

Quadrennial Review of Minnesota Child Support Guideline (2010)

Minnesota Department of Human Services
Child Support Enforcement Division
444 Lafayette Road North
St. Paul, MN 55155-3846

Summary of federal requirement:

Federal regulations require states to review their child support guidelines at least once every four years [see 45 CFR §302.56(e)]. This review must consider economic data on the cost of raising children and an analysis of case data relating to application of the guidelines. The analysis of case data must also focus on the extent of deviations from the guidelines. The data analysis must be used in the review to ensure that deviations from the guidelines are limited [see 45 CFR §302.56(h)].

State statutory requirement:

The federal requirement is codified in Minnesota law §518A.77

No later than 2006 and every four years after that, the Department of Human Services must conduct a review of the child support guidelines.

Overview

Prior to 2007, Minnesota determined the amount of the child support by assigning a percentage of the obligor's income as child support. The obligee's income was not taken into consideration. If the obligor's income was over \$1001 then he or she paid the following:

- 25% of his or her income for one child,
- 30% for two children,
- 35% for three,
- 39% for four,
- 43% for five,
- 47% for six, and
- 50% for seven children.

Minnesota amended its child support guidelines in the 2005 and 2006 state legislative sessions. The new guidelines effective January 1, 2007 adopt a shared income model where both parents' incomes are considered when determining the amount of the child support order.

Available data on the cost of raising children:

There are seven different estimates of child-rearing expenditures that are generally considered by states as part of their guideline review. The estimates vary by methodology and the years in which the survey data were collected. These studies use intact families as the basis for estimating the percentage of family expenditures that are allocated to children.¹ The estimates from the studies are shown in Table 1.

¹ Venohr, Jane C. and Tracy Griffity (2002). *Report on the Michigan Child Support Formula*. Policy Studies, Inc. for Michigan Supreme Court.

Table 1: Estimates of Average Child-rearing Expenditures, Various Studies

Author (Year)	Data Years ^a	Methodology (Use in child support guidelines)	Average child-rearing expenditures as a percent of total family expenditures		
			One Child	Two Children	Three Children
Espenshade (1984)	1972-73	Engel Estimator (Used in 8 states)²	24%	41%	51%
Betson (1990)	1980-86	Engel Estimator (Not used in any state)	33%	49%	59%
Betson (2001)	1996-98	Engel Estimator (Not used in any state)	30%	44%	52%
Betson (1990)	1980-86	Rothbarth Estimator (Used in 19 states)³	25%	37%	44%
Betson (2001)	1996-98	Rothbarth Estimator (Used in 2 states)	25%	35%	41%
Lino (2000)	1990-92	USDA (Not used in any state)	26%	42%	48%
Betson (2001)	1998-98	USDA (modified) (Not used in any state)	32%	46%	58%

^a All estimates use data from the Consumer Expenditure Survey produced by the federal Bureau of Labor Statistics

The three different methodologies for estimating child-rearing expenditures are the Engel, Rothbarth, and the U. S. Department of Agriculture (USDA) approach. A methodology is necessary to separate the child's share from the adults' share of household expenditures on common goods (e.g., housing, food, and transportation). The Engel and Rothbarth estimators are considered marginal cost approaches because they compare total expenditures of two equally well off families: one with children and the other without children. The difference in expenditures between the two households is assumed to be what is spent on child-rearing. The Engel and Rothbarth methodologies use different benchmarks to identify equally well-off families. The Engel Estimator uses the percent of family expenditures on food and the Rothbarth Estimator uses the percent of family expenditures on adult goods.

The USDA methodology uses the expenditure categories reported in the Consumer Expenditure Survey, adding together the amounts to determine the amount attributable to spending on children. The major expenditure categories (e.g., housing and transportation) are allocated using a per capita approach. Per capita allocation assumes expenditures for household expenditures are shared equally among household members, so the housing cost for a child is the same as for an adult. Some expenditures (children's clothing, education and child care) are reported directly in the Consumer Expenditure Survey and the USDA methodology uses the reported amounts in these areas to estimate expenditures on children. Other expenditures (food and health care) are divided between parents and the children using proportions measured from other more detailed surveys

² Data as of 2002

³ Data as of 2002

conducted by the federal government. To determine total expenditures on children, all of these amounts are added together.

According to a 1990 report to the Department of Health and Human Services, there is no consensus that any single estimation methodology is better than others⁴. This report concludes that the various estimates should be considered as expressing a possible range of actual expenditures on children. According to the report, the Engel methodology is theoretically most likely to overstate child-rearing expenditures and the Rothbarth methodology is theoretically most likely to underestimate child-rearing expenditures.

Comparison of available data to Minnesota guideline amounts:

Comparison using both the Rothbarth and Engel estimators is appropriate given that they are the most widely used methodologies for child support guidelines in other states. Table 2 below presents monthly expenditures per child for the Rothbarth and Engel studies as well as the Minnesota guidelines. The expenditures are horizontally stratified by income ranges for one through three children.

Table 2: Comparison of monthly child rearing expenditures, Rothbarth, Engel and MN Guidelines

Monthly Income	One Child			Two Children			Three Children		
	Rothbarth	G'Lines	Engel	Rothbarth	G'Lines	Engel	Rothbarth	G'Lines	Engel
\$0 – \$1,999	297	235	382	418	348	559	484	403	652
\$2,000 – \$3,999	577	607	712	805	969	1049	927	1117	1248
\$4,000 – \$5,999	822	822	1032	1135	1252	1497	1297	1443	1758
\$6,000 – \$7,999	954	960	1216	1293	1538	1752	1450	1770	2038
\$8,000 – \$9,999	1057	1140	1365	1425	1857	1975	1596	2136	2312
\$10,000 – \$11,999	1197	1390	1573	1602	2249	2272	1788	2600	2651

Estimates of Child-Rearing Expenditures 1996-99
[Using Betson- Rothbarth (2001)]

Table 2 is a comparison of the monthly expenditures to raise a child. One to three children are identified because over 97% of our caseload is represented by 1-3 children.⁵ The table considers the cost of basic support only and does not take into account expenditures for child care and medical support.

Table 2 indicates monthly income in \$2000 strata with the exception of the last strata which is a \$3000 range. The Rothbarth and Engel estimates represent the lower and upper bound of expenditures for raising children (respectively). The Guidelines column represents the amount it costs to raise a child per month as determined by the Minnesota legislature.

Each figure in table 2 represents the average expenditure amount for that income stratum. With the exception of the lowest income strata (\$0-1,999) the guidelines fall within the lower and upper bound of cost to raise a child when averaging by strata.⁶

Application of the guidelines:

Minnesota Statute 518A.35 requires that all child support cases follow the child support guidelines.

The guideline in this section is a rebuttable presumption and shall be used in any judicial or administrative proceeding to establish or modify a support obligation under this chapter.

Deviation from the guidelines:

Minnesota gathered and analyzed all available system data which resulted in two findings.

Minnesota's IV-D child support system, PRISM has a 'deviation reason' indicator. Workers can use this field to identify the reason for a deviation from the guidelines. There is a potential limitation to this data. Although the field is worker-entered, it is not a required field. Cases that are legitimate deviations may not be coded as such and therefore are not easily tracked. By analyzing the number of times the deviation indicator was used since the income shares model was established (1/1/07 – 12/31/09), approximately three quarters of one percent (0.75%) of new establishment orders were identified as deviations.

⁵ The entire schedule for 1-6 children can be found in Appendix B.

⁶ The lowest income strata falling below the lower range was intended by the legislature to allow low income parents enough income to sustain themselves (self support reserve).

The other approach used to determine the number of deviation was to review documents on PRISM used to prepare for court. A system scan was performed to determine the percentage of cases that had deviations in these court documents. An analysis of this data determined that approximately 4% of cases had deviations from the guidelines. However there are significant limitations to this data. The total number of cases that used these documents was approximately 21,000. This represents approximately 11% of the new or modified caseload during the review period of January 1, 2007 through December 31, 2009. The state's largest county, Hennepin, as well as other smaller counties does not use the online forms. Their internal variation of the form is not tracked by the state office. Furthermore, the form itself does not indicate that a deviation was ordered by the court. Rather, it is in preparation for a potential deviation which may or may not be ordered.

Due to present system limitations Minnesota is unable to fully determine the percentage of deviations from the guidelines through an electronic means. The deviation indicator and the court documents while presenting some valuable data, lacks the complete picture. When the child support system is renewed Minnesota will enhance the mechanisms to support the analysis of deviations. In conclusion, based on an analysis of the data available, Minnesota has determined that the guidelines are used in the vast majority of new or modified cases and deviations are very infrequent.

Appendix A

One of the goals of the study was to determine how often deviations occurred since the start of the new guidelines January 1, 2007. As previously mentioned one way we attempted to do this was by reviewing how often the deviation reason indicator was used. Data warehouse queries were built to determine how many times the indicator was found on the Support Order Detail screen from January 1, 2007 through December 31, 2008.

Before determining which cases used the indicator the court order types had to be determined. There were a total of seven court orders types monitored for potential deviations. They include: dissolution (DDS), motion to establish (MES), motion to set (MOS), paternity (PAT), review/adjust modify (RAM), support established (SES), and temporary paternity (TPT).

The table below identifies the type of order per year and the number of deviations based on the deviation reason indicator which showed that approximately 0.75% of cases had deviations during this two year timeframe.

Sum of Count		Deviation Indicator		
Year	Type	N	Y	Grand Total
2007	DSS	4,385	31	4,416
	MES	11,149	154	11,303
	MOS	1,466	20	1,486
	PAT	4,835	31	4,866
	RAM	18,519	87	18,606
	SES	492	1	493
	TPT	20	0	20
2007 Total		40,866	324	41,190
2008	DSS	4,157	19	4,176
	MES	12,071	169	12,240
	MOS	1,661	17	1,678
	PAT	5,081	29	5,110
	RAM	20,223	107	20,330
	SES	460	4	464
	TPT	17	0	17
2008 Total		43,670	345	44,015
Grand Total		84,536	669	85,205

Appendix B

The following data indicates that Minnesota's new guidelines fall within a standard range of costs to raise a child. The schedule expands on the Table 2 data (page 4) and encompasses both the guidelines data and the studies from Engel and Rothbarth.

Note: shading identifies guideline outside the upper or lower bound.

Schedule for one child

Combined Parental Income	Lower Bound (Rothbarth)	Guidelines Amount	Upper Bound (Engel)
0	799	182	50
