v. 1

LEGISLATIVE REFERENCE LIBRARY
SERIALS SECTION 334 W
Serials Division 33455

INTRODUCTION

The Minnesota Department of Natural Resources has collected data on the quantity of water appropriated from the state's surface and ground water resources since 1950. The need for readily accessible information in order to wisely manage and allocate Minnesota's water resources brought about an effort to computerize water use data during the mid-1970's. This report contains only the DNR appropriation permits. At the present time DNR, working with the United States Geological Survey, is expanding this type of information to include other agencies water discharges and unreported water appropriations.

The reported 1980 Water Use Almanac has been prepared through the joint efforts of the Department of Natural Resources, Division of Waters and the Office of Planning, Research and Policy Section. Funding for the computer programming and printing was provided by the Legislative Commission on Minnesota Resources. Partial funds for coding the information came from the United States Geological Survey.

DATA COLLECTION AND REPORTING PROCEDURES

Pursuant to Minnesota Statutes and Department of Natural Resources Rules, an individual or entity is required to hold a water appropriation permit except for: domestic uses serving less than 25 people for residential purposes; or withdrawal for any use at a rate not exceeding 10,000 gallons per day or totaling more than 1 million gallons per year.

Under the terms of an appropriation permit, the permittee is required to measure the quantity of water appropriated to within ten percent of the actual amount withdrawn unless otherwise exempted by special provision. In addition, the permittee is required to report the monthly amount of water appropriated or used for each permitted installation to the Department of Natural Resources. The data contained in this Almanac represents about 4,900 authorized (e.g., permitted) appropriators who reported 2,405,882 million gallons of water withdrawn in the calendar year of 1980.

The 1980 Water Use Almanac lists water appropriation information as supplied by permittees. No attempts have been made to verify the accuracy of the information. It should also be noted that this report does not contain information on approximately nine percent of the total number of authorized appropriators who did not report their water use, nor does this document include information on water use that does not require an appropriation permit.

ORGANIZATION AND CONTENT OF THE 1980 WATER USE ALMANAC

The 1980 Water Use Almanac is divided into two volumes. Volume 1 contains information on the reported amount of water withdrawn by permitted installation. Supporting data on the permittee, the resource, the use type, and the location of the point of appropriation was gathered from the 1980-1981 mailing lists of appropriators and a computer file of permit information. The information is arranged numerically by permit number. In general, three lines of information exist per permit. Missing values are noted by a hyphen (-). For permits that have multiple reports submitted, the three lines of information are repeated for each separate installation without reprinting the permit number. Each line of information will be described in detail.

LINE 1:

PERMIT NUMBER- A six digit number assigned by the Minnesota Department of Natural Resources Division of Waters to each separate permit application received. Prior to 1974, the first two digits of the number corresponded to the calendar year in which the application was made; the final four digits were assigned sequentially. After 1974, the first two digits stand for the fiscal year (July 1-June 30) the application was made; the third digit is the administrative region number; the final three digits are sequential. All numbers listed in this Almanac are for issued applications.

ANNUAL PUMPAGE- The total measured amount of water withdrawn for an installation between January 1, 1980-December 31, 1980. Annual pumpage is indicated in terms of millions of gallons per year. Example: an annual reported pumpage of 1,000,000 gallons for an installation will be recorded as 1.0000.

INSTALLATION NUMBER- A permit may be issued with provisions for one or more installations (i.e. points of withdrawal such as a well, pumping station, or manifolded wells) within a common distribution system. The installation number corresponds to each separate report submitted under a single permit. Where possible the installation numbers represent a description of the source of withdrawal given on the pumping report (i.e. the report is for "Circulating Pump 1" recorded as "CP1" or "Well 5" recorded as "5"). If no description is given, the installation numbers are assigned sequentially starting at "1" and continue through all reports submitted under that permit.

PUMP RATE- The reported pumpage rate in gallons per minute for an installation.

PERMITTED PUMP RATE- The maximum rate in gallons per minute authorized for all installations under permit.

IRRIGATED ACRES- The reported number of acres irrigated per installation in 1980, when applicable.

USE TYPE- The specific activity for which the permit was issued. Appropriation permits are classified by ten types of activity. Both the numeric use type code and a brief description of the activity, enclosed in parentheses, appear in the report. These codes and descriptions are:

- 1 - Waterworks
- 2 - Power Plant
- 3 - Air Conditioning
- 4 - Processing
- 5 - Temporary
- 6 - Level Control
- 7 - Dewatering
- 8 - Wild Rice Irrigation
- 9 - Golf Course Irrigation
- 0 - Other Irrigation

COUNTY- The county number and name of the county, enclosed in parentheses , location of the appropriation.

PUBLIC LAND SURVEY- The township, range, section, quarter section to the nearest ten acres, and government lot location of the point of withdrawal. Quarter sections are reported from largest to smallest quarter by alphabetic code A,B,C,D and correspond to the northeast, northwest, southwest, and southeast quarter respectively.

SOURCE- The source is reported by one of four resource classifications (G,L,S,O) signifying ground water, lake, stream, or other basin and the name of the resource. Examples: a resource reported as L Cedar signifies Cedar Lake and S Cedar stands for Cedar River.

LINE 2:

PERMITTEE- The name of the current permit holder. The permittee may be an individual property owner, a company, or governmental unit.

ADDRESS- The mailing address of the permittee. The address is composed of the authorized agent who should receive correspondence, the "street" address, city, two-letter state abbreviation, and zip code. The mailing address is not necessarily the location of the appropriation site.

LINE 3:

MONTHLY PUMPAGE- The reported amount of water withdrawn in millions of gallons per month for an installation. Example: a reported monthly appropriation of 123,000 gallons is recorded as 0.1230.

Volume 2 of the Almanac includes two appendixes. The first appendix contains several tables of summary statistics, such as frequency distributions of use type and resource type. For example, irrigation accounts for 57 percent of reported water use and almost 64 percent of the reported amount of water withdrawn comes from ground water sources. Tabulations of annual volume by county and use type are also included. The reported amount of water withdrawn, the average amount of water withdrawn and the number of appropriators reporting are calculated for each of the ten use categories within each county. For example, in Ramsey County 21 appropriators used 1611.059 million gallons of water for air conditioning at an average of 76.717 million gallons per appropriator.

The second appendix is composed of three cross-reference tables. A permit number may be referenced by county, public land survey location, or resource name. For example, permit number 710938 is referenced with the permits in Sherburne County, is located in township 33 range 29 section 12, and also appears with the permits whose resource is the Mississippi River. Permits that have missing values for the county, public land survey location, or resource will appear at the beginning of each cross-reference table.
