minnesota continues to decrease. In 2008, 604,287 tons left Minnesota to the states of Iowa, Wisconsin, North Dakota, and South Dakota.

# Funding

In 2008, Minnesota counties spent over \$57.8 million for SCORE-related programs — \$13.8 million (24 percent) was funded by the state, and \$44 million (76 percent) was funded by counties. Due to the 2007

Legislature and Governor's actions, to restore SCORE funds to the levels of 2002, \$13.8 was disbursed in calendar year 2008.

# Recycling markets

In 2008, global economic recession caused the price of virgin materials to drop significantly. Minnesota recycling markets experienced a drop similar to that which was seen in 1997. Many outside factors affected the price of the recycled materials, the two biggest were the economic recession and China pulling out of the market for a short while. Local recyclers also relied on selling to China's markets which in turn caused the local end users to find material elsewhere and sign long-term contracts. When the Chinese market dropped out, local recyclers were left with little opportunity to sell their material to local markets.

The local market has indicated interest to engage local recyclers if they are willing to sign long term supply contracts. Local market concerns are of losing raw material to China from local suppliers once the market recovers.

# **Introduction and Purpose**

In 1989, the Legislature adopted comprehensive legislation based on recommendations of the Governor's Select Committee on Recycling and the Environment (SCORE). This set of laws, Minn. Stat.§ 115A.551-115A.558, commonly referred to as SCORE, initiated a stable source of state funding for recycling programs, as well as waste reduction and the improved management of household hazardous wastes, yard waste, and problem materials. SCORE legislation provides grant dollars, along with funding to counties and local government for long-term flexible programs.

This *Report on 2008 SCORE Programs* (Report) summarizes information submitted by all 87 counties and the WLSSD on waste management efforts, including waste reduction activities, recycling, household hazardous waste programs, and problem materials collection.

The Minnesota Pollution Control Agency (MPCA) uses this information to calculate the state's recycling rates and the cost of managing waste and recycling, and to detail trends in waste generation and disposal. While data collection began in 1989, in 1991, counties began collecting data on a calendar year basis, instead of a fiscal year basis. By 1991, data collection and format had greatly improved, making the quality of the data that much better.

This report and information on the SCORE program are available on the MPCA's Web site at http://www.pca.state.mn.us/score. The MPCA continues to review and use the submitted survey data after publication of the final report each year. As a result, tonnages published in this report for previous years may not match the tonnages originally reported for those years. Occasionally, counties find errors, and it is necessary to adjust reported data after the final report is published.

Every other year, the MPCA expands on the annual report on SCORE programs and makes solid waste policy recommendations to the Legislature in the Solid Waste Policy Report. Work on the 2009 Solid Waste Policy Report has begun. See http://www.pca.state.mn.us/oea/policy/policyreport.cfm for more details.

# **MSW Generation in Minnesota**

Since 1999, Minnesota's MSW generation has slowed. Beginning in 2006, MSW generation growth slowed to an all-time low—increasing by only 0.3 percent in 2006, in 2007 by 0.07; however, in 2008, to a record low of -3.5 percent. This is the first time in the history of SCORE reporting that we have seen a decrease in MSW generation. In 2008, per capita generation of MSW dropped to 1.12 tons, down from 1.16 tons per capita over the past six years (2002-2007).

Mixed MSW is defined by statute as "garbage, refuse, and other solid waste from residential, commercial, industrial, and community activities that the generator of the waste aggregates for collection." It includes common materials found in household and commercial garbage, such as packaging materials, containers, food discards and other compostable materials, plastic, paper, etc. MSW does *not* include auto hulks, street

sweepings, ash, construction debris, mining waste, sludge, tree and agricultural wastes, tires, lead acid batteries, motor and vehicle fluids and filters, and other materials collected, processed, and disposed of as separate waste streams (Minn. Stat. § 115A.03, subd. 20). Total MSW generation *does* include wastes discarded (tons sent to disposal and resource recovery facilities), recycled, disposed of on-site (burn barrels or farm dumps), and PMNR.

# Totals and trends

Minnesota's MSW generation totaled 5,926,951 tons in 2008, a decrease from 6,140,012, in 2007. Statewide, this represents a decrease of 3.5 percent from the previous year. Greater Minnesota accounted for 43 percent of the state's MSW generation, and the seven-county Metropolitan Area accounted for 57 percent in 2008.

The four centroid areas — Duluth, St. Cloud, Rochester, and the Twin Cities — consisting of 17 counties, generate 70 percent of the waste in Minnesota, or 4,353,320 tons in 2008. This is a decrease of approximately 153,773 tons from 2007. Sixty-nine percent of Minnesota's population lives in these 17 counties, or 3,637,577 residents.

Since 1999, MSW generation dropped on average by 1 percent (1999-2008) and 0.07 percent over each of the past five years (2004-2008). Counties attribute the 2008 decrease to less tourism, and less consumer spending as seen by businesses closing or cutting inventory. While improvement in waste reduction efforts may account for some decline, waste generation generally decreases during times of economic recession and increases during an economic expansion.

#### Figure 2: Minnesota MSW generation

Total 2008 generation: 5,926,951 tons

For 2007–2008, the amount of MSW generated in Minnesota decreased by 3.5% while population increased by 0.5%.

MSW Generation	1999	2000	2001	2002	2003	2004	2005	2006	2007	2008	Change 2007-08
Greater Minnesota	2.14	2.20	2.32	2.37	2.41	2.53	2.56	2.58	2.60	2.57	(1.2%)
Metropolitan Area	3.30	3.43	3.42	3.49	3.51	3.45	3.52	3.52	3.54	3.36	(5.2%)
Statewide	5.44	5.63	5.74	5.86	5.92	5.98	6.08	6.10	6.14	5.93	(3.5%)

Figures in millions of tons

# On-site disposal and problem materials not recycled

On-site disposal of MSW, either burning or burying, has been used for generations and still is being used. Although it is against the law for most people, some farmers are allowed to burn or bury their household garbage under existing Minn. Stat. §§ 88.171 and 17.135.

In the 2008 SCORE survey, counties estimate that 1.2 percent of the total waste generated is disposed of onsite, — an increase of 394 tons (0.6 percent) from 2007 (71,029 tons up to 71,423 tons).

Problem materials not recycled (PMNR) make up 2 percent of the total MSW generation for 2008. PMNR includes five materials that have been banned from disposal in Minnesota (vehicle batteries, tires, major appliances, motor oil, and oil filters). The PMNR number is that portion of the materials that is not recycled, but is assumed to be disposed of somewhere, legally or not, as they are banned from MSW disposal facilities. It is assumed that they are not being counted in landfill or incinerator tonnages.

# Per capita MSW generation

The MPCA calculates the amount of waste that the average Minnesotan creates each year in an attempt to understand if waste growth is coming primarily from an increase in population or increases in consumption.

In 2008, the Minnesota per capita rate decreased (-3.91 percent from 2007) to 1.12 tons per person (2,242 pounds/person/year). This is consistent with the decreases seen in MSW generation (-3.5 percent) and with Minnesota's economy. In looking at Greater Minnesota versus the Metropolitan Area per capita rate, we find that the Greater Minnesota per capita rate is 1.06 tons (2,125 pounds/person/year), a decrease of approximately 1.31 percent from 2007. In comparison, the Metropolitan Area per capita rate is 1.170 tons (2,340 pounds/person/year), a decrease of 5.85 percent from 2007.

Minnesota's population continues to grow. In 2008, Minnesota's population increased 0.5 percent to 5,287,976 from 2007 population of 5,263,610—Greater Minnesota by 0.1 percent and the Metropolitan Area by 0.7 percent. In the last five years, Minnesota's population increased approximately 28,574 per year; however in 2008, the population increased by only 24,366. From 1991 to 2008, Minnesota's population grew 19.7 percent—Greater Minnesota increased 15.3 percent and the Metropolitan Area increased by 23.8 percent.

# **Recycling and Benefits**

Minnesota's recycling programs are among the nation's most successful. In 2008, 2,589,954 tons were recycled; Minnesota's recycling rate (including credits for yard waste recycling and waste reduction efforts) increased by 1.6 percentage points to 51.1 percent. The state's base recycling rate is approximately 43.7 percent, an increase of 1.59 percentage points. The base recycling rate is a more accurate measure of progress as it is the actual percentage of materials recycled; it does not include the additional source reduction and yard waste credits. While this growth reflects the significant state, local, and industry investment in our recycling system, as well as strong material markets, evidence suggests much more could be done to recover the millions of tons of discarded recyclable and organic materials still disposed of each year.

In 2008, 27 percent of the materials collected for recycling in Minnesota came from residential sources; this is up slightly from 25 percent over the last 10 years. Commercial, industrial, and institutional recycling, both documented and undocumented industrial sectors, accounts for another 71 percent, and mechanical/hand separated recycling accounts for the remaining 2 percent.

t

#### ◆ 52% Metropolitan Area

■ 50.9% Greater Minnesota

#### ▲ 51.1% Statewide

Since the SCORE legislation was enacted in 1989, Minnesota's statewide recycling rate has climbed by over 26.5 percentage points.

In 2008, recycling programs in Minnesota collected approximately 2.6 million tons of recyclable materials (paper, metal, glass, plastic, food, source-separated organics, problem materials, and more), an increase from 2007 of 0.2%.

Recycling Rates	2001	2002	2003	2004	2005	2006	2007	2008
Metropolitan Area	48.2	47.4	46.7	47.8	49.7	49.7	50.5	52.0
Greater Minnesota	46.5	46.5	47.0	48.6	48.0	48.6	49.3	50.9
Statewide	46.9	46.6	46.5	48.0	48.5	48.7	49.5	51.1

The total reported recycling tonnages are from documented and estimated sources. Documented tonnages account for 66 percent of the total recycling tonnages. Counties ask for, and the majority of them are able to receive, documented tonnages from their haulers, recyclers, and businesses. This is a difficult task for all counties, especially those in the Metropolitan Area due to the large population and businesses, the number of haulers, along with municipalities that contract for recycling. The amount of staff and time placed into the collection of tonnages, enables the county to better identify and receive documented tonnages which increases the degree of accuracy in annual reporting.

Counties have available to them tools that they can implement to assist them to obtain necessary and accurate data, along with assisting in their solid waste management programs. The Solid Waste Ordinance is one such tool, along with licensing of solid waste and recycling haulers.

It may help to look at the submitted 2008 SCORE survey to better understand and identify how many counties implement these tools and how it may relate to the counties' recycling rates. Below are break outs from the general survey questions to recycling:

- **Curbside collection** Counties reported in the 2008 SCORE survey that there are 799 cities or townships that offer curbside collection at least once a month, serving over 4 million people or over 76 percent of Minnesota residents. There are 24 counties in Minnesota that have less than a 35 percent recycling rate with credits. The population of these counties ranges from 3,724 to 105,000. In these 24 counties, it is estimated the percentage of the population receiving curbside collection ranges from 0 percent all the way to 99.49 percent.
- **Commercial/industrial recycling promotion** The survey asks if the county has specific programs promoting commercial/industrial recycling: 65 counties said yes, 22 counties said no. Of the counties with less than a 35 percent recycling rate; 9 of the 24 counties have no program for commercial/industrial recycling.

- Availability to recycling centers, stations, or MRFs All 87 counties have at least one recycling center, station, or MRF available to their residents for recycling. Some counties have a combination of centers, stations, or MRFs available for their residents. Minn. Stat. § 115A.552, Opportunity to Recycle, describes county requirements, opportunities, education, and promotion of their recycling programs.
- Banned recyclable materials from landfills or disposal Only 18 counties of the 87 have banned recyclable materials from disposal. The 24 counties with less than a 35 percent recycling rate indicate that only 2 of them have banned recycling from disposal.
- Enacted solid waste ordinances requiring residents to recycle, businesses to recycle, and haulers to provide recycling collection services Only 21 counties have enacted an ordinance requiring residents to recycle, and 20 of those counties require businesses to recycle. Only 30 of the 87 counties require haulers to provide recycling collection services. If counties have not enacted an ordinance, the 2008 SCORE survey shows that 114 cities have enacted an ordinance requiring residents to recycle. Only 53 cities have enacted an ordinance requiring businesses to recycle and 155 cities require haulers to provide recycling collection services. Looking closer at the 24 counties with less than a 35 percent recycling rate, 3 of them have an ordinance requiring residents and businesses to recycle. Four of the 24 counties require haulers to provide recycling collection services. Two of the 24 counties that have not enacted an ordinance, reported that there are 5 cities that require residents to recycle; 3 cities require businesses to recycle, and 22 cities require haulers to provide recycling collection services.
- Licensed recycling collectors Just over half of the counties in Minnesota license their haulers, 50 counties report that they license recycling collectors. However, 66 counties report that they require recyclers to submit tonnage reports. Eleven of the 24 counties, with less than a 35 percent recycling rate, indicate that they license recycling collectors and 16 require recyclers to submit tonnage reports.

Below is a summary of the 2008 SCORE general survey questions in regard to solid waste. [The survey questions are: do counties license solid waste haulers, and if not, do the cities; and are the solid waste haulers required to have variable-rate pricing structure.]

- **County solid waste licensing** Out of the 87 counties, 79 license solid waste haulers and 67 of those report that they do not know or is not applicable that their cities license solid waste haulers. Looking at the 24 counties with less than a 35 percent recycling rate, 21 counties state that they license their solid waste haulers. There are only 3 counties that do not license; however, 1 of those counties report that its cities license solid waste haulers.
- Variable-rate pricing In the 2008 SCORE survey, 76 counties reported that they require variable-rate pricing of their solid waste haulers. Fifteen of the 24 counties that have less than a 35 percent recycling rate state that they do require solid waste haulers to have variable-rate pricing structures in place.

In Minnesota, an estimated 4,057,345 people, or 76 percent of the population is served by curbside recycling programs for 2008. In 2007, the population served by curbside collection was 3,593,483.

In 2008, Minnesota county recycling programs collected approximately 2.6 million tons of recyclable materials (paper, metals, glass, plastic, food, problem materials, etc.) — an increase of over 4,544 tons, or 0.2 percent from the previous year. Since the SCORE legislation was enacted in 1989, the tons of materials collected for recycling in Minnesota have more than tripled, and the statewide recycling rate has increased by more than 28 percentage points, moving from 23 percent to 51.1 percent.

In order to understand the increase in recycling in contrast to the market drop and economic recession, the table depicts the recycling tonnages by category, from 2007 and 2008 and also the change seen. In 2008, due to

high markets for metal earlier in the year, the majority of the increase seen in recycling was in metals. The majority of the tonnages lost, in 2008, were from organic and paper recycled tonnages. This is the second year organics reported tonnages have decreased from the high in 2006 of 179,000 tons. Organic recycling consists of food to livestock, food to people, and source separated composting.

The 17 counties in the four centroid areas, the geographical urban area of Minnesota recycled a total of 1,839,382 tons or 71 percent of the total amount recycled in Minnesota in 2008. This is an increase of 13,286 tons or a 0.73 percent increase from 2007. This does not follow the Minnesota trend, statewide we saw a small increase of 0.2 percent from 2007.

Category	2007 Tonnage	2008 Tonnage	Change from 2007
Banned	121,395	126,807	5,412
Glass	126,496	126,391	(105)
Metal	491,715	517,441	25,725
Organics	177,227	153,481	(23,746)
Other	670,009	695,522	25,513
Paper	932,223	901,879	(30,343)
Plastic	49,419	52,197	2,778
Textiles	16,926	16,236	(690)
Total	2,585,410	2,589,954	4,544

# Economic and environmental benefits of recycling

Recycling is important in Minnesota—both economically and environmentally. Minnesota's recycling manufacturers continues to contribute an estimated \$3 billion to the state's economy; and over 9,000 manufacturing jobs are tied to companies using recycled material in their manufacturing processes. Over \$760 million in wages is related to recycling activities. In addition to the contributions of these value-added manufacturers, there is economic value related to collecting, processing, and marketing recyclables in Minnesota (which is supported by SCORE dollars).

## **Recycling markets**

#### Outside economic indicators affecting market

Many outside factors affected the price of the recycled material market in 2008. The two biggest markets were the 2008 global economic recession which caused the price of virgin materials to drop, and China exiting the markets for a period of time. The price of recycled material closely tracks the virgin material markets. There was a similar drop for recycled material in Minnesota in 1997. Since 1997, Minnesota has added additional capacity in paper and plastic which helps cushion the drop in markets.

#### Local markets

A strong local recycling infrastructure promotes local job development and capital investment, two essential needs during these difficult economic times.

The largest segment of the value-added recycling industry is made up of manufacturers who use recycled paper, post-consumer paper, old corrugated cardboard, and newspaper as raw materials. Major companies around Minnesota include Rock-Tenn (St. Paul), Liberty Paper (Becker), New Page (Duluth), Pactiv (Moorehead), and Insolution (Lorreto). These companies use 820,000 tons of cardboard, office paper, and newspaper annually, much of their raw material is collected from Minnesota curbside and business recycling programs.

Minnesota has one of the largest concentrations of plastic lumber/sheet manufacturers in the country: Master Mark Plastic (Albany), Bedford Technology (Worthington), and Recycled Plastic Inc. (Garfield). A phone survey to the local paper, plastic, and glass markets still indicated demand for these materials.

#### Over reliance on China by some local recyclers

Some recyclers put a great deal of reliance on the China market due to increased upward pricing opportunities. This caused the local end users to bring in raw material from other sources because they were unable to source enough material locally. The evaporation of the China market for the recyclers has left them with little to no opportunity with the local market due to the long term supply contracts. The local end users have indicated they would engage local recyclers if recycler were willing to sign long-term supply contracts. The-local market is concerned that it would lose raw material to China from local suppliers once the market recovered.

In response to and in order to open this dialogue with local recyclers, the Minnesota Pollution Control Agency in partnership with Recycling Association of Minnesota, Southeast Minnesota Recycler's Exchange (SEMREX), and the Solid Waste Management Coordinating Board (SWMCB) held three market workshops around the state, late 2008 and early 2009.

Discussion included markets for materials, such as plastic, paper, glass, and other region-specific materials, as well as potential partnerships, resort and event recycling, and transportation logistics. The workshops also offered attendees the chance to:

- see a snapshot of recycling tonnages and markets in your region
- hear about local, national, and international market conditions
- discover opportunities for improving your recycling program's efficiency and cost-effectiveness
- learn about local success stories
- hear from recycling markets in your region and other parts of the state and have an opportunity to talk with them one-on-one

### **Environmental benefits**

One measure of Minnesota recycling environmental benefits is the reduction of green house gas emissions compared to other waste management practices. The U.S. Environmental Protection Agency created a tool to measure and track these benefits: the Waste Reduction Model (WARM). Calculations using Minnesota recycling of 2.6 million tons of material in 2008 show that: According to WARM, by recycling 2.6 million tons of materials in 2008, Minnesota:

- reduced 7.9 million metric tons of carbon dioxide equivalent (MTCO2E)
- saved 84.1 million BTUs

WARM is available both as a Web-based calculator and as a Microsoft Excel spreadsheet (317K WinZip archive). http://epa.gov/climatechange/index.html

# **MSW Processing and Disposal**

In Minnesota, waste is managed through four main methods: landfills, MSW composting, resource recovery facilities, and on-site disposal. In 2008, waste that was not recycled or prevented/reduced and, therefore, must be disposed of, totaled nearly 3.1 million tons—a decrease of over 219,056 tons (-6.5 percent) from 2007. This number includes waste landfilled and processed, as well as estimates for on-site disposal and PMNR.

Figure 4:	MSW processing and disposal in Minnesota
-----------	--

MSW compost	17,630 tons
On-site disposal	71,423 tons
Waste-to-energy	1,187,680 tons
Landfill	1,935,188 tons
PMNR	125,075 tons

# Trends in waste disposal

Waste management in Minnesota is guided by a hierarchy that prioritizes waste reduction, recycling, composting, and resource recovery. During 2008:

- MSW composting decreased slightly by 1.7 percent—from 17,930 tons in 2007 to 17,630 in 2008.
- On-site disposal (estimates from county staff on the level of on-site dumping and burning that occurs) increased by 0.6 percent (more than 394 tons) to 71,423 tons.
- Waste-to-energy (WTE) in comparing tonnages from the previous year, 2007, the 2008 tonnage decreased by 1.3 percent (15,264 tons) to 1,187,680 tons. Permitted capacity remained the same in 2008; facility downtime for improvements or repairs accounts for some of the decreases of waste handled by WTE facilities in 2008.
- Landfilling decreased by 203,492 tons, or -9.5 percent to 1,935,188 tons. Landfilling, is the most dominant disposal method, and in turn saw the largest decrease. Despite being the least-preferred option, landfilling remains the dominant disposal method in Minnesota.
- PMNR (Problem Materials Not Recycled) increased by 1,058 tons or by 0.9 percent to 125,075 tons. PMNR tonnages consist of reported tonnages, most of the tonnage is a calculated tonnage based on population and the amount generated, minus the amount recycled.

#### Figure 5: Trends in Minnesota waste management in tons

Landfill MSW compost Waste-to-energy PM not recycled (est.) On-site disposal (est.)

Recycling

Trends in Tons	1999	2000	2001	2002	2003	2004	2005	2006	2007	2008	Change 2007-08

Figures in millions of tons

#### Out-of-state waste flow

In tracking the trends of the amount of waste generated, and where that waste is processed and disposed of, we find that in 2008, 604,287 tons left Minnesota. This equates to 19 percent of the total waste landfilled or processed at a Waste to Energy facility is taken out of state. To break that amount further, 10,923 tons were processed at a Waste to Energy facility and 593,364 tons were landfilled in the states of Iowa, North Dakota, South Dakota, and Wisconsin. In comparing 2008 to 2007, there is a decrease of 100,560 tons (-14 percent) in the amount of MSW leaving Minnesota.

While many factors may contribute to this decline in out-of-state waste flow (facility locations, hauling companies in operation, existing contracts, surcharges and tip fees, and gas prices), the economy, increasing state surcharges from Wisconsin and rising transportation costs likely have the most impact. The price of diesel is probably the largest reason for the decline in MSW leaving Minnesota. In 2008, petroleum prices began in January at \$3.159 and ended December at a low of \$1.67; the month of July, gas prices showed to be the highest at \$4.165: http://tonto.eia.doe.gov/dnav/pet/hist/mg\_tt\_usw.htm.

MSWI	eaving Minnesota
2001	671,954 tons
2002	614,002 tons
2003	702,131 tons
2004	850,204 tons
2005	812,379 tons
2006	742,093 tons
2007	705,631 tons

615,210 tons

# Funding of SCORE Programs

Minnesota boasts one of the best recycling rates in the nation due to the level of participation by our residents and businesses, along with comprehensive recycling programs at the township, city, and county levels—programs funded by local government and state revenues.

In 2008, Minnesota counties spent \$57.8 million for SCORE-related programs, an increase of \$1,934,546 (3.5 percent) from 2007. Continued funding commitments from the Legislature and significant investments at the local level provide the funding for these programs.

# State funding: SCORE block grants

From the inception of SCORE, state tax revenue has provided a long-standing funding source for recycling and waste reduction programs. The Legislature, in 1989, set up a funding source for SCORE by passing Minn. Stat. § 297A: General Sales Tax and Distribution (SCORE). The rate of tax on residential generators of mixed municipal solid waste management services set in 297H.02 is 9.75 percent. In Minn. Stat. §297H.03, commercial generators tax rate for solid waste management services was set at 17 percent. Industrial and construction debris, meeting definitions in Minn. Stat. § 115A.03, set in 297H.04 is taxed at 60 cents per cubic yard. Infectious waste, defined in Minn. Stat. § 116.76, is taxed at 60 cents per 150 pounds.

In fiscal year 2008, total solid waste tax received was \$67.3 million. Of that amount, \$20.2 million was deposited into the general fund, and \$47.1 million was deposited into the environmental fund. Appropriations from the environmental fund pay for SCORE grants as well as many other solid waste programs. Greater Minnesota counties received over \$7 million and the seven Metropolitan Area counties received over \$6.9 million. In Minn. Stat. § 115A.557, the Legislators describe how the SCORE disbursements are appropriated to counties. SCORE disbursement dollars are to be distributed each fiscal year based on population, with an established per county base minimum of \$55,000.

Money from the state is passed on to the county level in the form of annual block grants as described in Minn. Stat. § 115A.557. SCORE disbursements are to be appropriated to counties each fiscal year based on population. In the 2007 session, the Legislature and Governor Pawlenty took action to restore SCORE funds to the levels of 2002, or \$14 million per year. \$13.8 million was disbursed in calendar year 2008, which is approximately 24 percent of the amount spent on SCORE-related programs.

Restored SCORE grant dollars to previous levels of \$14 million and the state's renewed interest in its commitment to recycling and product stewardship, presents counties the ability to restore their reduced or cut programs. Additional funding could enhance the ability to remove usable materials from the disposal system and capture energy and economic benefits for the state.

Despite the economic value of the recycling industry to the state's economy, Minnesota's recycling infrastructure faces challenges. Some counties are dealing with budget reductions by closing down recycling centers or limiting the types of materials they collect. Plastic and glass recycling have been eliminated in some communities. Rural recycling programs, in particular, are facing more obstacles in getting materials to distant markets. The MPCA continues to explore ways to better support county recycling programs and secondary markets, recover more recyclable and organic material from the waste stream, and identify more opportunities to reduce, reuse, and recycle in the manufacturing and business sectors.

#### Figure 6: SCORE expenditures (millions of dollars)

# County funding

Within certain guidelines, counties have broad discretion in determining how to spend SCORE block grants and local matching funds, which gives them flexibility to develop programs that best meet local needs. The MPCA monitors the counties' use of SCORE grants to ensure the money is used to fund SCORE-eligible programs: source reduction, recycling, market development, management of problem materials, waste education, litter prevention, technical assistance to ensure proper solid waste management, and waste processing (Minn. Stat. § 115A.55).

Between 1999 and 2008, overall SCORE expenditures have increased by 40 percent. These increases have been funded entirely at the local level by counties and cities through use of general revenue dollars, special assessments, or other sources of revenue. In 2008, a total of \$57.8 million was spent on SCORE expenditures. Greater Minnesota counties *increased* expenditures by \$2.4 million (7.5 percent) and the Metropolitan Area counties *decreased* their spending by \$499,313 (-2.1 percent) from 2007.

County Expenditure	1999	2000	2001	2002	2003	2004	2005	2006	2007	2008	Change 2007-08
<b>Greater Minnesota</b>	22.9	23.1	25.8	26.7	29.5	28.5	30.22	31.25	32.54	34.98	7.5%
Metropolitan Area	18.3	18.5	20.2	19.9	19.7	22.6	24.06	23.35	23.38	22.88	(2.1%)
Total	41.3	41.6	46.0	46.7	49.1	51.1	54.28	54.60	55.9	57.86	3.5%

Figure in millions of dollars. The annual SCORE survey includes only county spending; local units of government also fund programs for waste management, reduction, and recycling.

Minn. Stat. § 115A.557 requires each county to match the funding from the Legislature with a local contribution of at least 25 percent. In 2008, county funds continued to exceed this match, spending over \$44 million or 76 percent of the amount spent toward SCORE-related activities. This investment is in addition to undocumented dollars spent by other local units of government, such as cities and townships, on programs such as recycling, household hazardous waste, and waste education.

In 2008, counties' increase in spending, in part, is due to economic recession and market price drops experienced in the fall of 2008, along with SCORE dollars not keeping up with inflation. These spending increases, by counties, have paid for additional costs to recycling, source reduction, education, and market development programs. County grants to other local unites of government increased as the amount spent on county planning, oversight and administration decreased.

Counties face growing challenges to collect materials and deliver them to markets. Counties' declining dollars are not covering their existing recycling programs and have been hard pressed to expand their recycling programs. Counties are aware of the millions of tons of remaining recyclables in the waste stream along with the missed economic and environmental benefits associated with recycling.
