mary.barrie@state.mn.us

As requested by Minnesota Statutes, section 3.197: This report cost approximately \$21,834.00 to prepare. Nearly all of these costs involved staff time doing outreach to programs to discuss the report, designing the data collection process, collecting the data and following up, analyzing the data and preparing the written report. The cost of district staff time in providing the requested information is not included. It is anticipated that the cost will be less in future years as the report is updated.

Upon request, this material will be made available in an alternative format such as large print, Braille or audio recording. Printed on recycled paper.

Introduction

As we work to close the achievement gap and increase our global competitiveness, we have come to understand that there are different ways for students to be successful in achieving their high school diplomas and preparing for postsecondary and employment. As Minnesota strives to implement the World's Best Workforce goals and provide quality schools for all students, it is clear that some students need a different pathway option than what works for the majority.

The U.S. Department of Education defines alternative education as “schools and programs designed to address the needs of students that typically cannot be met in regular schools. The students who attend alternative schools and programs are typically at risk of educational failure (as indicated by poor grades, truancy, disruptive behavior, pregnancy, or similar factors associated with temporary or permanent withdrawal from school)” (Carver, 2010)ⁱ.

Meeting the needs of students who are unsuccessful or disenfranchised from our traditional schools is critically important as we face a persistent achievement gap and a graduation rate that is currently just under 82 percent. As Minnesota strives for a 90 percent graduation rate by 2020, there continues to be a population of students for whom the status quo has not proven successful. Minnesota has long been a leader in providing multiple pathways and options for students to achieve their high school diplomas-including rigorous coursework and dual credit programs, charter schools, online learning programs and alternative education programs.

Alternative programs are generally characterized by:

- Smaller class sizes.
- Year-round programs.
- More hands-on/experiential approach.
- Focus on individual students' learning styles/needs.
- Independent study options (available for students over the age of 14).

Alternative Education in Minnesota

Legislative Charge

In Minnesota, the purpose of alternative education is defined in [Minnesota Statutes, section 124D.68, subdivision 1](#): “The legislature finds that it is critical to provide options for children to succeed in school. Therefore, the purpose of this section is to provide incentives for and encourage all Minnesota students who have experienced or are experiencing difficulty in the traditional education system to enroll in alternative programs.”

[Minnesota Statutes, section 123A.05, subdivision 1](#), defines the types of alternative programs that Minnesota authorizes:

- (a) A district may establish an area learning center, alternative learning program, or contract alternative program in accordance with sections 124D.68, subdivision 3, paragraph (d), and 124D.69.
- (b) An area learning center is encouraged to cooperate with a service cooperative, an intermediate school district, a local education and employment transitions partnership, public and private secondary and postsecondary institutions, public agencies, businesses, and foundations. Except for a district located in a city of the first class, an area learning center must be established in cooperation with other districts and must serve the geographic area of at least two districts. An area learning center must provide comprehensive educational services to enrolled secondary students throughout the year, including a daytime school within a school or separate site for both high school and middle school-level students.
- (c) An alternative learning program may serve the students of one or more districts, may designate which grades are served, and may make program hours and a calendar optional.
- (d) A contract alternative is an alternative learning program operated by a private organization that has contracted with a school district to provide educational services for students under section 124D.68, subdivision 2.

Additionally, [Minnesota Statutes, section 123A.06](#), states that “a center may also provide programs and services for elementary and secondary pupils who are not attending the state-approved alternative program to assist them in being successful in school.” At the elementary level, these are considered to be Targeted Services programs, which occur outside of the core school day and/or year.

Statute also defines students who can be provided the option of receiving these services. [Minnesota Statutes, section 124D.128, subdivision 2\(a\)](#), states that a State-Approved Alternative Program must provide services to students who meet the criteria in [Minnesota Statutes, section 124D.68](#), and who are enrolled in a district that is served by the state-approved alternative program or who are enrolled in a charter school located within the geographic boundaries of a district that is served by the state-approved alternative program.

During the legislative session of 2013, a provision was added in the law that mandated an annual report for Learning Year programs ([Minn. Stat. § 120B.35, subd. 3 \(e\)](#)). Learning year programs are defined in [Minnesota Statutes, section 124D.128, subdivision 1](#): “a learning year program provides instruction throughout the year on an extended year calendar, extended school day calendar or both.” This is the third annual report in response to the legislation. It is hoped these reports will give an accurate, comprehensive picture of the various learning year programs that exist in Minnesota.

State-Approved Alternative Programs

Many of the programs are located in Intermediate Districts or Educational Cooperatives that have programs in several of their member districts. Also, many districts, such as Detroit Lakes, are contracting with other districts to run programming. In FY 16, these programs had an unduplicated count of 157,231 students, the majority of whom participate solely in out-of-school time learning programs. These occur primarily in after school time and summer time. Targeted Services programs are responsible for 102,391 of these enrollments, a decrease from the nearly 122,000 enrollment records for FY 15. Overall, student numbers showed a slight decrease from FY 15, with a total of 154,994 students. This data is presented in [Appendix B](#).

Minnesota’s State-Approved Alternative Programs are funded with General Education Revenue, and students are eligible to generate up to 1.2 Average Daily Membership (ADM), the basis on which schools generate per pupil funding. These fund out-of-school time programs so that students have the opportunity for the extra time they need to be successful.

Minnesota is unique in the amount of dedicated resources that are placed in these out-of-school time learning programs for at-risk students: very few other states provide such support and often rely on other funding streams such as Title dollars to fund out-of-school time programs. The research is compelling on the need for these out-of-school time learning programs to close the achievement gap. These programs allow students to earn credits they need in order to graduate from high school as well as lessen the opportunity gap that exists between students in poverty and their better-off peers. Programs offering options for students during the core school year have also been shown to benefit students who might not otherwise graduate from high school. According to the National Education Association:

The improved graduation rates have been buoyed not only by support from the Obama Administration and a renewed focus on the importance of achieving a diploma, but also from educators across the country who have spent years fighting to keep at-risk students in the classroom through the implementation of alternative schools.
(<http://neatoday.org/2013/02/11/alternative-schools-raise-graduation-rates/>, 2016)

It is difficult to determine the degree of impact alternative programs have on graduation rates in Minnesota. In some cases, alternative programs do not appear to impact graduation rates due to low numbers; in other cases, the different ways districts calculate graduation rates can affect the interpretation. Graduation rates are based on the number of graduates divided by the size of the cohort group. The last school where a student was enrolled retains that student in its cohort, no matter the length of enrollment. Many alternative schools

experience an increase in the size of their cohort group as students who did not graduate from the traditional high school programs on time transfer to the alternative program and may leave that program without graduating. These students are removed from the traditional school graduation cohort and remain in the alternative school cohort. For those students who do not graduate, this effectively lowers the graduation rate at the alternative program while raising the graduation rate at the traditional high school.

Although the degree of impact can occasionally be difficult to determine, the overall effect of alternative programs on student outcomes is positive. Alternative programs serve difficult-to-reach students and are successful in assisting this population with obtaining high school diplomas.

Minnesota has four basic types of alternative education programs, which are collectively referred to as State-Approved Alternative Programs (SAAPs). All SAAPs are required to be learning year programs. This means that programming of some type must be offered throughout the year. Alternative education programs range in all shapes, types and grade configurations. In Fiscal Year (FY) 2016, there were programs in 136 districts. These are listed in [Appendix A](#).

Area Learning Centers

Area Learning Centers (ALC) provide both core day and extended day/year programs. Many people erroneously refer to these programs as Alternative Learning Centers, but the term “area” has specific significance. These are alternative programs that are meant to be developed cooperatively with at least two districts and that will serve the geographic area of those districts. The exception to this requirement is a district located in a city of the first class: Minneapolis, St. Paul and Duluth. Other requirements to operate as an ALC include the provision that the ALC will offer a comprehensive education program through a school within a school or separate site for students at both the middle school and high school level. There are different benefits to being an ALC. For example, ALCs can provide out-of-school time programs for identified at-risk students who are not enrolled in the core school day program. At the elementary level, these programs are called Targeted Services. ALCs are core school day programs, as well as, extended learning programs.

In FY 16, the number of active ALCs increased to 252 from 239 in FY 15 and the ADM increased from a total of 8,852 to 9,274. Extended time ADMs also increased, going from 2,674 to 2,711.

Alternative Learning Programs

Alternative Learning Programs (ALP) provide both core day and extended day/year programs. They represent the next highest number of core school day sites but are actually the smallest programs in terms of number of ADMs generated. ALPs are not required to be operated in conjunction with another district, nor are they required to serve both middle school and high school students. ALPs can focus on one specific need, for example, students identified as having chemical dependency issues. ALPs can specify the grades they serve and can determine program hours. They can offer programs outside of the core school day and year, generating additional revenue.

There were 50 active ALPs in FY 15 with 5,562 enrollment records. In FY 16 this increased to 51 ALPs with 5,072 enrollment records. The ADMs generated declined, going from 748 ADMs in FY 15 to 697 ADMs in FY 16. Extended time ADMs also declined from 333 to 291. This decline is attributed to fewer enrollment records.

Targeted Services Programs

Targeted Services (TS), an ALC program, provide extended day and extended year programs only. Without broad policy or implementation recommendations to guide programs, there is a wide range in program focus, time, and duration. For example, summer program durations range from three to 40 days. The hours per day also range from one hour per day to seven hours per day. Afterschool programs during the core school year range from one hour per day to three hours per day and from one to four days per week.

Minnesota has recognized the need to offer TS for at-risk elementary students and provides resources to support these programs. The extended-time funding that exists for at-risk students is a critical component for students living in poverty and exhibiting the risk factors as noted in legislation. The research supporting this is discussed on page 10 of this report.

TS programs increased from 242 in FY 15 to 251 in FY 16. There were 121,895 enrollment records in TS programs for FY 15. This decreased to 102,391 in FY 16. Unlike ALCs, TS programs can only generate funding outside of the core school day. TS programs still generate ADMs, and funding fell slightly from 366 in FY 15 to 357 in FY 16. The extended ADMs fell from 8,394 to 8,279 in FY 16.

Contract Alternative Programs

Districts may also choose to contract with outside agencies to provide education services for students that are identified as at-risk. Currently, there are only two districts in the state using this model. Enrolled students remain students of the district that holds the contract; however, the staff members are generally non-district employees. These schools do not qualify for lease aid and must pay those expenses, if any, out of the dollars they receive for the education of their students.

Saint Paul Public Schools has one Contract Alternative Program (CAP), and Minneapolis Public Schools has 16 CAPs although several of these are the extended time programs for the core school day. While there are only 17 of these programs in total, they generated slightly more ADMs than ALPs and had 1,438 enrollment records in FY 16 compared with 1,705 enrollment records in FY 15. Their ADMs in FY 15 were 992, and they fell to 719 in FY 16.

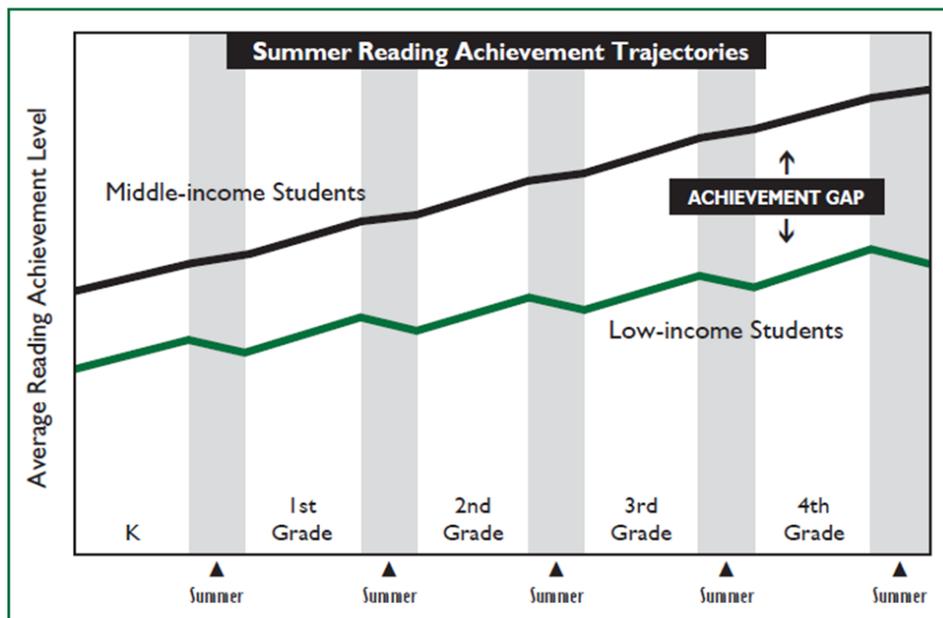

Instructional Delivery Models

Summer Programs

A large percentage of students are enrolled in alternative education programs during the summer. It is a time of opportunity for students who struggle, particularly students in poverty, to receive supplemental instruction. Despite mounting research demonstrating that summer programming is a key to closing the achievement gap, districts struggle financially to provide summer programming without using extended-time funding as the main funding source. According to RAND researcher Jennifer McCombs, "...despite long-term efforts to close the achievement gap between disadvantaged and advantaged students, low-income students continue to perform at considerably lower levels than their higher-income peers, particularly in reading. Instruction during the summer has the potential to stop summer learning losses and propel students toward higher achievement" (Release, Investment in Summer Learning Programs Can Help Stop the "Summer Slide", 2011).

In 2011, a comprehensive analysis was published by the RAND Corporation. Based on this information, McCombs and colleagues concluded that while overall elementary students' performance falls by about a month during the summer, the decline is far worse for lower-income students. Perhaps more importantly, their report shows that summer learning loss is cumulative and contributes substantially to the achievement gap. They concluded that efforts to close the achievement gap must not be applied to the core school year alone in order to be successful. (McCombs J. A., 2011)

This research confirms previous reports on the impact of the summer learning loss. The cumulative summer learning loss for a student in poverty and a middle income student is depicted in the following chart:

(Fairchild, 2006)

In September of 2016, RAND Education documented the results of a multi-year research effort, funded by the Wallace Foundation. This research found that high attenders in the first summer had a statistically significant increase in mathematics from the program that carried into the assessment tests given the following spring. The research is not as clear on the benefit of attending multiple sessions as nearly half of the students who were accepted in the first summer did not repeat the second summer. Therefore the size of the data pool did not allow for clear conclusions to be made. However, the researchers do state that “the sum of evidence makes it likely that the academic results are due to participation in the summer learning program”. (Augustine, 2016)

Core School Day Programs (Academic Year)

Most core school day programs are ALCs, followed in number by ALPs and then CAPs. While there are fewer CAPs than ALPs, slightly more students are served in them. These programs are described in more detail in the following section.

While the majority of students who access SAAP programs do so in out-of-school time programs, many core school day programs exist. In core school day programs, students are required to meet at least the state graduation requirements and must have the same amount of educational time as students in the traditional program.

Some districts are not providing the statute-mandated minimum number of 1,020 hours of core school day programming for students at their traditional high schools. This can occur when they either do not schedule enough hours or because their students miss school due to snow days or other unforeseen school closures. The state pays for this required minimum number of hours and will not pay for any extended hours until the student has received this minimum amount of time. For example, if a district had a core school year length of 1,002 hours, the district would be 18 hours short of the minimum required. Therefore, to address the shortage, the first 18 hours a student generated in the out-of-school program would not generate funding. The extended program, even though they incurred costs for serving the student in the first 18 hours, would not generate any revenue until the 19th hour.

There were some districts that provided a shorter core school day at the alternative program due to transportation issues. For example, in some cases, all students arrive and depart from the traditional high school and then are transported to and from the alternative school site, which consequently shortens their instructional time, thus the amount of hours spent in their core school day.

Extended Day Programs (Academic Year)

The legislature has provided funding for SAAP’s to offer additional programming during the core school year. These could be extended day, extended week or programs that occur during school breaks. It is difficult to determine which programs occur during the core school day and which occur outside of the core school day. There is no separate designation required for extended time programs at the secondary level. Many districts use the same school code for all of these programs. Because of this, we are unable to determine when during the day or week students are in extended time programs.

Additional Pathways for Alternative Education Students

Early/Middle College Programs

Legislation was passed in 2014 that provides students in SAAP's the possibility to leverage the Postsecondary Enrollment Options (PSEO) opportunities in a new and unique way. Early/Middle College (EMC) programs were added to [Minnesota Statutes, section 124D.09](#), and allow alternative program students to take college courses, including developmental coursework. Developmental classes are for students who have not yet achieved the level of academic skill needed to take college level courses. Students earn a high school diploma while also earning postsecondary credits towards a degree or credential including a certificate, diploma, or an associate's degree. This program allows students to earn up to two years' worth of credit towards a Bachelor's degree. The EMC legislation provides opportunities to over-age and under-credit youth. These students are now able to earn both high school and college credit in a supported learning environment with age-appropriate peers.

Also unique to this program is the strong partnership it forges between the alternative school, the district, and the college. Students must choose a program of study they will undertake with specific courses set out in a clear timeline. Students are supported by educators from across the spectrum, including counselors, teachers and college instructors. Examples of career pathways include Welding, Health Care Assistant, Early Childhood Education, Administrative Assistant, Human Resources, and many others.

Partnerships must submit an application to Minnesota Department of Education (MDE) for approval. The application and approval process is open each year for new partnerships. EMC programs were first approved during the second semester of FY 15. FY 16 was the first full year of the program. The number of programs increased from eight in FY 15 to 65 approved for the 2017-18 school year.

Minnesota Department of Education was fortunate in FY 16 to be able to collaborate with an outside research organization on two projects around EMC programs. They attempted to answer:

- What are the major successes of the program to date?
- Are there challenges to aligning college credits earned with high school graduation requirements? What strategies have SAAPs used to overcome these challenges?
- Has participation in the program fostered a college-going culture? If so, in what ways?
- How do SAAPs support students who participate in the program?
- What successes and challenges have SAAPs experienced in collaborating with postsecondary institutions?
- What additional challenges have SAAPs and postsecondary institutions experienced during the implementation of the program?

Many of the things they found were somewhat typical such as the need for supports at both the alternative program and the college. Also clear was the positive impact on students and the value of being in the program. What was perhaps unexpected was the impact the program had on students who were not in the program, the staff at the alternative school and the local community. For many programs, the culture of the entire school changed to be more aspirational in that students who had not thought of themselves as ever being college

students saw students like them doing just that, and it gave them the belief that they could do it as well. Staff felt an enormous amount of pride in their students and in the programs. The community began to view alternative programs as places of success, where they wanted their students to attend rather than places of last resort.

Noted factors of major success of the programs were:

- Increased self-confidence. Many students in SAAPs have not experienced success in traditional programs. In every focus group, participants noted this.
- Improved college readiness. Because of the way the EMC program is structured, students are exposed to the expectations of being college students and this, combined with the supports given by both the SAAPs and the colleges, helped to prepare them to be successful. It was important to do this as so many students had experienced repeated failure.
- Improved college outcomes. Study participants spoke of students outperforming expectations.

The challenges noted were:

- Credit accrual policies. In some instances, aligning college credits with district credit requirements for completing a high school diploma was difficult.
- Course difficulty. Credits needed for graduation such as mathematics and science credits were difficult to attain at the college level because some of the students' skills didn't match the rigor of college courses offered (Proger, et. al., 2016).

Standard Adult Diploma Program

There are a number of Adult Basic Education (ABE) programs that are co-located with ALPs. This partnership creates efficiencies by leveraging resources and facilitating credit completion for ABE participants who are working on completing the credits to earn high school diplomas and provides for a smooth transition to participation in the Standard Adult Diploma for students who have aged out of SAAP programs. The Standard Adult High School Diploma is available in 24 of Minnesota's 43 consortia.

Secondary credentials are important to adult success in postsecondary education, training, and careers. Such credentials provide a gateway for entry into the workforce, to postsecondary education and to participate as active and contributing community members.

Prior to implementation of the Standard Adult Diploma, if an adult in Minnesota wanted to earn a high school diploma, he/she had two options: returning to a high school program if his/her age permitted or earning a GED® diploma. In FY 14, the vast majority of adult learners who earned their diplomas did so through the GED®, compared to earning a high school diploma. This new third option, the Standard Adult Diploma Program allows adults in Minnesota who do not have either a high school diploma or a GED to earn a competency-based diploma. Many of these adults possess the same risk factors as students in alternative programs. The Standard Adult Diploma was piloted in the spring of 2015, and has now been fully implemented in ABE programs serving a majority of Minnesota's adult learners.

Data Collection and Analysis

Several methods were used to gather information for this report. For the first annual report in 2015, surveys were sent out to programs to determine their outreach to students who had left school, their intervention and prevention strategies and how well prepared they felt their students were to meet career and college readiness benchmarks. The department asked secondary programs to report on the credits that were earned by students in their programs. The information for the demographic charts and for the graduation rates was sourced from the MDE website.

The 2017 data requests listed below met the response rate needed for establishing statistical reliability within a 95 percent confidence level and a 5 percent confidence interval. Also included are the charts for the 2015 and 2016 data requests, where all information was collected initially through surveys and the data request for credit information. This chart indicates the categories of information requested and the number of districts invited to participate, the response rate needed to establish reliability of data, and the number and percent of actual respondents.

2017 Collection Method	Number of districts invited to participate	Response rate needed	Number and percent of actual respondents
Credits Earned Data Request	N=131	N=100	N=113 (86.2%)

2016 Collection Method	Number of districts invited to participate	Response rate needed	Number and percent of actual respondents
Credits Earned Data Request	N=136	N=101	N=128 (94.1%)

2015 Collection Method	Number of districts invited to participate	Response rate needed	Number and percent of actual respondents
Surveys	N=19	N=14	N=19 (100%)
Update on Individual Sections	N=136	N=101	N=105 (77.2%)
Credits Earned Data Request	N=136	N=101	N=128 (94.1%)

Demographic Data: Area Learning Centers, Alternative Learning Programs, Contract Alternative Programs

Overall across the state, 48 percent of students in SAAPs are students of color compared with 29 percent of students in non-SAAP schools. Students in SAAPs are more likely to be students in need of English Learners (EL) services and more likely to be in need of Special Education services. Students in these programs are 60 percent more likely to be on free or reduced-price lunch than are students across the state. For ALCs, ALPs and CAPs, students are most likely to be in their fourth year or beyond of high school, followed by students in their third year. Students in their fourth year or beyond of high school make up nearly 70 percent of the students in ALCs, ALPs and CAPs.

The following charts show the demographic makeup of students in the State-Approved Alternative Learning Year Programs. Unless specifically stated, none of these include the Targeted Services programs. These programs, by definition, are not operated during the core school day. Refer to [Demographic Data: Targeted Services](#) for this information.

Ethnicity

Up until FY 16, data for ethnicity was collected based on the following five categories:

- American Indian (AMI)
- Asian/Pacific Islander (API)
- Hispanic (HIS)
- Black (BLK)
- White (WHT)

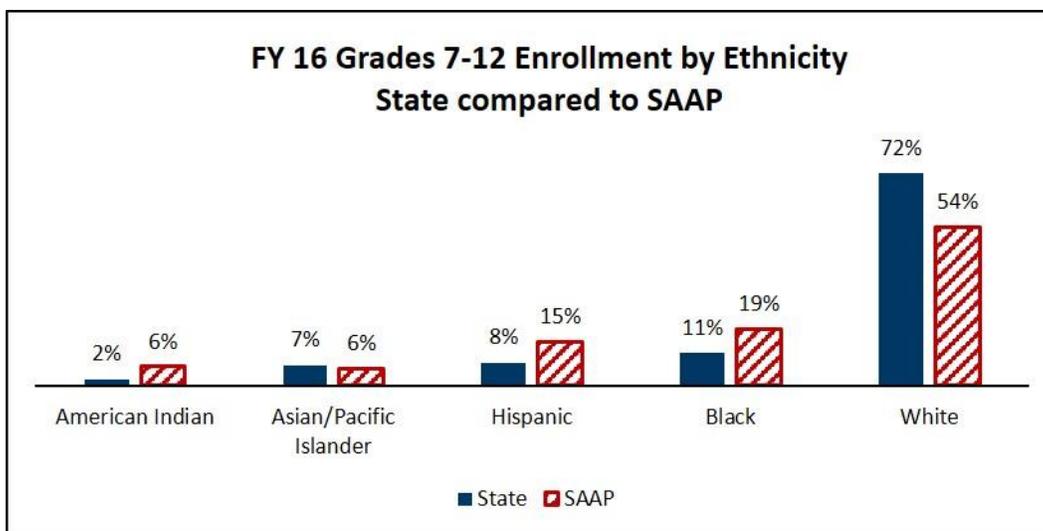

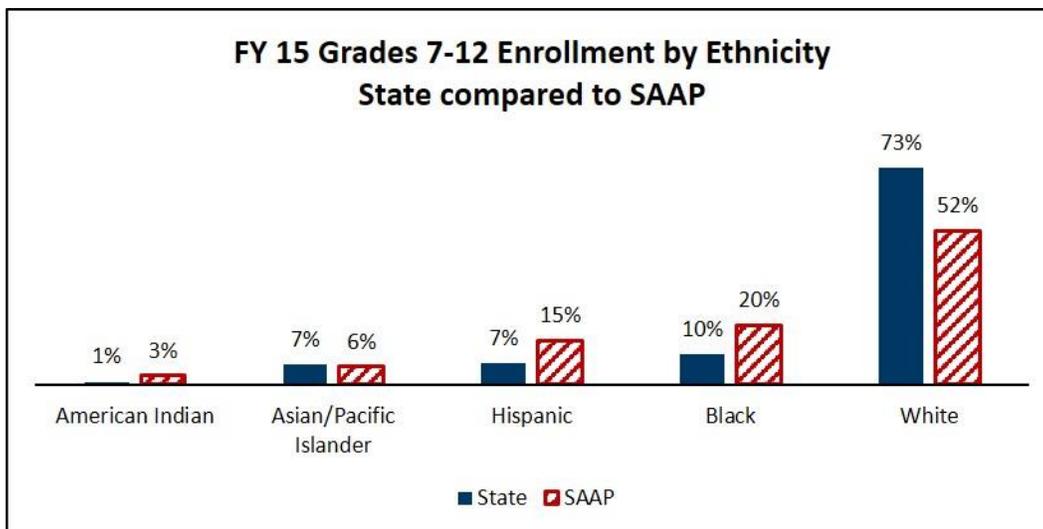

For FY 17, the Minnesota Report Card is using the following seven categories:

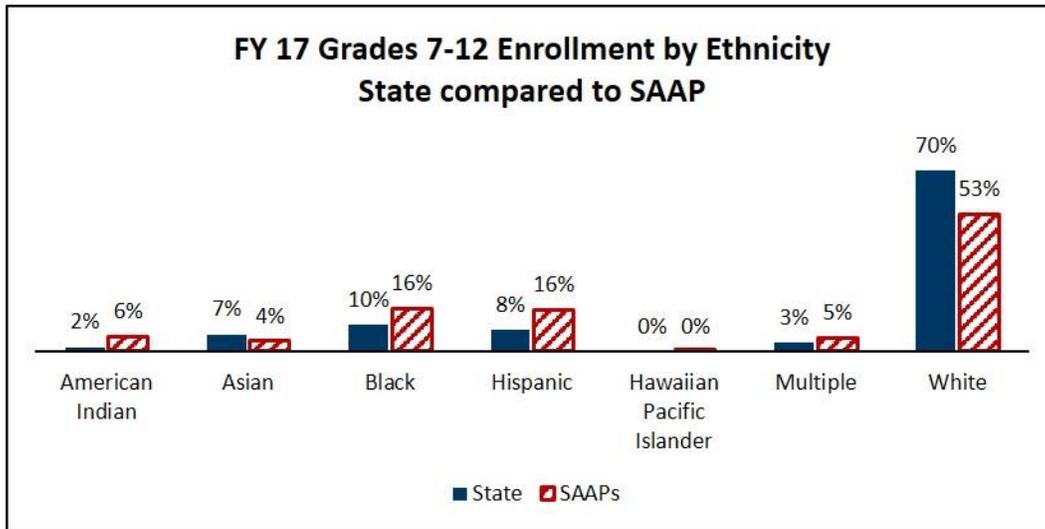

- American Indian (AMI)
- Asian (ASI)
- Black (BLK)
- Hispanic (HIS)
- Hawaiian/Pacific Islander (HPI)
- Multiple/Two or More Races (MLT)
- White (WHT)

Ethnicity: State compared to SAAP

Overall, the SAAP student demographics vary greatly from the state student demographics. In comparison with state demographics, SAAPs have approximately three times the percentage of Native American students, a slightly lower percentage of Asian/Pacific Islanders, and approximately double the percentage of Hispanic students and Black students. SAAPs have only two-thirds as many white students as the state average. The

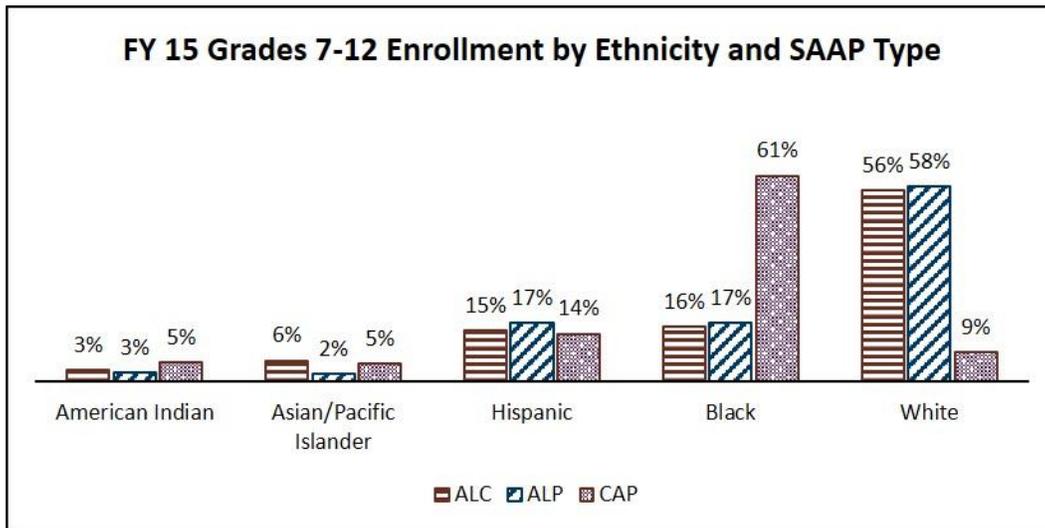

source of the data was the MDE website. Data is included from FY 15 to FY 17 although it is difficult to make a longitudinal comparison as the ethnicity categories have changed.

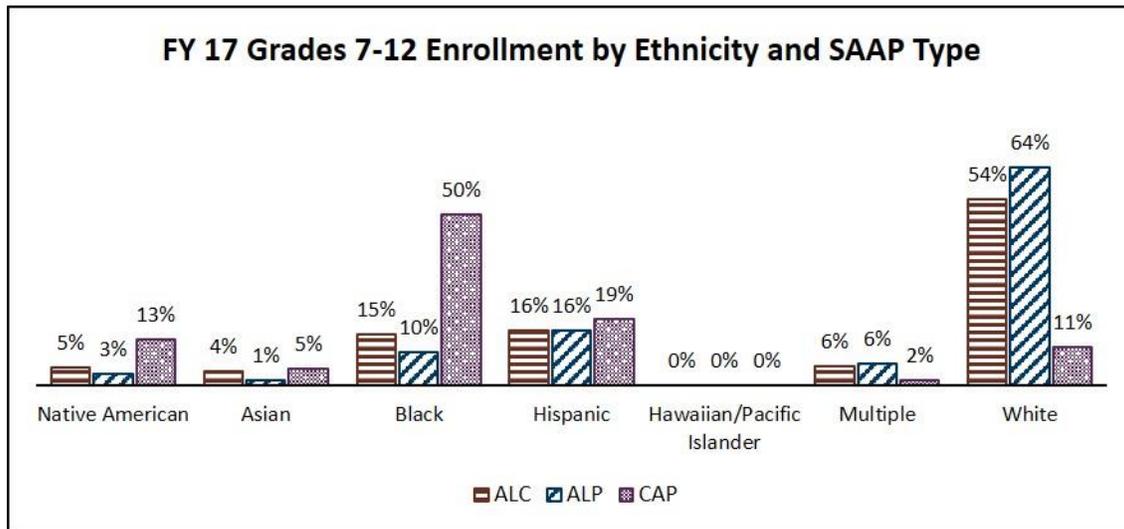

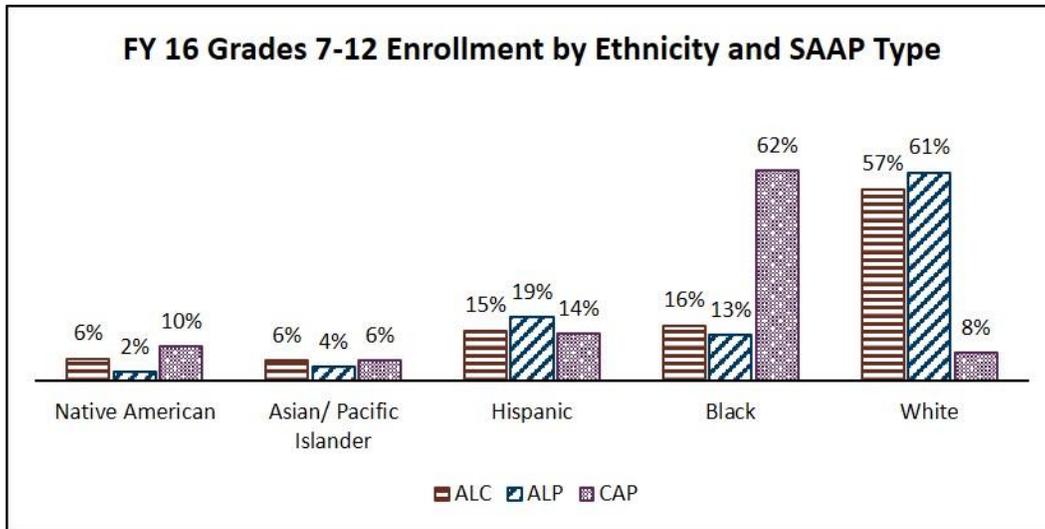

Ethnicity: by SAAP Type

Statewide demographics for SAAPs give an overall picture, but one can also look at the varying demographics by SAAP type to get a clearer picture of the students they serve. For example, CAPs have a higher percentage of Native American and Black students than either the ALCs or the ALPs. ALCs are approximately 61 percent White, and ALPs are nearly 50 percent White. CAPs enroll less than 10 percent white students. The following charts show Grades 7-12 enrollment by ethnicity in the three types of SAAPs from FY 15 to FY 17.

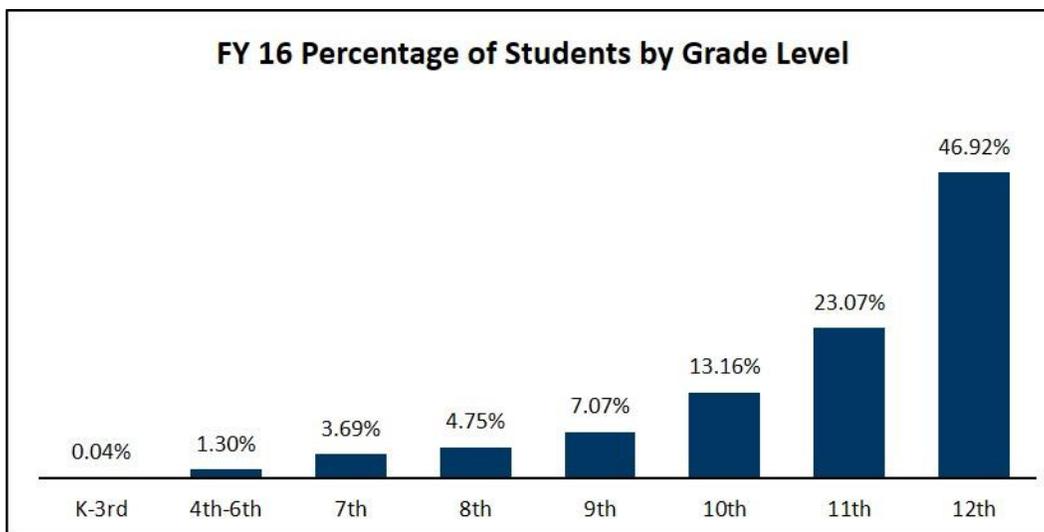

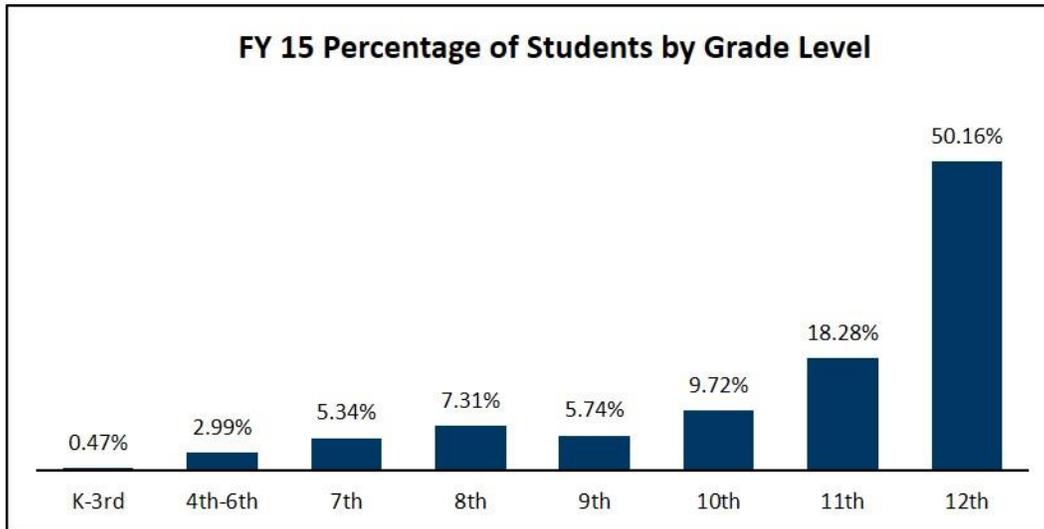

Grades Served

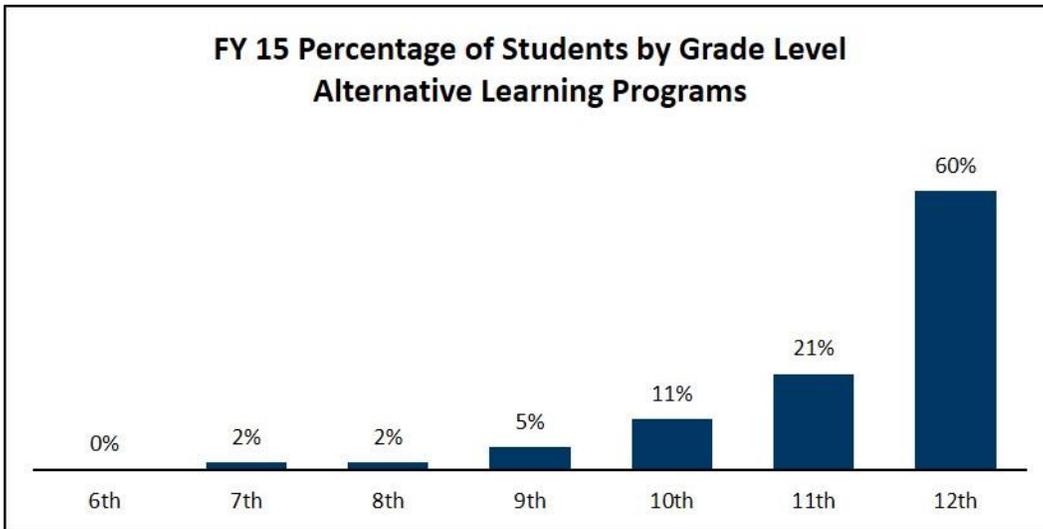

Historically, Learning Year Programs focused on secondary, specifically high school students. Over time, services were expanded to other grades. Most notably, out-of-school time TS programs enroll elementary students. For core school year programs, the only current programs serving elementary students are CAPs located in Minneapolis. Overall, the largest group of students served in SAAP's are twelfth-graders and students who are in their fifth, sixth or seventh year of high school; however, this percentage is changing. In FY 15, twelfth-graders made up the majority of students. In FY 16 this shifted. Overall, including both regular and extended ADMs, the percentage of twelfth-grade students served was 43 percent. The percentages of eleventh-grade students served increased from 18 percent in FY 15 to 24 percent in FY 16. For FY 16, the percentages are listed for regular ADMs only, for extended ADMs only, and for combined regular and extended ADMs.

Grades Served: State

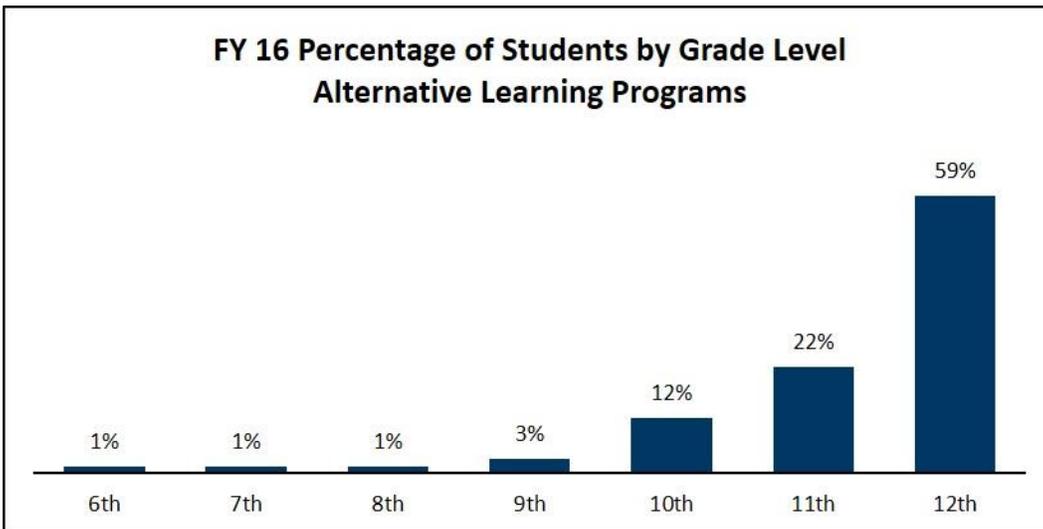

Grades Served: by Program Type

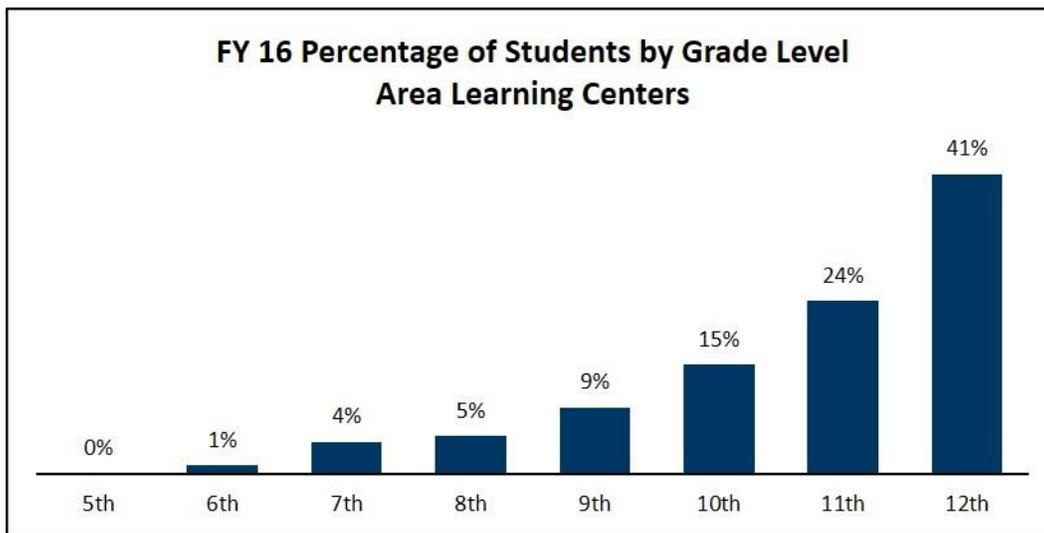

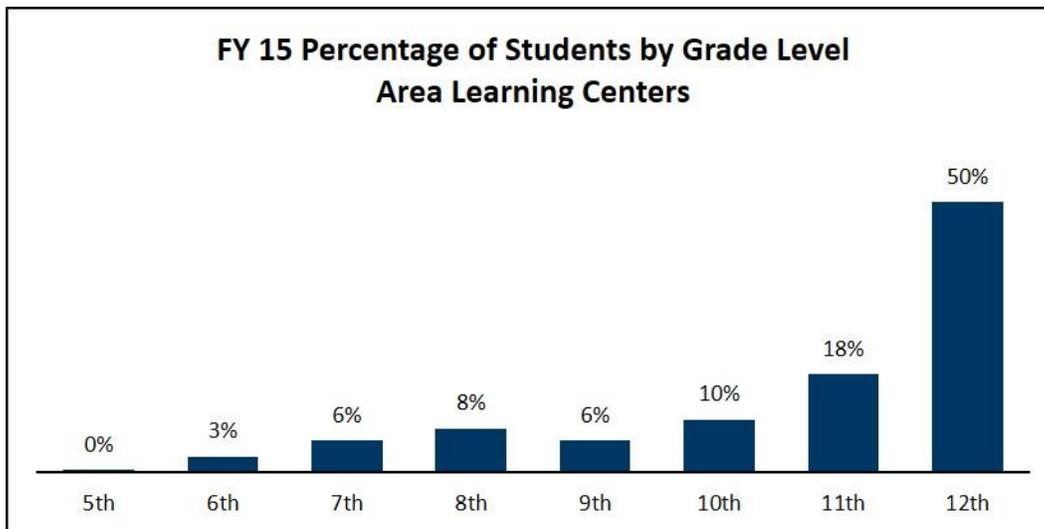

The percentage of students in SAAP's who are 12th grade and beyond has been around 50 percent state-wide for several years. For FY 15, the percent of students in ALPs who were twelfth-graders was 60 percent while the percent that were eleventh-graders was 21 percent. In FY 16, this percentage was approximately 47 percent. In FY 15, 96 percent of the students in ALPs were high school students.

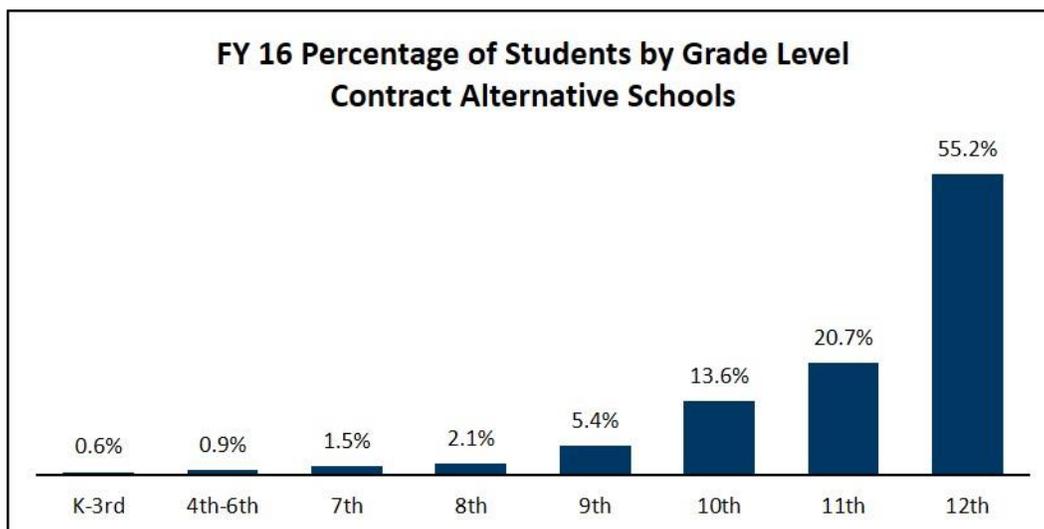

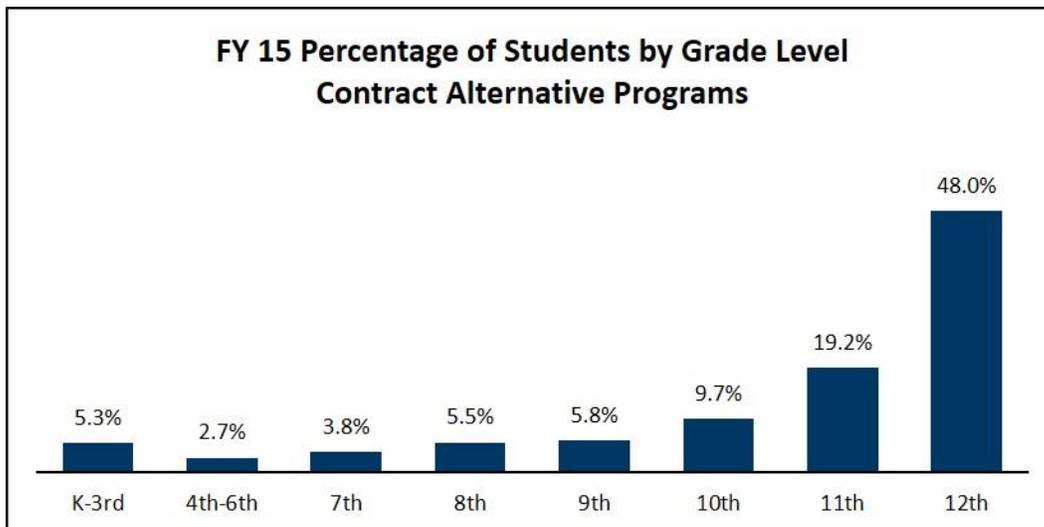

In FY 16, the percentage of students served in alternative programs in the twelfth grade fell slightly and the percentage of eleventh-graders rose slightly. Between both eleventh and twelfth grades the percentage of students served remained at 81 percent. Overall, 97 percent were high school students.

In ALCs, half of all students were twelfth-graders during FY 15. In FY 16, this had dropped to 41 percent. Overall, approximately 65 percent of the students were high school juniors and seniors, and the remaining were middle school students. ALCs are required by statute to serve both middle school and high school so it is not surprising that there is a larger percentage of middle school students than either of the other two program categories. This percentage was 41 percent in FY 16 while the percentage of eleventh-graders was 24 percent in FY 16. The following charts show the percentage of grades served in ALCs for FY 15 and FY 16.

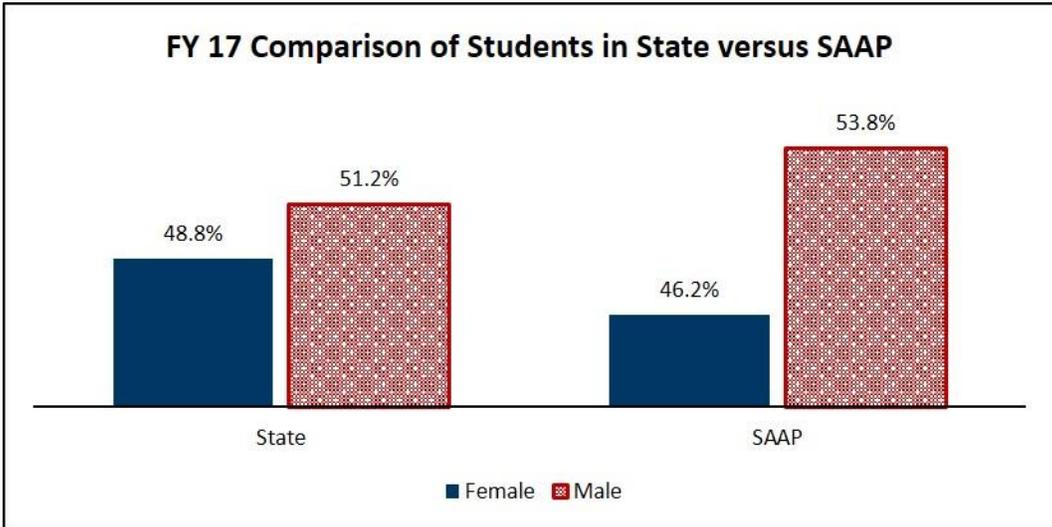

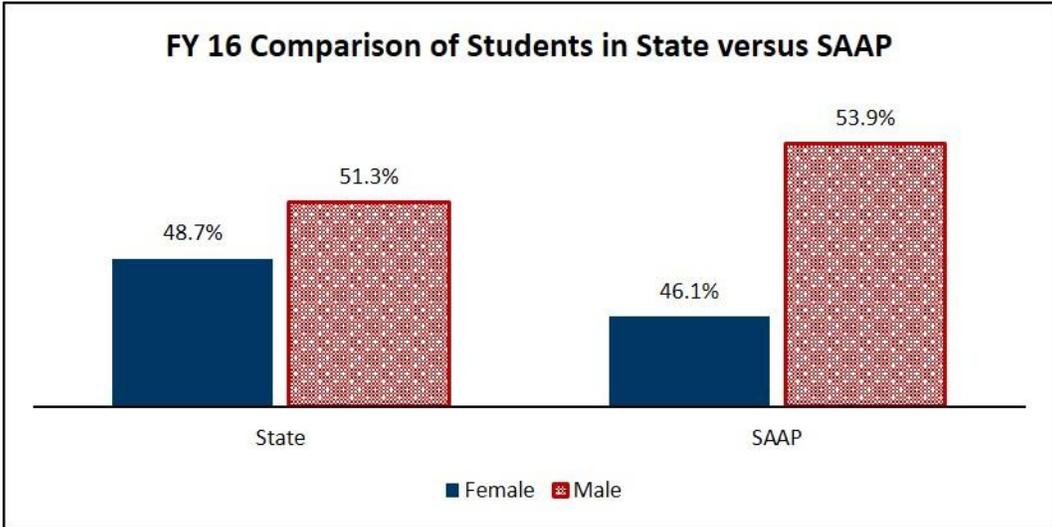

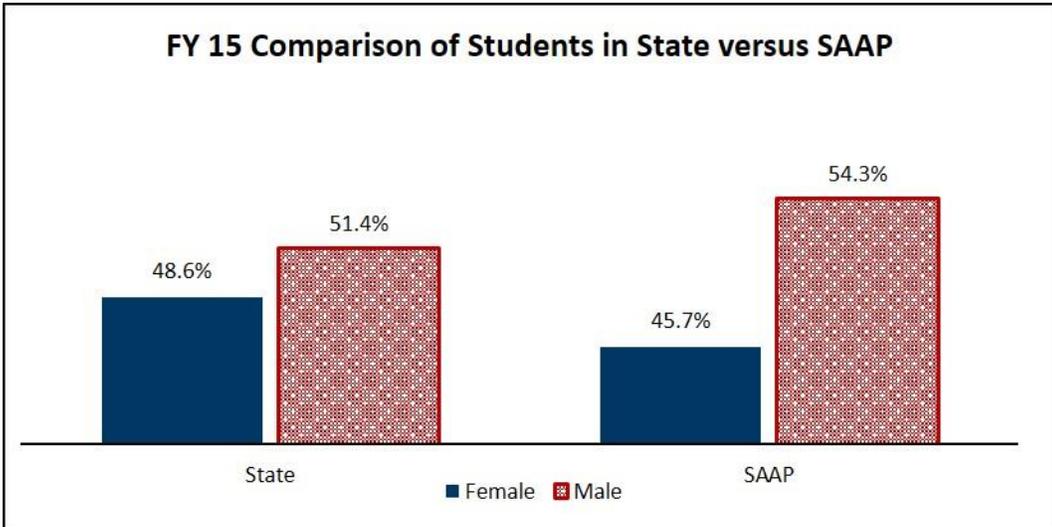

Similar to ALCs, 48 percent of all students in CAPs were twelfth-graders in FY 15. This number increased to 55 percent for FY 16. The percentage of eleventh-graders for FY 15 was 19 percent. For FY 16 it was nearly 21 percent. Tenth-grade students also increased for FY 16, going from just under 10 percent in FY 15 to 13.6 percent in FY 16. The elementary grades fell slightly for FY 16.

Gender

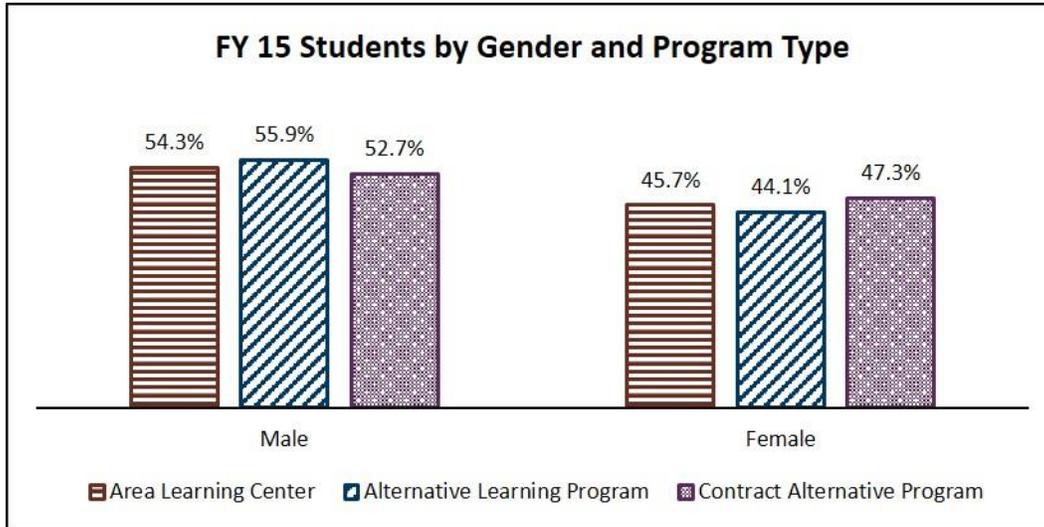

Gender: State versus SAAP

For the last several years, Minnesota had a slightly higher percentage of males than females in public schools. Over the same time, SAAPs also have a higher percentage of male students, but the differences between males and females is greater in SAAPs than it is statewide. There are approximately 20 percent more males than females in the learning year programs. In FY 15, FY 16 and FY 17, the percentages were very similar.

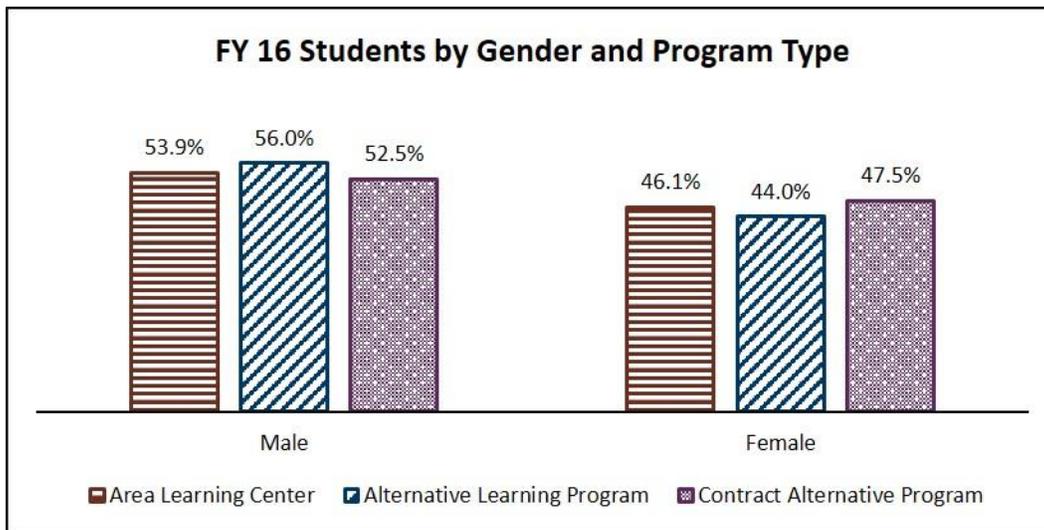

Gender: by SAAP Type

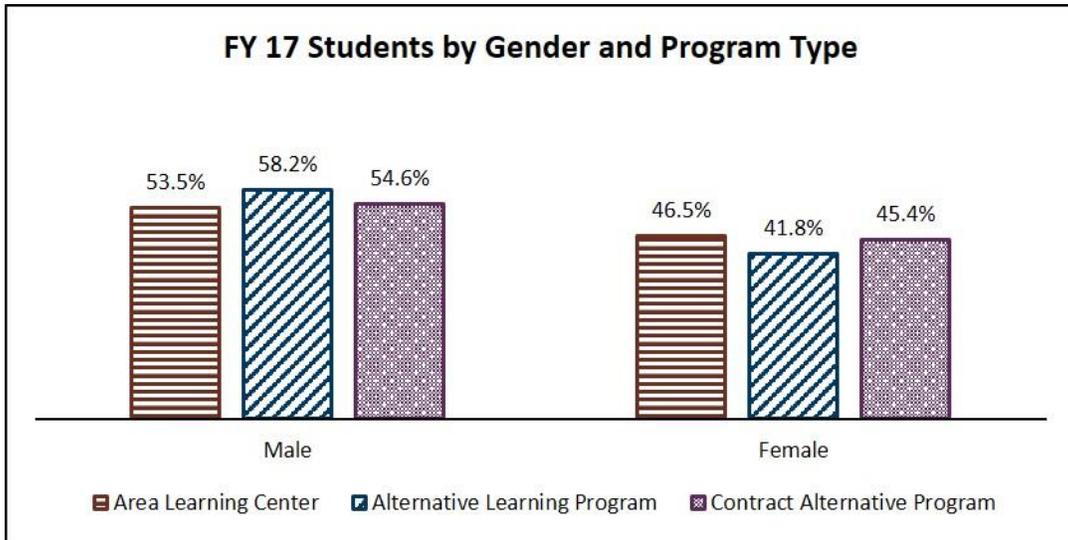

The following graph shows three different SAAP program types and the percentages of rates of male and female students.

In FY 16, both ALPs and CAPs reflected nearly identical percentages from the year before. ALCs were also close but show a slight decline in the percentage of male students and an increase in the percentage for female students.

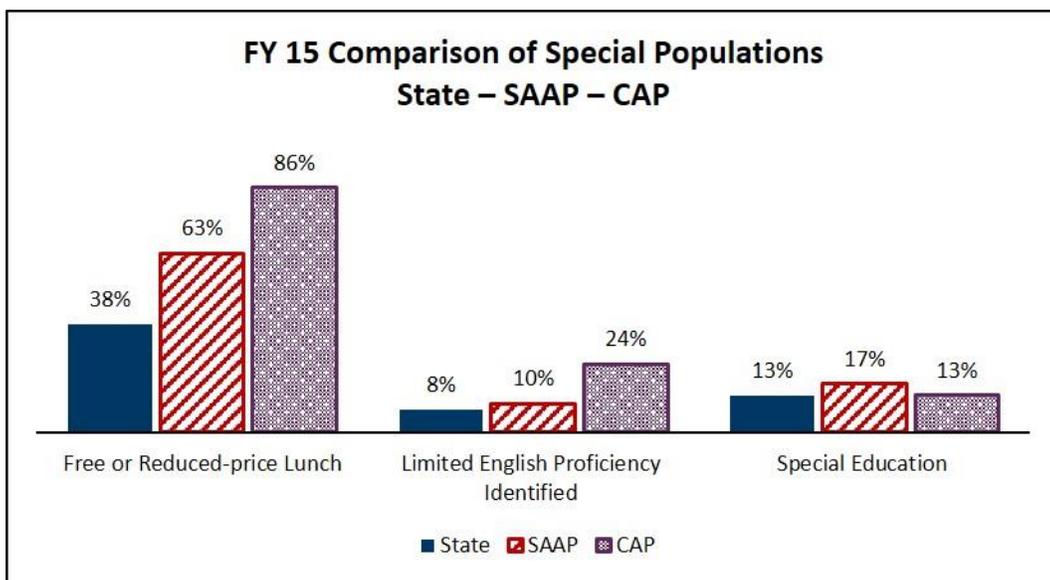

The slight decline in percentage for male students in ALCs continued in FY 17, while both ALPs and CAPs saw a 2 percentage point rise for males.

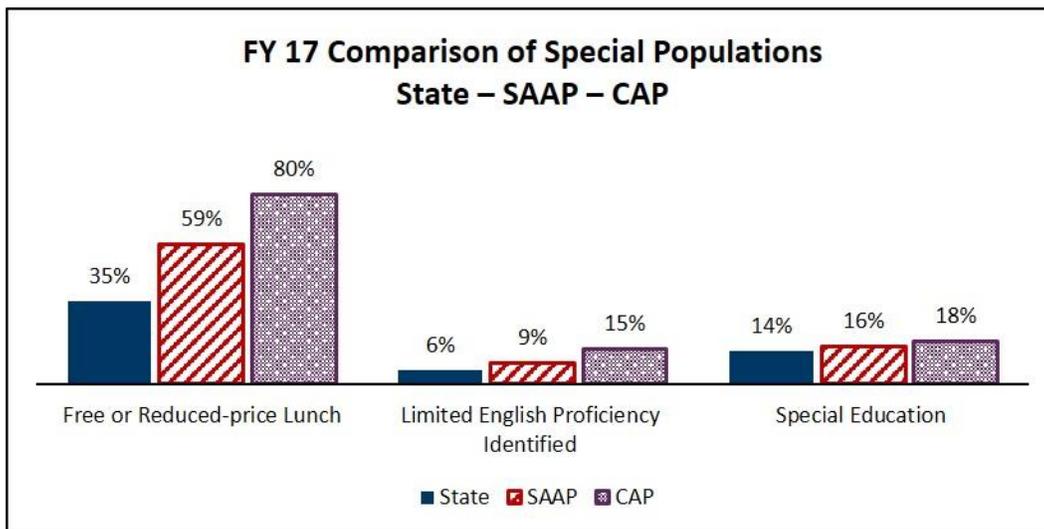

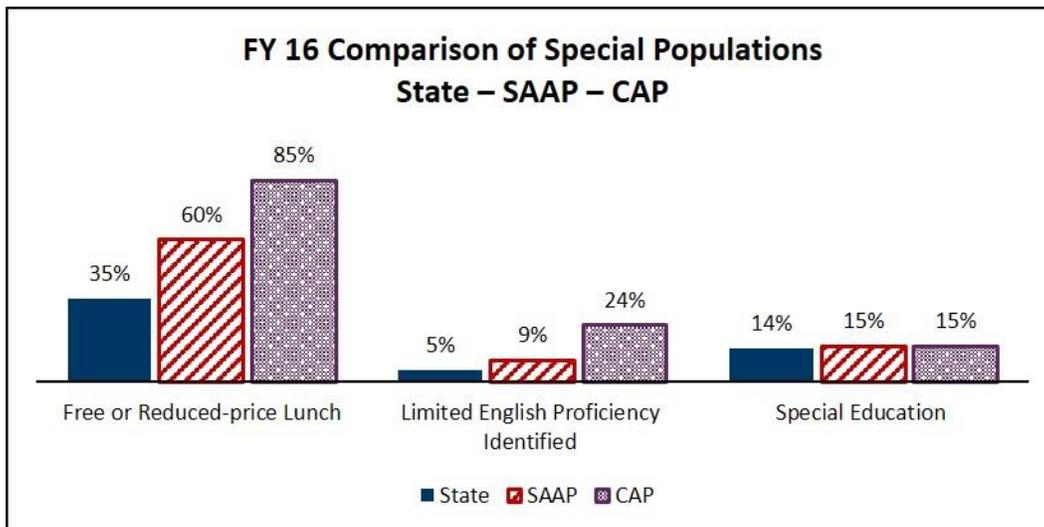

Special Populations

Students in special populations tend to make up a greater percentage of students in alternative programs as compared with the state. In comparison to the statewide free or reduced-price lunch rate, 63 percent of SAAP students qualified for free or reduced-price lunch in FY 15. Approximately 10 percent of SAAP students were identified for EL services and 17 percent of students in SAAPs received special education services.

Eighty-six percent of CAP students qualified for free or reduced-price lunch. Twenty-four percent of CAP students were identified for EL services and 22 percent of CAP students received special education services.

In FY 16, the percentages of students identified as special education was nearly identical to the state for both SAAPs and CAPs, but the differences in percentages began to widen again in FY 17. The disparity remains between the percentages of students on free or reduced-priced lunch between the state and the SAAPs as well as for students identified with Limited English Proficiency.

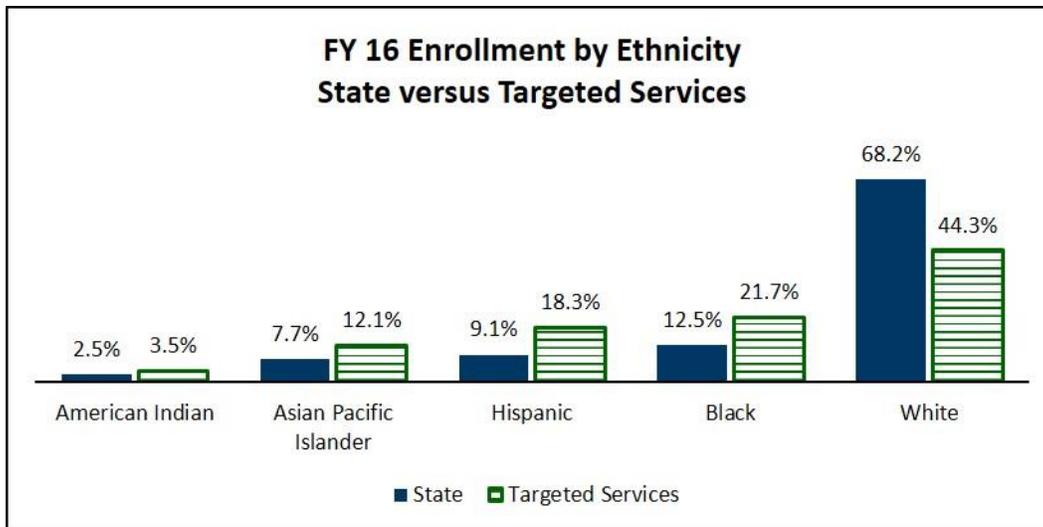

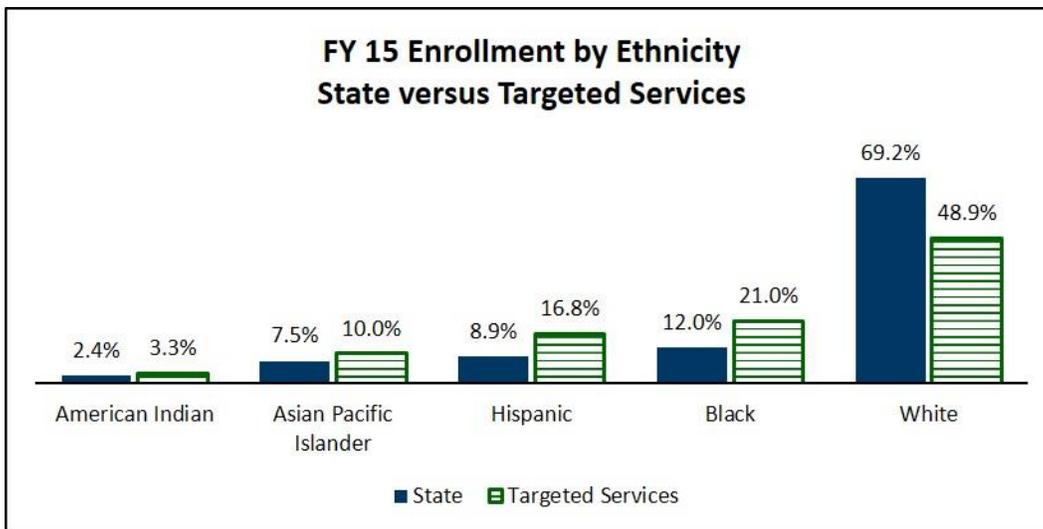

Demographic Data: Targeted Services

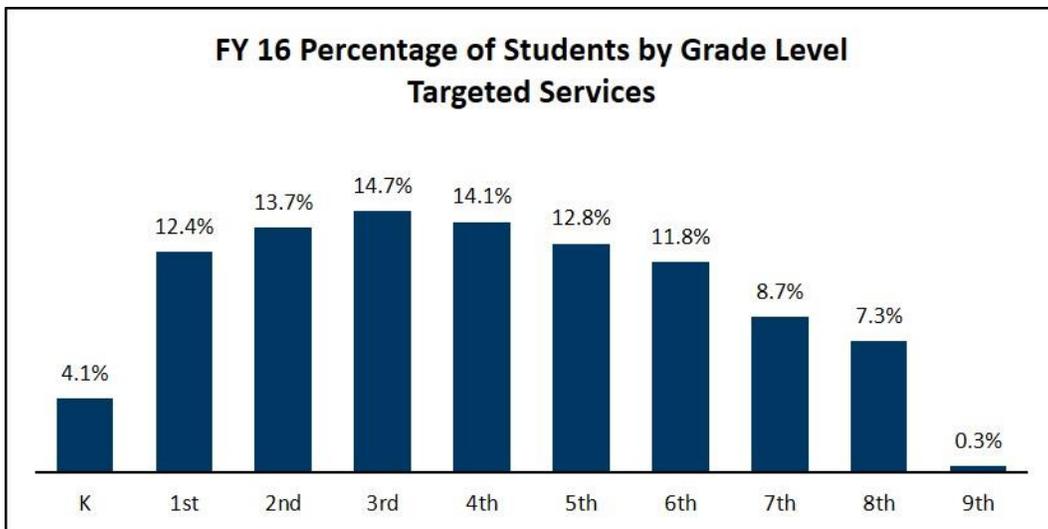

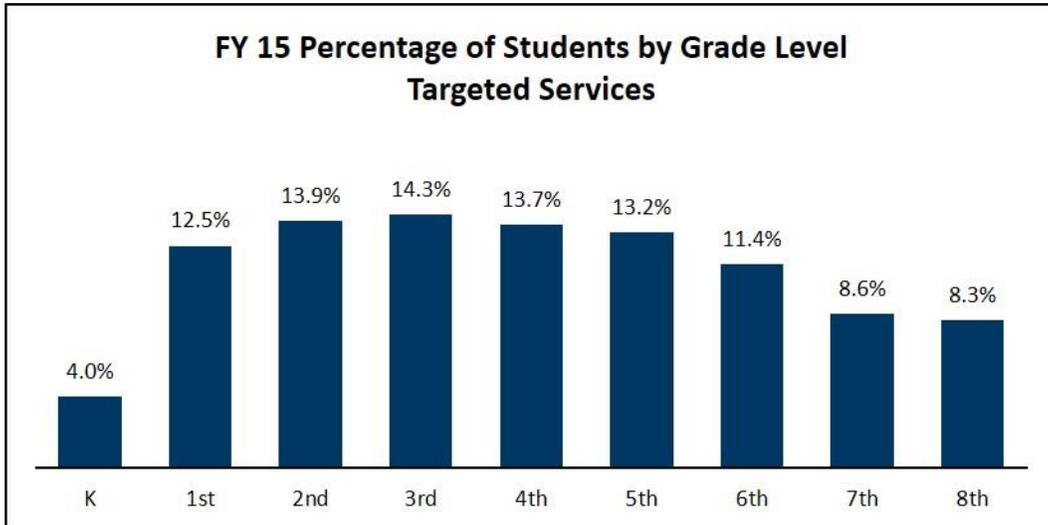

Ethnicity

Ethnicity: State vs. Targeted Services

For FY 16, MDE was able to pull data in the fall of 2017. This will provide a good indication of the demographics of the TS programs. In FY 15, the percentage of students of color in TS programs was 51 percent. At a state level, just over 30 percent were students of color. For FY 16, we see the percentage of students of color continue to rise, with slightly over 55 percent being students of color.

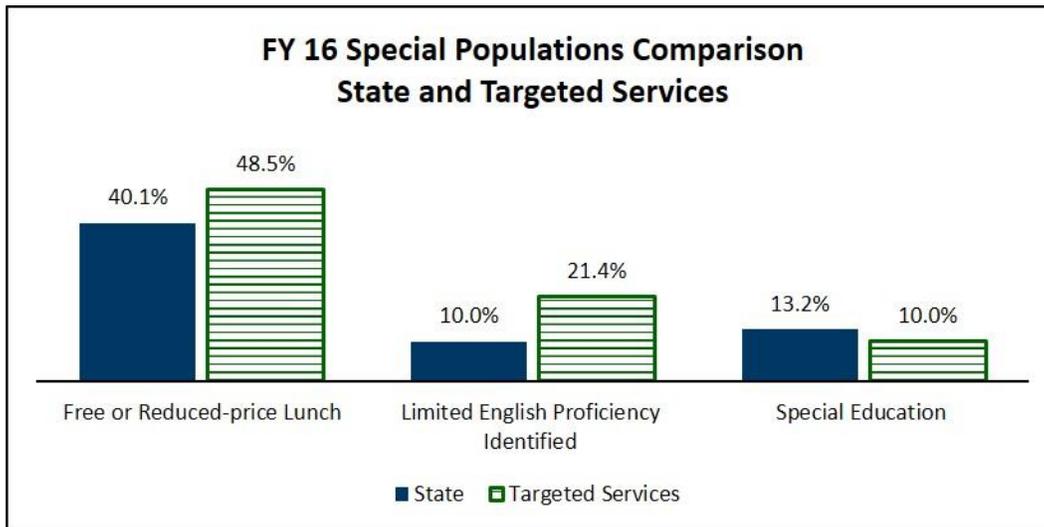

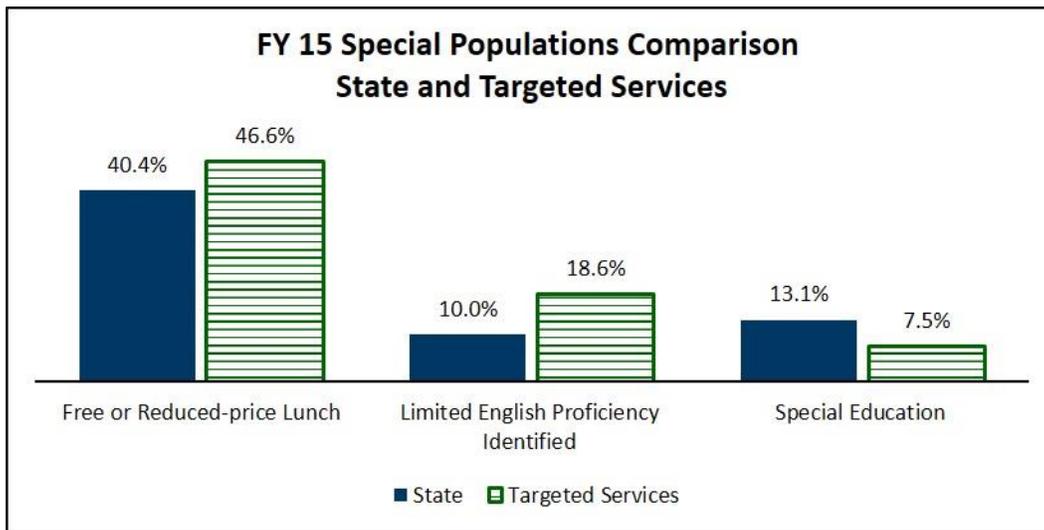

Grades Served

Special Populations

In FY 15, there were nearly twice as many students who qualified for EL services in TS as there were statewide. In FY 16, the percentage of students identified as being in need of these services was over twice as high as it was state-wide. In FY 15, there were 15 percent more students in poverty than there were in the state as a whole. In FY 16, this increased to show 20 percent more students in poverty than there were at the state level. In FY 15, the percentage of special education students across the state was 13.1 percent but only 7.5 percent in TS programs. While the percentage of students in special education state wide remained fairly consistent for FY 16, the percentage of students identified as special education increased to 10 percent in FY 16.

Credits Earned

In order to address the effectiveness of programs, districts were asked to supply the number of credits students earned in their programs. The department compared this with the membership hours submitted to obtain an average number of membership hours submitted for each full credit earned. Because the amount of credit awarded for the same class varies from district to district, further analysis was needed.

Some districts award a full credit every quarter, trimester, semester or year for the same course. For example, some districts give 24 credits a year and require 96 credits to graduate. Some districts give six credits a year and require 24 credits to graduate. Yet, the students in alternative learning are fulfilling the same graduation requirements as their district requires. To address this, each district's graduation requirements and length of school year were calculated. Then the number of credits students needed to earn per year in order to graduate on time with their peers was calculated. Finally, that number of credits was divided into their length of school year to arrive at an anticipated number of hours students needed to earn a full credit. A major assumption was that all students would be earning the full amount of credit.

The number of membership hours the SAAP submitted was then compared to the anticipated number of hours needed for a credit in the traditional program in the district. This information is provided in [Appendix F](#).

There were a few challenges in doing this. Some Intermediate and Cooperative ALCs are providing programs to multiple districts and do not themselves graduate students so it was not possible in those cases to determine a correlation between the hours submitted and what we might anticipate the hours needed in the traditional program. Also, some credit recovery programs are not recording the credit earned in their programs but are reporting the credit in the core school year program. Some core school day programs had the credits that their students earned reported in the after school program. Some Independent Study programs are reporting membership based on enrollment rather than on work completion.

Based on the credits submitted for the core school year program, 35 percent of schools reported needing fewer hours per credit earned than we would expect based on the length of school year and graduation requirements of the district. Four percent needed the same number of hours, 20 percent were within 10 percent of the district and 41 percent needed more hours than the district.

Based on the credits submitted for the summer program, 56 percent of alternative schools reported needing fewer hours per credit earned than we would expect based on the length of school year and graduation requirements of the district. Five percent needed the same number of hours, 10 percent were within 10 percent of the district and 29 percent needed more hours than the district.

Graduation Rates

In Minnesota, we calculate four-, five- and six-year graduation rates. The five-year rate indicates students who would have been expected to graduate the year before, and the six-year rate indicates students who would have been expected to graduate two years before. For example, in FY 15, the five-year rate indicates those students

who would have been in the four-year cohort in FY 14, and the six-year rate indicates those students who would have been in the four-year cohort in FY 13. Students are credited to their last school of attendance for the purpose of computing a graduation rate for that school.

The four-year graduation rate is calculated by dividing the number of graduates by the number of students in the cohort who would have been expected to graduate. The cohort in the denominator is created by compiling first-time ninth-graders plus any transfers into that cohort and removing any students who transferred out of the cohort into another program.

The Five-Year Graduation Rate is calculated similarly but allows a fifth year to be included in order to determine the number of students graduating within four or five years. The Five-Year Graduation Rate is the sum of those students graduating in four years plus those who graduated in five years divided by the cohort. This means that the number of five-year graduates should be equal to or greater than the number of four-year graduates. In most cases, the graduation percent should increase from four to five years and from five to six years.

There are a few implications to consider when interpreting graduation rates for alternative programs. SAAPs exist to serve students who are at risk of not graduating on time; therefore, it is expected that graduation rates will be lower for SAAPs. However, the graduation rates for some alternative programs can be misleading due to data coding practices on behalf of districts. While graduation rates at programs that are designed to serve students who are at risk of not graduating are often lower than traditional schools, the reported graduation rates may not clearly reflect the actual graduation rates of the students they serve.

For example, some districts implement the practice of removing the alternative school student graduate from the counts for the alternative school and enroll the student in the traditional school in order to count the student as having graduated within the traditional program. For example, one program had a cohort size of 200 students with 107 graduates. However, the district in which the alternative program was located withdrew 104 of these students on the last day of class and enrolled them into the traditional high school. The alternative school was left with three graduates out of 96. This caused the alternative school's graduation rate to drop from 54 percent to 3 percent.

A second anomaly can also appear with summer credit recovery programs. When students complete their graduation requirements at the summer program and are then coded back to and counted as a part of the graduation rate of the traditional school they attended in the prior year, their graduation completion is not credited to the summer program.

Third, it can be difficult to accurately compare prior year data. Graduation rates are determined by dividing the number of graduates by the number of students in that cohort. Within some alternative programs, the cohort size increases dramatically for the five-year and six-year rate. This can create a situation in which an alternative program graduates more students as compared with the prior year's data yet still experiences a dip in the school's overall percentage due to an increase in cohort size. This scenario can happen when students who do not finish in four years attend the alternative school as opposed to attending traditional high school, thus increasing the cohort size for the alternative program. Once enrolled, these students remain in the alternative

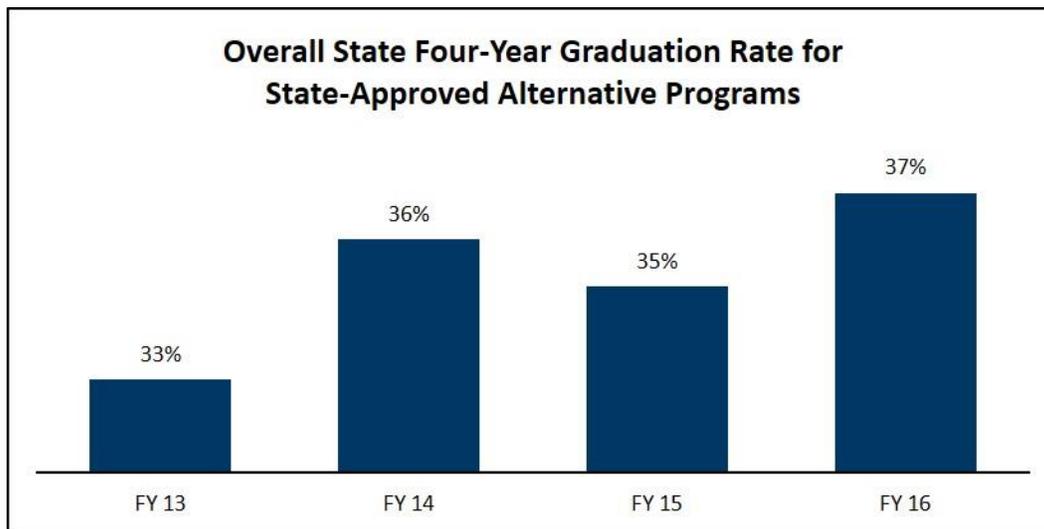

school's cohort unless they enroll in another school, move out of state or the country, or move to a correctional facility.

Another challenge for alternative programs is interpreting graduation rates stemming from the size of the program. For example, programs need a cohort size of at least 10 students in order to calculate a graduation rate. In FY 16, 13 of the 39 ALPs (33 percent) met this benchmark. In FY 16, eight out of 10 CAPs serving twelfth-graders met this criterion. In FY 16, 107 of the 162 ALCs (66 percent) that served twelfth-graders had a cohort size large enough to calculate a graduation rate.

Four-Year Graduation Rates

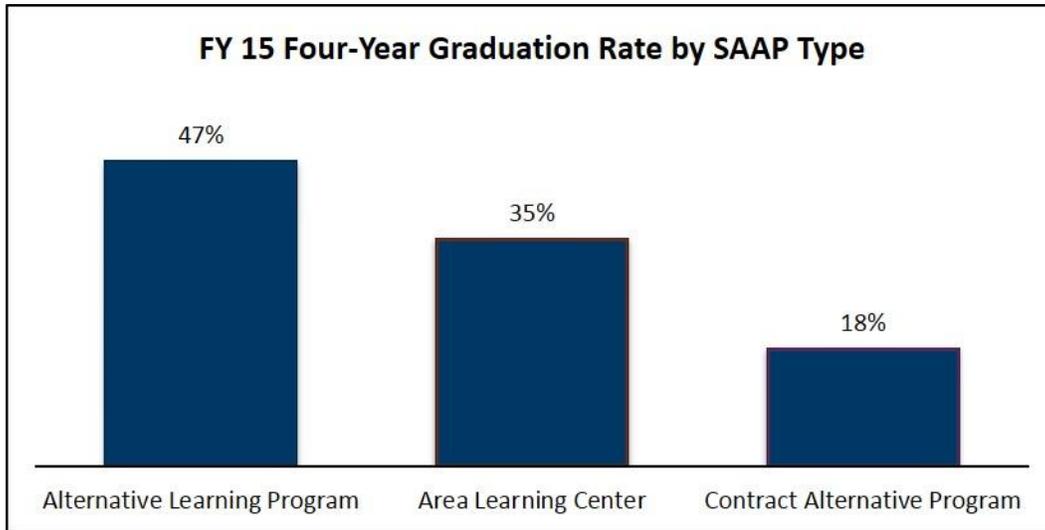

The calculation for four-year graduation rate is based on a cohort of students which is determined by the last school of enrollment. This is used as the denominator. Students are included in the cohort year based on when they entered into ninth grade. The number of graduates within a four-year period of time is then divided by the number of students in the cohort. Students who newly enroll in a Minnesota school are also included into the cohort calculation; only those students who are officially documented as having left a Minnesota school are removed from the cohort. The last school of enrollment maintains the student in their cohort.

Overall in the state, the four-year graduation rate for alternative programs in FY 15 was 35 percent. In FY 16, it increased to 37 percent.

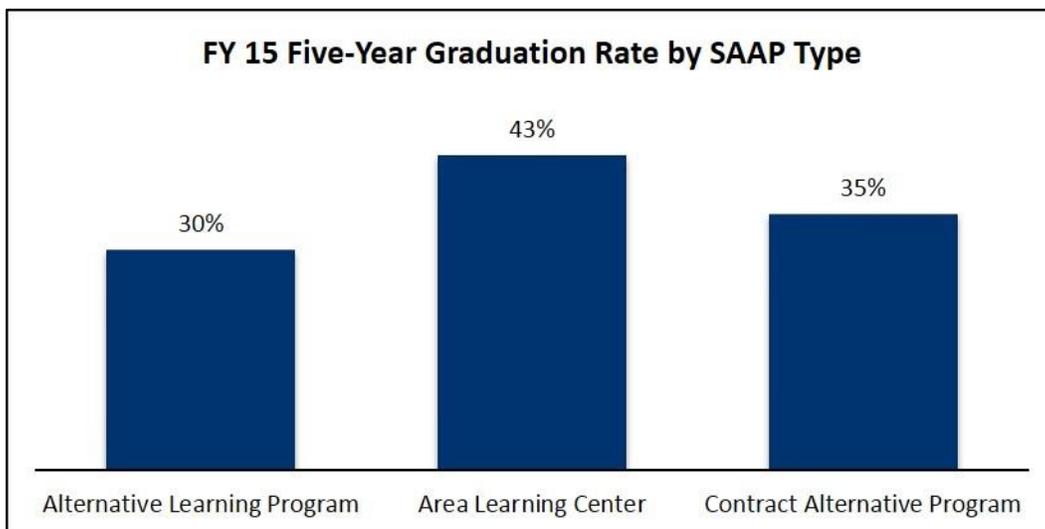

Despite existing challenges when reporting graduation rates for alternative programs, there are a number of noteworthy outcomes in FY 16. In Minneapolis Public Schools, the School Within a School (SWS) ALC programs had high graduation rates; higher than the state average for all students, and higher than the Minneapolis rate for all students at three of these programs. The SWS program at Roosevelt High School showed a 91 percent four-year graduation rate. At SWS Edison it was 93 percent, and at SWS Henry, it was 95 percent. These three rates were in the top five of all alternative programs statewide. The highest ranked program had a graduation rate of 100 percent. This was Intermediate District 917 EDOP DCALS Extended Day Program. Rounding out the

top five was Minnesota River Valley ALC. When comparing this with the overall state graduation rate of 37 percent for alternative programs, these five programs stand out.

Five-Year Graduation Rates

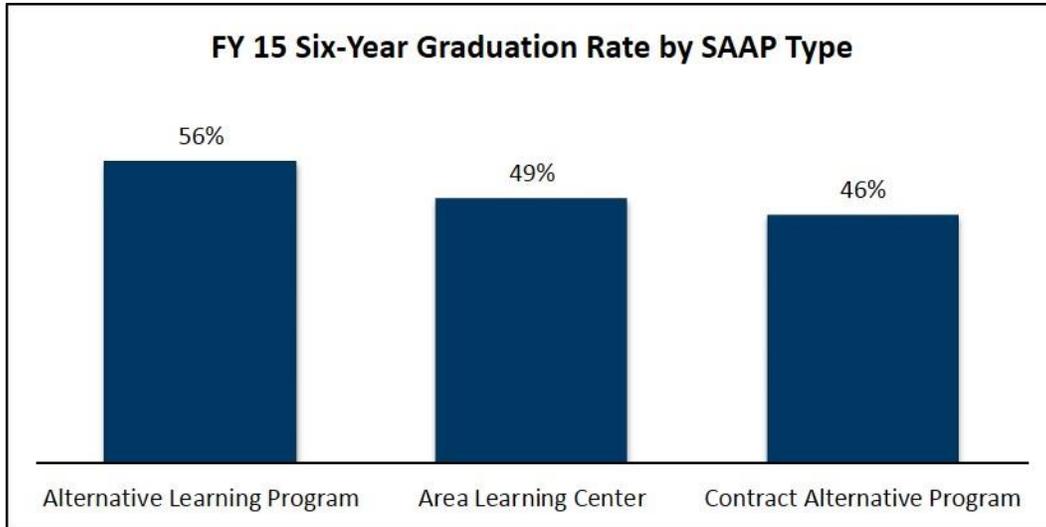

Five-year graduation rates reflect the students who needed an extra year to complete their graduation requirements. We expect to see an increase in the four-year rate from the previous year to the five-year rate from the current year. When comparing the number of FY 15 four-year graduates with the number of FY 16 five-year graduates (i.e., the same cohort of students), the number of students who graduated increases to 2,981 from 1,993, an increase of 50 percent. The graduation rate increases from 35 percent to 46 percent, an increase of just 31 percent. This is because the cohort size increased from 5,702 students to 6,442 students. The larger the cohort size, the smaller the percentage of graduates.

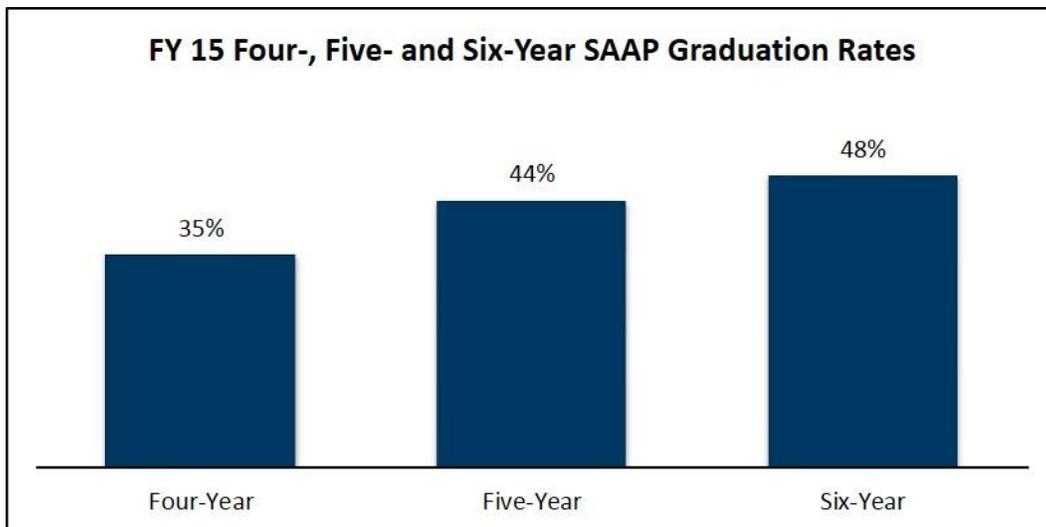

Six-Year Graduation Rates

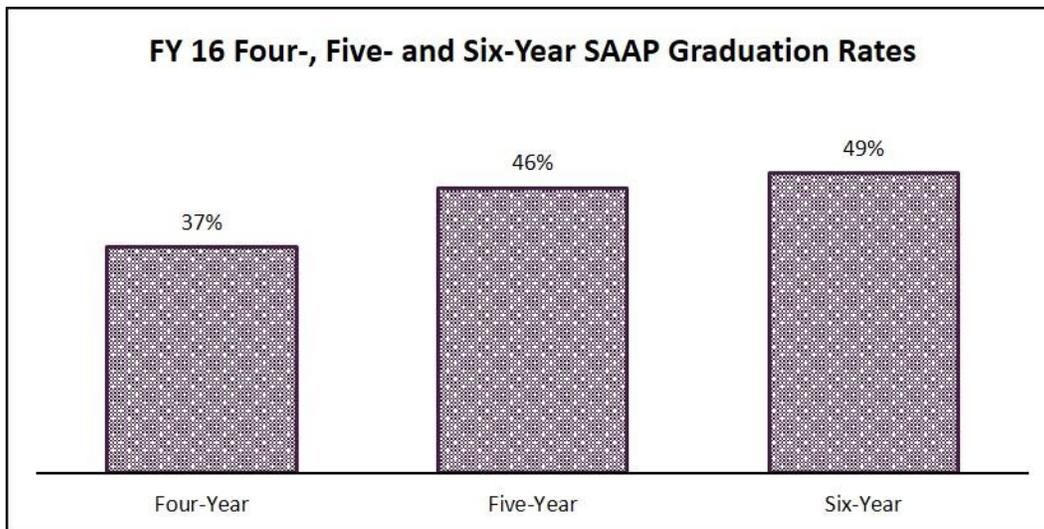

For FY 15, the overall six-year graduation rate was 48 percent. In FY 16, it was 49 percent. But again, we compare the six-year graduation rate to the five-year rate from the year before and the four-year rate from two years before.

When comparing the number of FY 15 five-year graduates (2,798) with the number of FY 16 six-year graduates (3,036), there is an increase of 9 percent in the number of graduates of the same cohort.

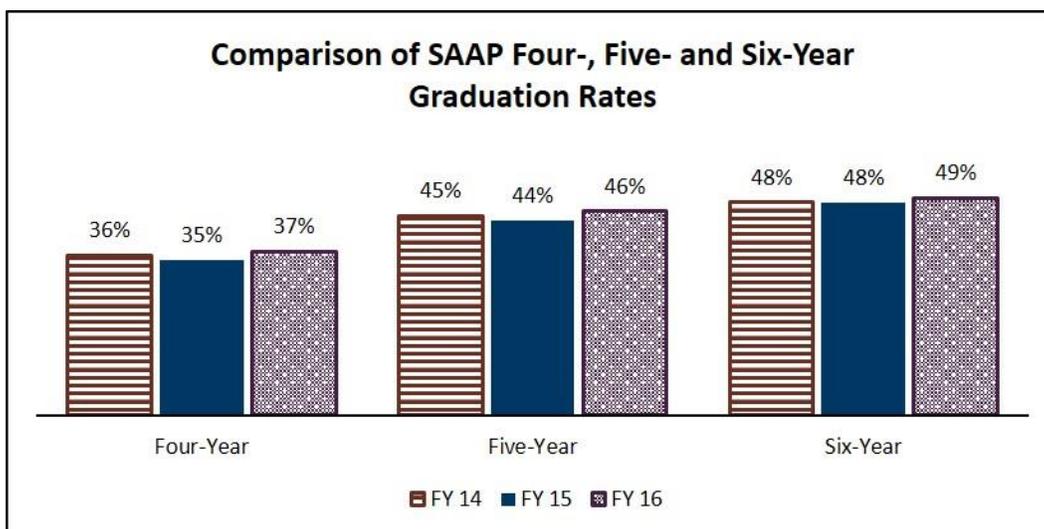

Overall State Four-Year, Five-Year and Six-Year Graduation Rates

A significant consideration in looking at these graduation rates is the change in cohort size used for calculation changes over time. The increase in the cohort graduation rate is not as large as the increase in the number of graduates. This is because of the increase in the cohort size. When calculating graduation rates, if the number of graduates increases *and* the cohort size increases, the effect can be a lower than expected graduation rate. For example, the number of graduates increased for the FY 15 four-year rate to the FY 16 five-year rate by nearly 49.6 percent, but the percentage of graduates for that same time increased only 31 percent because of the increase in the cohort size. Traditional high schools also saw an increase in graduates, although smaller, but their cohort size decreased. An increase in number of graduates coupled with a decrease in cohort size increases graduation rates. This shifting of students from the traditional high schools cohort into alternative schools cohort has the effect of *raising* the graduation rate at traditional high schools while *lowering* the graduation rate at the alternative schools.

Overall, the graduation rates have remained fairly constant over time. A fairly significant increase from the four-year rate to the five-year rate occurs, but not from the five-year rate to the six-year rate.

Identifying At-Risk and Off-Track Students

The legislation asked for the success that learning year program providers experience in identifying at-risk and off-track students and how successful they were in providing prevention and intervention strategies for them. In order to look at this, both terms needed to be defined. At-risk students are defined in [Minnesota Statutes, section 124D.68](#), and the statute lists several qualifying factors. Off-track is not yet defined in legislation. For the purposes of this report, off-track students are defined as those students who are not on track to graduate on time with their peers, most likely due to failing a class or a course.

Intervention and prevention strategies have not been set out in a defined state level list. Working directly with the alternative programs, a list of possible strategies was compiled, and feedback was provided for the FY 14 and FY 15 reports.

Defining success is problematic without established benchmarks. While many districts are implementing the Minnesota Early Indicators Response System (MEIRS), it is not used in every district. The department queried districts about how they identify their at-risk and off-track students and about a variety of intervention and prevention strategies and their level of implementation. Individual district information is available by request in a separate report titled “Report on Learning Year Programs Appendix of Individual Program Information”.

Districts were asked how they identify students who were off-track or at-risk for their summer programs. Of the summer programs identified, 85 percent were credit recovery. Nearly all districts reported that they rely on school counselors as one of the methods to identify these students (97 percent).

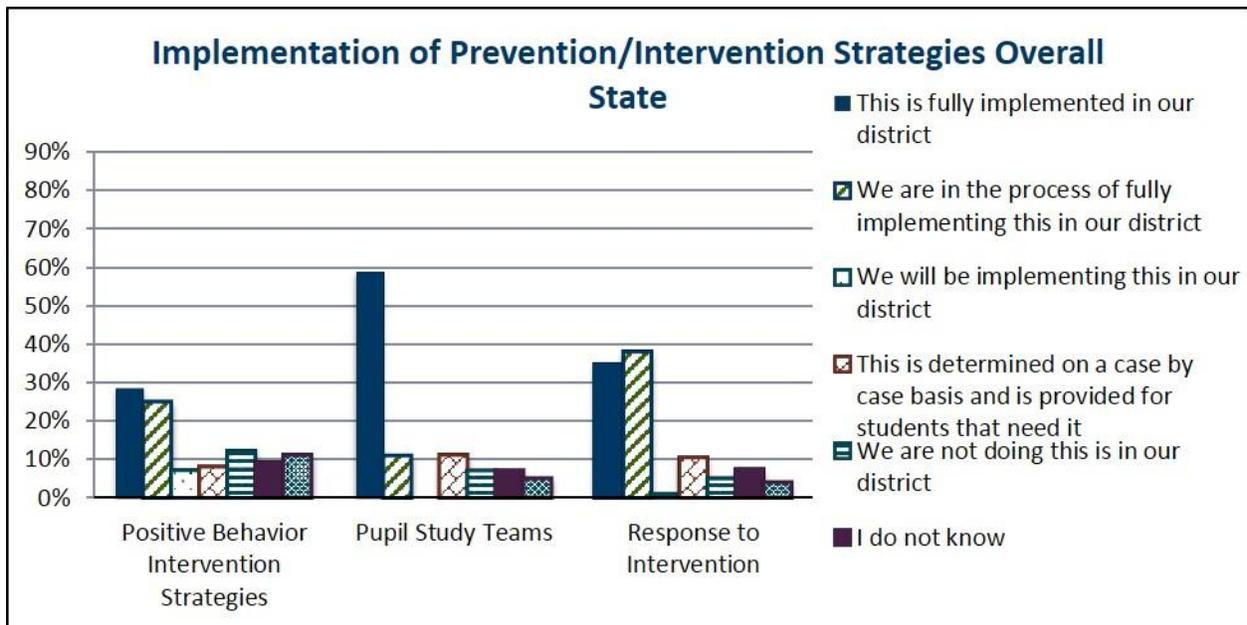

For the core school year programs, SAAPs were asked how students were identified for referral to their program. The most common ways identified were students being behind in credits or not graduating on time with their peers. This was followed by counselor referral, then students identified as being below grade level expectations, and then students with attendance issues.

Because the legislation specifically asked for information on how districts identify at-risk and off-track students, we first asked districts if they viewed these as being two distinct groups and, if so, how the approach for each of these student groups might differ. Fifty-seven percent of districts reported that they view at-risk and off-track students as being part of the same student group. Forty-four percent of the districts reported that they implement the same process for both groups. Some districts responded yes to both items.

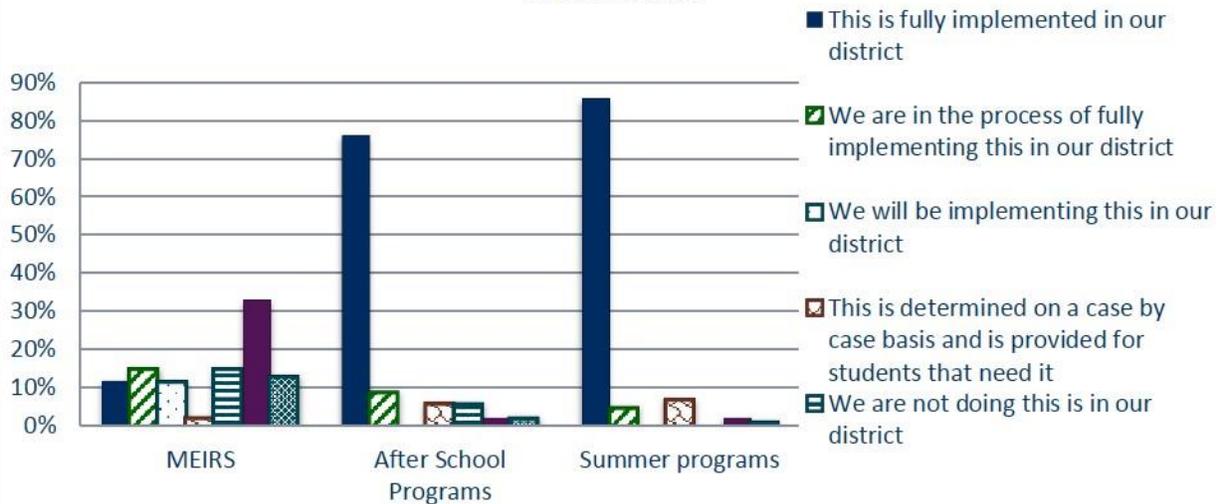

Strategies for At-Risk and Off-Track Students

Intervention and Prevention Strategies

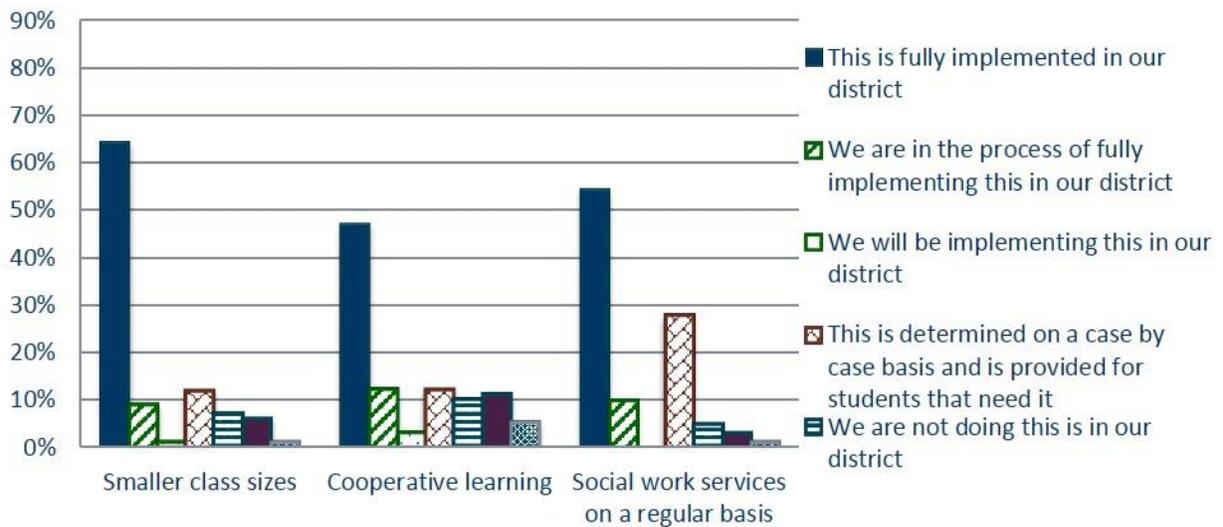

Because there is not a state-defined list of intervention or prevention strategies, districts were provided with a list of strategies and the opportunity to add strategies they were using that were not on the list. While the legislation asked both prevention and intervention information of the learning year program providers, it is important to distinguish that SAAPs are not a prevention strategy. SAAPs are an intervention that a district might use for an at-risk or off-track student. Students enrolling in an SAAP are already identified as at-risk students. Districts were queried on the strategies that they were using. The following charts show their responses. Individual district responses are available by request in a separate document.

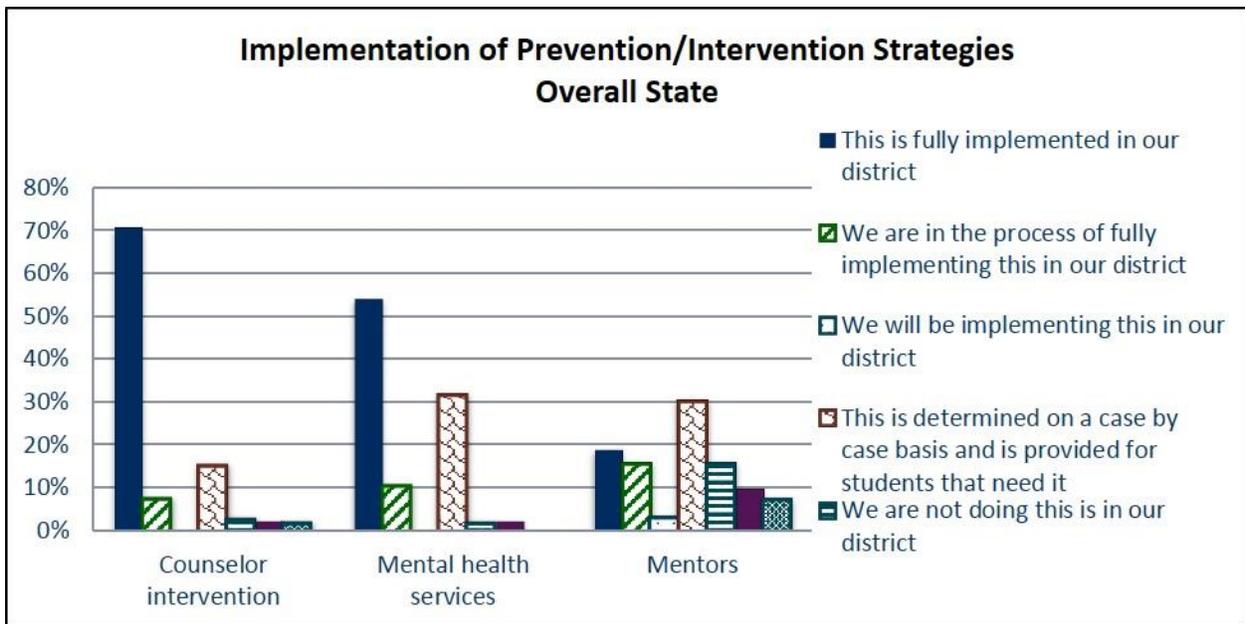

Implementation of Prevention/Intervention Strategies Overall State

Implementation of Prevention/Intervention Strategies Overall State

Recuperative and Recovery Strategies

As previously mentioned, defining the success rates of recuperative and recovery strategies that were undefined both in terms of what they are and what success would look like, provided a challenge for data collection. Three recuperative and recovery strategies were determined. Districts were asked if they used any of these three and how successfully they felt these were implemented. These strategies were:

- (i) Personally contacting each student who left the district in order to offer him/her education options (approximately 73 percent of district did this);
- (ii) Sending information to the families of students who have left about other options (approximately 66 percent of district did this); and
- (iii) Outreach programs to students who have left the district (less than half of the districts did this).

Career and College Readiness Benchmarks

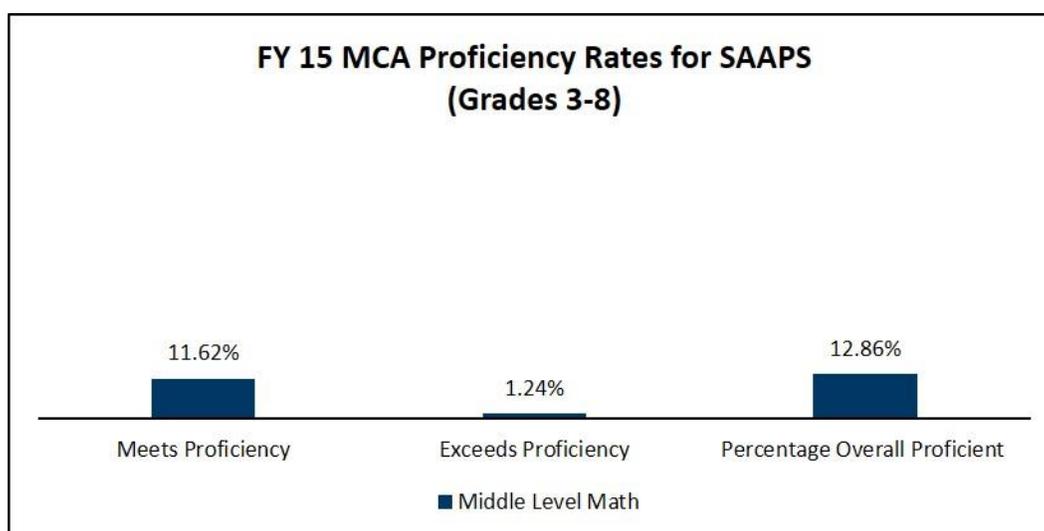

The legislation also asked for the percentage of students in these programs whose progress and performance levels were meeting career and college readiness benchmarks under [Minnesota Statutes, section 120B.30, subdivision 1](#).

Multiple indicators can be used to demonstrate career and college readiness, and there is no one single statewide metric that is used to measure whether students are prepared for postsecondary and the workforce.

In order to report students who were meeting career and college readiness benchmarks, the Minnesota Comprehensive Assessments, referenced in Minnesota Statutes, section 120B.30, subdivision 1, were used as a statewide measurement. The Minnesota Comprehensive Assessments are aligned to the Minnesota K-12 Academic Standards, designed to prepare students for career and college. For this report, the Minnesota Comprehensive Assessment performance data was used as the statute-defined career and college readiness measure.

It is important to note when reviewing the data below that the majority of the students in SAAPs are in extended day or extended year programs, not in core school day programs. In this analysis, no differentiation is made for length of enrollment in the SAAP. Enrollments ranged from two hours to over 2,000 hours.

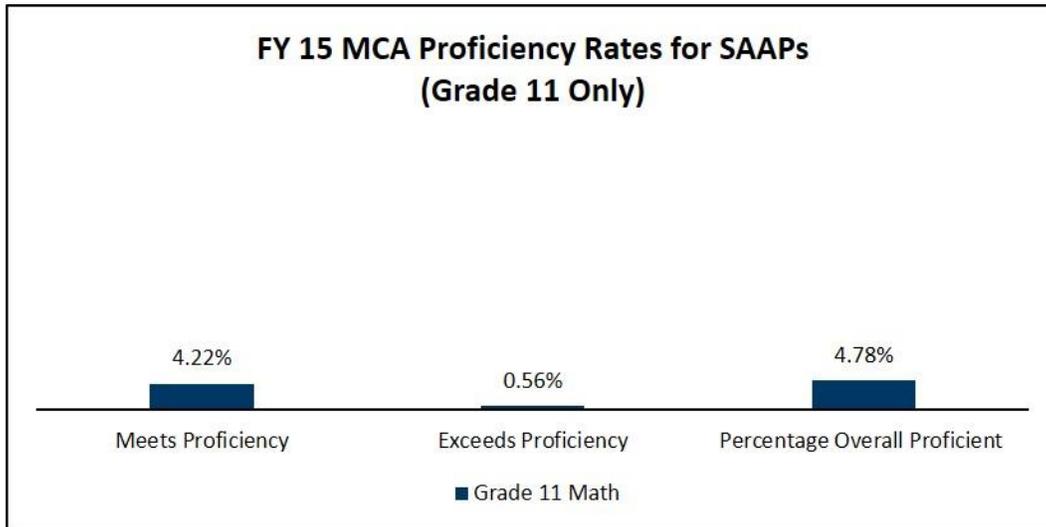

For charts with all students, 5.86 percent are included for math and 4.07 percent are included for reading. The following charts show performance of students enrolled during the testing window in SAAPs in reading and in math. For FY 15, students in grades three to eight are included for math, students in grade 11 are included for reading and all grades are shown for both math and reading.

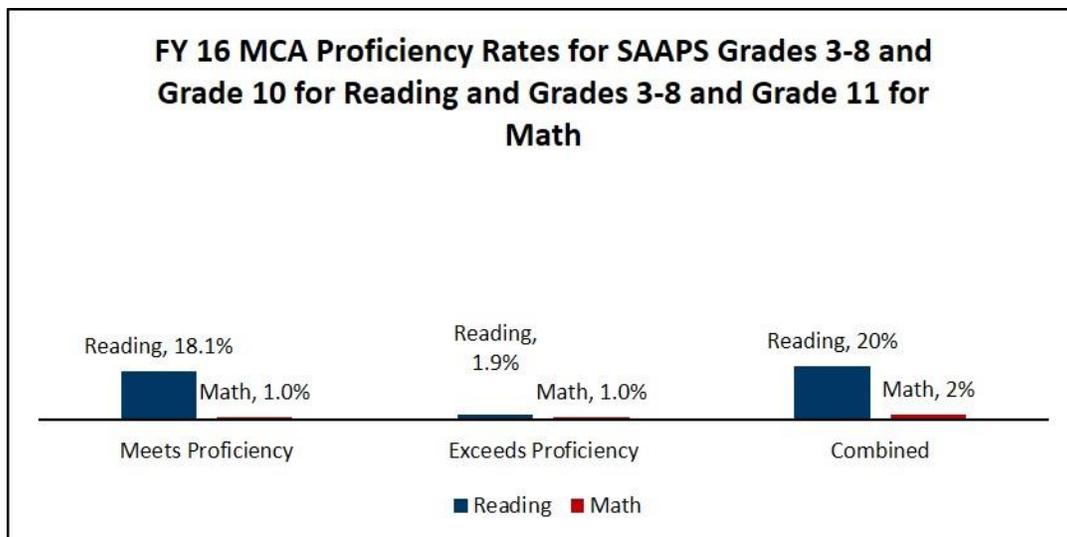

MCA reading scores are not separated into individual grade levels. For FY 15 we are looking at the MCA Reading exam across all grade levels. Both reading and math proficiency levels dropped in FY 15, with the math

proficiency percentages dropping from 23.5 percent to just over 7 percent. It is difficult to draw any conclusions from this as less than 6 percent of the students enrolled during the year at a SAAP are included in the data.

For the grade 11 MCA Math, there was also a significant drop in percentages, falling from 8.9 percent in FY 14 to 4.78 percent in FY 15. Less than 20 percent of the students enrolled at some point in a SAAP are included in the FY 15 figures.

In FY 16 MCA test scores for students in Reading (grades 3-8 and 10) and Math (grades 3-8 and grade 11). As in previous years, there was a small percentage of SAAP students included in the data set. In FY 16, this was 3.3 percent for Reading and 4.1 percent for Math. The chart for grade 11 is not available for FY 16. It is difficult to draw any conclusions for this as such a small percentage of students overall are able to be included.

Conclusion

In FY 2016, there were 571 active separate school codes for these programs, including 252 ALCs, 51 ALPs, 17 CAPs and 251 TS programs. These active SAAPs served over 157,000 individual students. The majority of students participate in out-of-school time programs with the most prevalent out-of-school time program being Targeted Services. The most common core school day programs are Area Learning Centers. In the core school day programs, the largest student group are those students in grade 12 and beyond.

In comparison with the state average, a higher percentage of males are enrolled in SAAPs. Students in SAAPs are more likely to be students in poverty and students of color. This is especially true of the students in Contract Alternative programs, where the percentage of students qualify for free and reduced-priced lunch for FY 15 is 86 percent. It declined to 85 percent in FY 16 and to 80 percent in FY 17.

In terms of special education, students in SAAPs are slightly more likely to be students in need of special education services when compared to the state overall. In FY 15, students in CAPs were three times more likely to be identified as English Learner (EL) students and to receive EL services than the state average. In FY 16, they were nearly five times more likely. This fell to approximately three times more likely in FY 17.

Determining career and college readiness is an area where clearly defined measures are needed. Because of the high numbers of students that are not enrolled in a core school day SAAP during the testing window and students who are dually enrolled in a traditional program and an alternative school within a school, low percentages of students have an MCA score.

Programs view at-risk and off-track students as being the same student group; therefore, intervention strategies are the same for at-risk and off-track students. There are a number of challenges when interpreting graduation rates among alternative programs. Even so, a number of programs report a four-year graduation rate between 60 to 100 percent. Minneapolis Public School's newly implemented school within a school programs saw four-year graduation rates for three of their programs of 91, 93 and 95 percent, three of the top five graduation rates across the state. Alternative programs appear to experience a greater increase from the four- to five-year graduation rate as compared with the five- to six-year rate. The five- to six-year graduation rate often appears to remain the same.

There has been a significant increase in the number of Early Middle College programs. Students in these programs are taking a large number of college credits, both remedial and college level, but more work needs to be done over a number of years to determine the efficacy and sustainability of these programs. The anecdotal data is encouraging, especially the information from the students themselves. For more information on the impact of this program, please view [Back on Track: Journeys to a High School Degree](#), a documentary produced by Twin Cities Public Television.

While some cooperatives and intermediate districts offer their own diploma, most do not. Analysis of hours per credit to district hours per credit cannot occur because these organizations serve multiple districts: Central MN Joint Powers District, Freshwater Education District, Goodhue County Education District, Hiawatha Valley Education District, Intermediate District 287, Intermediate District 917, MN River Valley Education District, Northland Learning Center, Oak Land Vocational Cooperative, Lakes Country Service Cooperative, Region 6 and 8 Southwest/West Central, River Bend Education District, Runestone Area Education District, Southern Plains Education Cooperative, Southwest Metro Education Cooperative, Wright Technical Academy

Appendix G: Glossary of Terms

Average Daily Attendance (ADA): Attendance Days (or hours) divided by Instructional Days (or hours).

Average Daily Membership (ADM): Membership Days (or hours) divided by Instructional Days (or hours). This is weighted based on the student's grade level to arrive at Pupil Units or Weighted ADM (WADM). The weighting factors are set in statute. ADM/WADM is the basis for general education revenue.

Area Learning Center (ALC): Category of State-Approved Alternative Programs that are characterized by:

- An area learning center must provide comprehensive educational services to enrolled secondary students throughout the year, including a daytime school within a school or separate site for both high school and middle school level students. ([Minn. Stat. § 123A.05](#)).
- Must be established in cooperation with other districts and must serve the geographic area of at least two districts (with the exception of Minneapolis, St. Paul and Duluth). ([Minn. Stat. § 123A.05](#)).
- Students must meet the at risk criteria ([Minn. Stat. § 124D.68](#)).
- Must operate year round (school year starts in June).
- Out-of-school time programs, also referred to as Extended day and Extended year programs.
- All students must have a CLP.
- Students can generate more than 1.0 ADM when membership exceeds statute minimums. (Refer to LYPS and ADM for statute limits).
- Approved programs can apply to provide an independent study component.
- Cannot deny non-district students who meet eligibility access to programs

Alternative Learning Program (ALP): Category of State-Approved Alternative Programs that are characterized by:

- Typically tied closely to one school district, serving a defined grade-level population.
- Has the option of serving students only from within the district the program is located.
- Students must meet the at-risk criteria ([Minn. Stat. § 124D.68](#)).
- May make program hours and calendar optional.
- All students must have a CLP.
- Students can generate more than 1.0 ADM when membership exceeds statute minimums. (Refer to LYPS and ADM for statute limits).
- Approved programs can apply to provide an independent study component.

At-Risk: Students who meet the statute-defined criteria ([Minn. Stat. § 124D.68](#)).

Child Count: The name applied to the federal reports that generate federal special education dollars. This is a count of all students who have IEPs or IFSPs on December 1 of any given year. It is also referred to as the Unduplicated Child Count.

Comprehensive Education Program: ALCs must provide a comprehensive education program at both the middle school and high school level. Students should be able to complete their graduation requirements entirely through the ALC.

Continual Learning Plan (CLP): All students enrolled in a State-Approved Alternative Program must have an annually updated CLP that addresses their learning objectives and experiences, assessment measurements and requirements for grade level progression. Specific statute requirements can be found in: [Minnesota Statutes, section 124D.128](#), or in the CLP section of this resource guide.

Contract Alternative: Nonpublic entity that contracts with a public school district to provide instructional services to at-risk students. Because these are a category of State-Approved Alternative Programs, all statutes that govern other alternative programs must be adhered to here. Effective FY99, these programs are state-designated Learning Year Program Sites at the sponsor program's option; students can generate more than 1.0 (but no more than 1.2) ADM when membership exceeds statute minimums.

Core Year: The number of Instructional Days and Length of Day required by a school or program for students to make regular grade progression. This is used as the ADM divisor for Learning Year programs. Statute requires minimums based on grade level but individual schools and programs can require more.

Dual Enrolled: Students who are full-time at the traditional school and receive extended day/year instructional services outside the core school day/year. Depending on State-Approved Alternative Program status and specific approval, this can occur from kindergarten through 12th grade. Each school/program reports the instructional time it provides to the student.

Early Middle College: The Early/Middle College program was added to § 124D.09 and allows SAAP students to take developmental classes on the college campus. Students earn a high school diploma while also earning postsecondary credits towards a degree or credential including a certificate, diploma or an associate's degree.

Flexible School Year: sometimes referred to as Year Round, and refers to a variety of programs.

- Schools who extend the school year over a 10- to 12-month period, but the number of Instructional Days is no greater than those in a traditional school year,
- The requirement that State-Approved Learning Year Programs must provide instruction year round, i.e., during each of the 12 months.

General Education Development (GED) Diploma: Persons aged 16 and above who have not completed a high school diploma program and are not currently enrolled in classes leading to a high school diploma, may be eligible to take the GED tests in Minnesota.

Individual Education Plan (IEP): Student has been formally assessed and identified as having a disability and is receiving special education services. The IEP is the student plan for addressing the student goals and objectives.

Individual Family Services Plan (IFSP): An “IEP” for very young children. It involves other agencies as well as education.

Independent Study (IS): State-Approved Alternative Programs can apply to provide an independent study program/component for students enrolled in their programs who are a minimum of 16 years of age. High schools can also apply for independent study for expelled students only. These students generate membership hours based on successful completion of coursework; 20 percent or more of the membership earned must be student-teacher contact time.

Learning Year Program Site (LYPS): State-approved programs that agree to operate on a year-round basis. Students must have a CLP and can generate more than 1.0 ADM (but no more than 1.2 ADM) when they generate more membership hours than the greater of (a) the locally defined core school year or (b) the statute-defined minimum number of instructional hours. Statute-defined minimum instructional hours are:

Early Childhood (EC): Ineligible

Handicapped Kindergarten (HK): 875 (with a maximum of 1.0 ADM)

Kindergarten: 875

Grades 1-6: 935

Grades 7-12: 1,020

Minnesota Automated Reporting Student System (MARSS)

Notification of Change in Student Enrollment (NCSE) ED-02037: This is a means to exchange State Reporting Number, Status Start Date, State Aid Category, and Basic Standards Test information between districts when students transfer.

Part-Time: A student who is enrolled less than full-time. Full-time is defined by the traditional school calendar. Any student who is scheduled for less than the entire day at the high school and is not considered absent, or for purposes of dual enrollment, has more than 60 minutes in study hall is considered part-time.

Postsecondary Enrollment Option (PSEO): allows high school eleventh-graders and twelfth-graders to take courses, full- or part-time, at a postsecondary institution for high school credit.

Pull-Out Program: State-approved middle/junior high alternative program. Students are "pulled out" of the traditional school and the alternative program provides instructional services, typically at a separate site. Students are eligible to generate more than 1.0 ADM (but less than 1.2) when they receive more than the statute-defined minimums.

Pupil Units (PU): This is the figure that determines state aid and levies.

State Aid Category (SAC): This is the MARSS code that determines how or why a student is enrolled in this district. Every record has an SAC code.

School within a School: State-Approved Alternative Program where middle/junior high level students receive alternative services for a minimum of 25 percent of their school day. The traditional program and the alternative program each report the student for the percentage of time that each provides the educational services.

State-Approved Alternative Program (SAAP): includes state-approved Area learning Centers, Alternative Learning Programs, Middle level/Junior High (School-Within-a-School or Pullout), Targeted Services, including after school and summer school programming, and Contracted Alternative Programs. Each requires separate approval.

Seat time: Used for MARSS reporting to indicate the number of hours for generating revenue; traditional classroom is used to indicate the instructional model.

Status End Code (SEC): This is the MARSS code that indicates why a student's record is being terminated. Every student record has an SEC except on the fall submissions for students who are still enrolled as of the extract date.

Special Education Evaluation Status (SEES): This MARSS data element indicates if the student has received assessment services, had an IEP, or the IEP was terminated during the school year.

Shared Time: Nonpublic school students who receive eligible public school instructional services generate shared-time foundation aid based on the portion of the school day they are enrolled in the public school.

Staff Automated Reporting system (STAR): This is the means by which public districts report staff employment and assignment data to the Department.

Targeted Services (TS): State-approved elementary and middle/junior high-level program for at-risk students. **Programming occurs on an out-of-school day/year basis.** Only ALCs can apply to provide Targeted Services. Students must have a CLP and services must be provided year round. Students can generate more than 1.0 ADM (but less than 1.2) when they receive more than the statute-defined minimum number of instructional hours.

Title I: There are two types of Title I schools;

- School wide- schools can offer a school wide program when the poverty level at their school is at least 40 percent.
- Targeted Assistance (which is sometimes confused with Targeted Services)- is one that receives Part A funds yet is ineligible or has chosen not to operate a Title I school-wide program

Traditional Classroom: Instructional model where student attends a school with teacher instruction in a classroom setting. Classes meet daily and attendance is required.

Uniform Financial Accounting and Reporting Standards (UFARS): This is the means by which public districts report revenue and expenditure data to the Department.

WADM (Weighted ADM (WADM): Refer to Pupil Units.
