

## Residential Foreclosures in Minnesota – Spring 2010

Minnesota's foreclosure crisis has destabilized the housing market in many parts of the state, and the crisis continues. As part of its mission to advance affordable housing opportunities and foster strong communities, Minnesota Housing has established the prevention and remediation of foreclosures as one of its five strategic priorities. To monitor the evolving crisis, Minnesota Housing purchased data on the ARM reset, delinquency, and foreclosure status of residential mortgages from LPS Applied Analytics. The data will help Minnesota Housing and its partners target their prevention and remediation efforts.

The following report provides key findings about the current state of the foreclosure crisis in Minnesota. The first section provides information about key statewide trends, the second section shows how the foreclosure crisis varies by zip code across the state, and the third section outlines the statewide steps that Minnesota Housing and its partners have taken to address the crisis. Finally, the appendix is a large table that provides data for each residential zip code in the state.

### Current Statewide Trends

- While the number of residential foreclosures in Minnesota declined in 2009, the crisis is expected to continue.
  - Although the number of sheriff sales in Minnesota dropped from 26,251 to 23,019 between 2008 and 2009, the 2009 level is dramatically higher than the 6,472 sales that occurred in 2005.<sup>1</sup> In addition, the number of sheriff sales started to increase again in late 2009 and early 2010.<sup>2</sup>
  - The state's delinquency rate for residential mortgages has increased significantly over the last several years. Between the fourth quarter of 2005 and the fourth quarter of 2009, the percentage of mortgages that were at least 60 days past due quadrupled from 1.10% to 4.71%.<sup>3</sup> On the positive side, the delinquency rate declined for the first time in eight quarters during the first quarter of 2010. The rate dropped to 4.36%, which is still very high. It is too early to determine if this decline will become an ongoing trend or be a temporary decline.

<sup>1</sup> HousingLink, *Foreclosures in Minnesota: A Report Based on County Sheriff Sales Data*, February 15, 2010.

<sup>2</sup> Quarterly sheriff sales data collected by HousingLink.

<sup>3</sup> Mortgage Bankers Association, *National Delinquency Survey*. The delinquency rate applies to loans that are at least 60 days past due but have not started the foreclosure process.

- The foreclosure crisis is transforming from a subprime crisis to a prime crisis.
  - Between 2007 and 2009, the subprime market's share of residential mortgages in foreclosure dropped from 54% to 30% in Minnesota.
  - During the same period, the prime market's share increased from 40% to 59%.<sup>4</sup>
- With the current economic crisis and job losses, many families with prime loans are having difficulty making their mortgage payments.
  - Minnesota's unemployment rate jumped from 3.9% in May of 2006 to 8.4% in May of 2009 and dropped to 7.0% by May of 2010.<sup>5</sup>
  - Many economists predict that unemployment will remain high for at least another year or two.<sup>6</sup>
- There is concern about alt-A loans and option ARMs that will reset or recast in the next few years.<sup>7</sup>
  - With respect to credit risk, alt-A loans are between prime and subprime and often characterized by moderately low credit scores and limited documentation about the borrower's income and other attributes.
  - Option ARMs are adjustable rate mortgages where the borrower has various payment options. Some option ARMs are negative amortizing loans where the principle on the loan actually increases because the borrower's initial monthly payment does not even cover the interest that is owed. Interest-only mortgages are another concern.
  - Adjustable rate mortgages are a concern because some borrowers are able to afford their mortgage payment with the initial "teaser" interest rate but unable to afford the payment when the interest rate resets, often to a higher rate. As long as interest rates remain low, ARM resets are less of a concern (interest payments will continue to be low even after the reset); but when rates increase, ARMs and resets become a greater concern.
  - Historically, ARMs have a higher foreclosure rate than fixed rate mortgages.
  - With a high proportion of borrowers currently owing more on their mortgages than their homes are worth, many borrowers will be unable to refinance out of the ARMs.
  - While the problem of alt-A and option ARMs is probably smaller in Minnesota than some of the most heavily impacted states, such as California, it is nevertheless an issue that needs to be monitored.

## High Need Areas

The foreclosure crisis has devastated some neighborhoods in Minnesota, while the impact has been much less extensive in others. Initially, the impact was the largest in the core neighborhoods of North

<sup>4</sup> Mortgage Bankers Association, *National Delinquency Survey*. These are 4<sup>th</sup> quarter figures.

<sup>5</sup> Minnesota Department of Employment and Economic Development, *Local Area Unemployment Statistics*. These are seasonally adjusted figures.

<sup>6</sup> The Federal Reserve Bank of Philadelphia surveys 42 economic forecasters and summarizes their projections; see <http://www.phil.frb.org/research-and-data/real-time-center/survey-of-professional-forecasters/2010/surveq210.cfm>.

Nationally, the unemployment rate is expected to be 9.6% in 2010, 8.9% in 2011, 8.0% in 2012, and 7.1% in 2013.

<sup>7</sup> See "Option ARMs: Housing recovery killer? An explosion of foreclosures will result from option ARMs set to reset to higher payments;" [http://money.cnn.com/2009/11/24/real\\_estate/option\\_ARM\\_defaults/index.htm](http://money.cnn.com/2009/11/24/real_estate/option_ARM_defaults/index.htm); and "Mortgage Losses: Move Over Subprime," *The Economist* (February 5, 2009).

Minneapolis and Eastside of St. Paul along with some outer ring communities just outside the seven-county metropolitan area, particularly in Wright, Sherburne, and Isanti counties. While these areas are still heavily impacted, other communities face a growing threat. For example, counties in north central Minnesota have particularly high unemployment rates, which are placing families at greater risk for delinquency and foreclosure. In addition, the western and southern perimeter of the Twin Cities seven-county area has a concentration of non-prime ARMs that have yet to reset. (Non-prime loans include both subprime and “near-prime” loans. In general, near-prime loans have moderately low credits scores and limited document (i.e. alt-A loans). They also include option ARMs and interest-only loans.)

To show this information, the attached maps display data on each zip code's:

- Post-sale foreclosure and REO rate (reflecting foreclosures that have happened),
- Pre-sale foreclosure rate (reflecting foreclosures that are happening),
- Delinquency rate (reflecting foreclosures that may happen in the near future), and
- Non-prime ARM reset rate (reflecting foreclosures that may happen down the road).<sup>8</sup>

For each rate, there is a statewide map and a map of the Twin Cities metropolitan area. The rates are based on the number of residential first-lien loans in each category divided by the number of households in each zip code.<sup>9</sup> For example, the delinquency rate is the number of loans in a zip code that are 60 or more days past due but not yet in foreclosure divided by the number of households in the zip code. The non-prime ARM reset rate is the number of non-prime ARMs in each zip code that have yet to reach their reset date divided by the number of households in the zip code. A map of county unemployment rates is also included.

Because the data that Minnesota Housing purchased is proprietary, the agency cannot publish the actual rates, but it can publish an index score. To compute an index score, each zip code's rate is divided by the statewide rate. Thus, the statewide rate is 100. If a zip code's rate is twice as high as the statewide rate, it has an index score of 200. If a zip code's rate is half the statewide rate, it has an index score of 50.

---

<sup>8</sup> A loan is in pre-sale foreclosure when legal documents have been filed to start the foreclosure process but a sheriff sale has not occurred. A loan is in post-sale foreclosure after the sheriff sale has occurred but the property has not become an REO (Real Estate Owned) property. An REO property is owned by the lender after the sheriff sale.

<sup>9</sup> Ideally, the rates should be calculated as the number of loans in each category divided by the number of residential parcels in each zip code. Typically, there is one first-lien loan on each residential parcel, and one foreclosure affects one parcel. However, parcel data by zip code is not available. As a proxy for residential parcels, Minnesota Housing used the number of households in each zip code. Zip codes with a higher proportion of multifamily housing (often in urban areas) have proportionally more households per residential parcel than other zip codes. Thus, the rates used in this report (based on problem loans per household) understate the delinquency and foreclosure problem in zip codes with a higher proportion of multifamily housing. (The denominator of the calculation is disproportionately high.)

The number of households in a zip code was estimated by increasing (or decreasing) the number of households in the zip code in 2000 by the rate that the number of households increased (or decreased) between 2000 and 2008 for the county that the zip code primarily falls within. For zip codes with a high household growth rate relative to the rest of their county, the resulting household estimate is an underestimate. For zip codes with a low growth rate relative to the rest of their county, the estimate is an overestimate. To test the reasonableness of these estimates, we examined the number of first-lien mortgages per household in each zip code. In the very few cases where the ratio was clearly out of balance, adjustments were made.

To account for the uncertainty in the household estimates and the resulting rates and index scores, Table 1 in the appendix provides rate index scores in 25 point increments, rather than specific figures. Specific numbers would reflect an inappropriate level of precision and accuracy.

As shown in the maps:

- There is a high rate of post-sale foreclosures and REOs in the Twin Cities metropolitan area and its surrounding counties, with particularly high rates in the outer ring communities and the core neighborhoods of North Minneapolis and the East Side of St. Paul. (See Maps 1a and 1b.) There are also pockets of high-rate communities elsewhere in the state – for example, parts of Crow Wing and Dodge counties.
- The geographic distribution of loans in pre-sale foreclosure is quite similar to post-sale foreclosures and REOs. (See Maps 2a and 2b.)
- Statewide, the geographic distribution of the highest delinquency rates is similar to the distribution of the highest foreclosures rates, but the problem is less concentrated in Minneapolis and St. Paul. The delinquency index scores in Minneapolis and St. Paul are generally lower than their foreclosure scores. (Compare Map 3b with Maps 1b and 2b.). This does not mean that the delinquency problem is diminishing in the cities, but it does mean that the delinquency problem is relatively bigger elsewhere in the state.
- The potential threat of new foreclosures coming from non-prime ARMs that have yet to reset is concentrated in just a few communities that run through the western and southern perimeter of the Twin Cities seven-county area. (See Maps 4a and 4b.) In Greater Minnesota, a few communities in Crow Wing and Cass counties have a concentration.
- Finally, high unemployment is concentrated in north central Minnesota, which may lead to increasing delinquencies and foreclosures in the future. The unemployment data is available by county, rather than zip code. (See Map 5)

When assessing the maps and data, four key points need to be kept in mind:

- While some communities with a large proportion of subprime loans and early foreclosures may have passed the peak of their crisis, the crisis continues in these areas. These communities still need to recover from the destabilizing effects of all the foreclosures that have already occurred. The data in this report apply to the status of loans being serviced in March of 2010. Previously foreclosed properties that are in the hands of a new homeowner or investor are no longer classified as foreclosed. Thus, the data does not completely capture the magnitude of the foreclosure crisis for communities that have already had a concentration of loans go completely through the foreclosure process.
- When assessing need, the foreclosure, delinquency, and ARM reset rates are important, but the number of households that the high rate affects is also important. For example, the post-sale foreclosure / REO index score for zip code 55106, which is on the East Side of St. Paul, is over 300. In addition, this zip code has roughly 19,000 households, which is one of the largest in the state. In contrast, some of the other high rate zip codes have less than 1,000 households. Table 1 in the appendix provides not only the index scores for each zip code but also an estimate of the number of households.
- Some zip codes may show up as having a high delinquency or foreclosure rate because they have a small number of households. If a zip code has only a few hundred households, the

addition of a foreclosure or two can have a dramatic effect on the foreclosure rate. To minimize this small zip code effect, the analysis excludes zip codes with fewer than 200 households.

- Specific neighborhoods within a zip code may have a very high rate of delinquencies and foreclosures even when the zip code has a lower index score. Parts of the zip code may have a very high rate, while other parts of the same zip code may have a very low rate, giving the zip code a lower index score overall. Thus, the zip-code index scores and maps do not identify all the high need areas around the state.

## **Minnesota Housing Efforts to Address the Foreclosure Crisis**

Minnesota Housing and its partners are taking concerted steps to prevent future foreclosures and remediate the destabilizing effects of foreclosures that have already occurred.

- Since October 2007, Minnesota Housing has provided the Minnesota Homeownership Center and its statewide network of foreclosure counselors with nearly \$15 million of funding, including funding from the National Foreclosure Mitigation Counseling program. In 2009, the Homeownership Center and its network helped avert 6,748 foreclosures.<sup>10</sup>
- Minnesota Housing has been an early and substantial funder of foreclosure remediation, largely for the acquisition and rehabilitation of foreclosed homes. The agency has made available over \$70 million since 2007, including revolving loans, subsidies, and \$38.8 million from HUD's Neighborhood Stabilization Program (NSP).
- Local communities have also received NSP funds directly from HUD – nearly \$19 million during the first funding round and \$37.5 million for St. Paul, Minneapolis, Hennepin County, and Brooklyn Park during the second round.
- To maximize the potential for impact under NSP, Minnesota Housing has worked with local sub-recipients to concentrate funds in targeted neighborhoods. Ideally, communities will assist at least 20% of the foreclosed homes in their target areas.
- Minnesota Housing is also part of the Minnesota Foreclosure Partners Council. The council is a partnership of public and non-profit agencies in the Twin Cities metropolitan area that identifies, funds, and implements coordinated policies and programs to effectively address the foreclosure crisis.

## Loans in Post-Sale Foreclosure or REO Statewide Rate: Index = 100

### March 2010

Source: Minnesota Housing analysis of data from LPS Applied Analytics

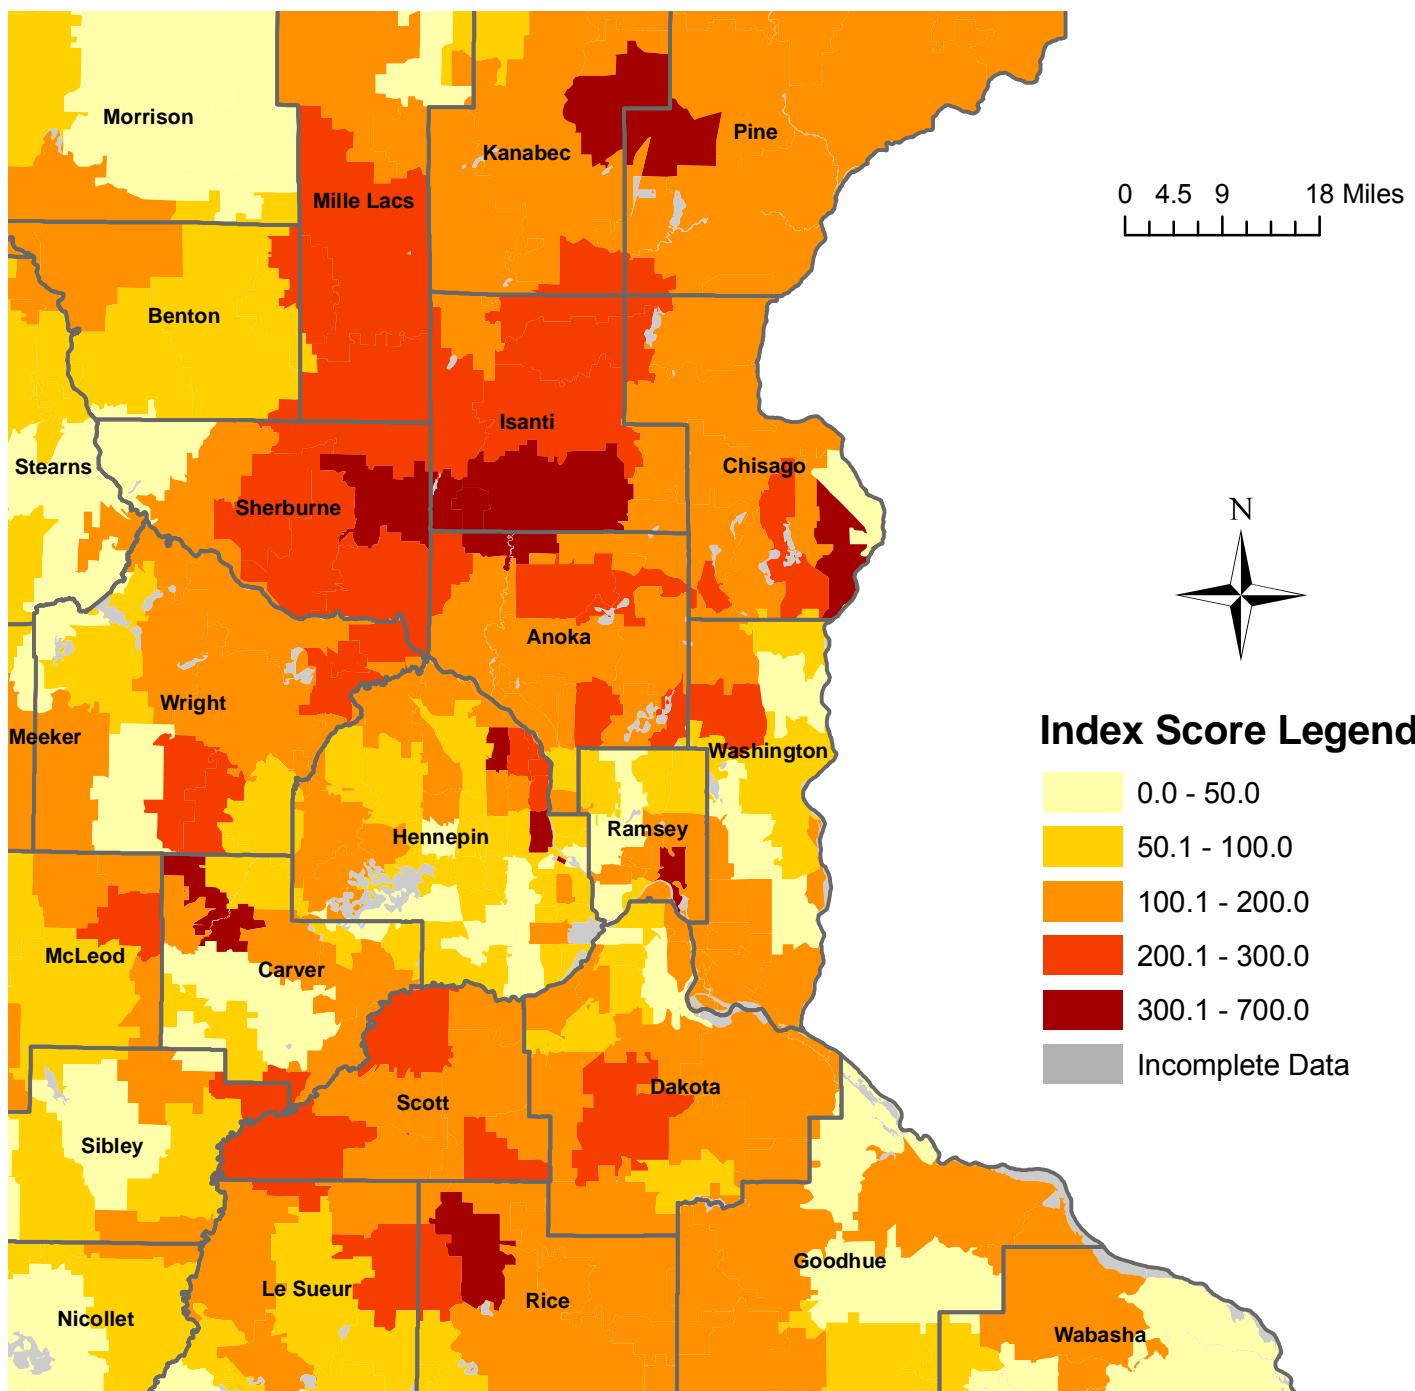

Notes:

1. The index is based on each zip code's post-sale foreclosure/REO rate - the number of loans that are in post-sale foreclosure or REO divided by the number of households in each zip code. Each zip code's rate is divided by the statewide rate to compute the index score. An index score of 200 means the zip code's rate is twice the state rate, while an index score of 50 means the zip code's rate is half of the state rate.
2. Two important zip codes are new and cannot be mapped. Zip code 55130 in St. Paul has an index score of 141, and zip code 55054 in Scott County has an index score of 141.

## Map 1b

### Loans in Post-Sale Foreclosure or REO Statewide Rate: Index = 100 March 2010

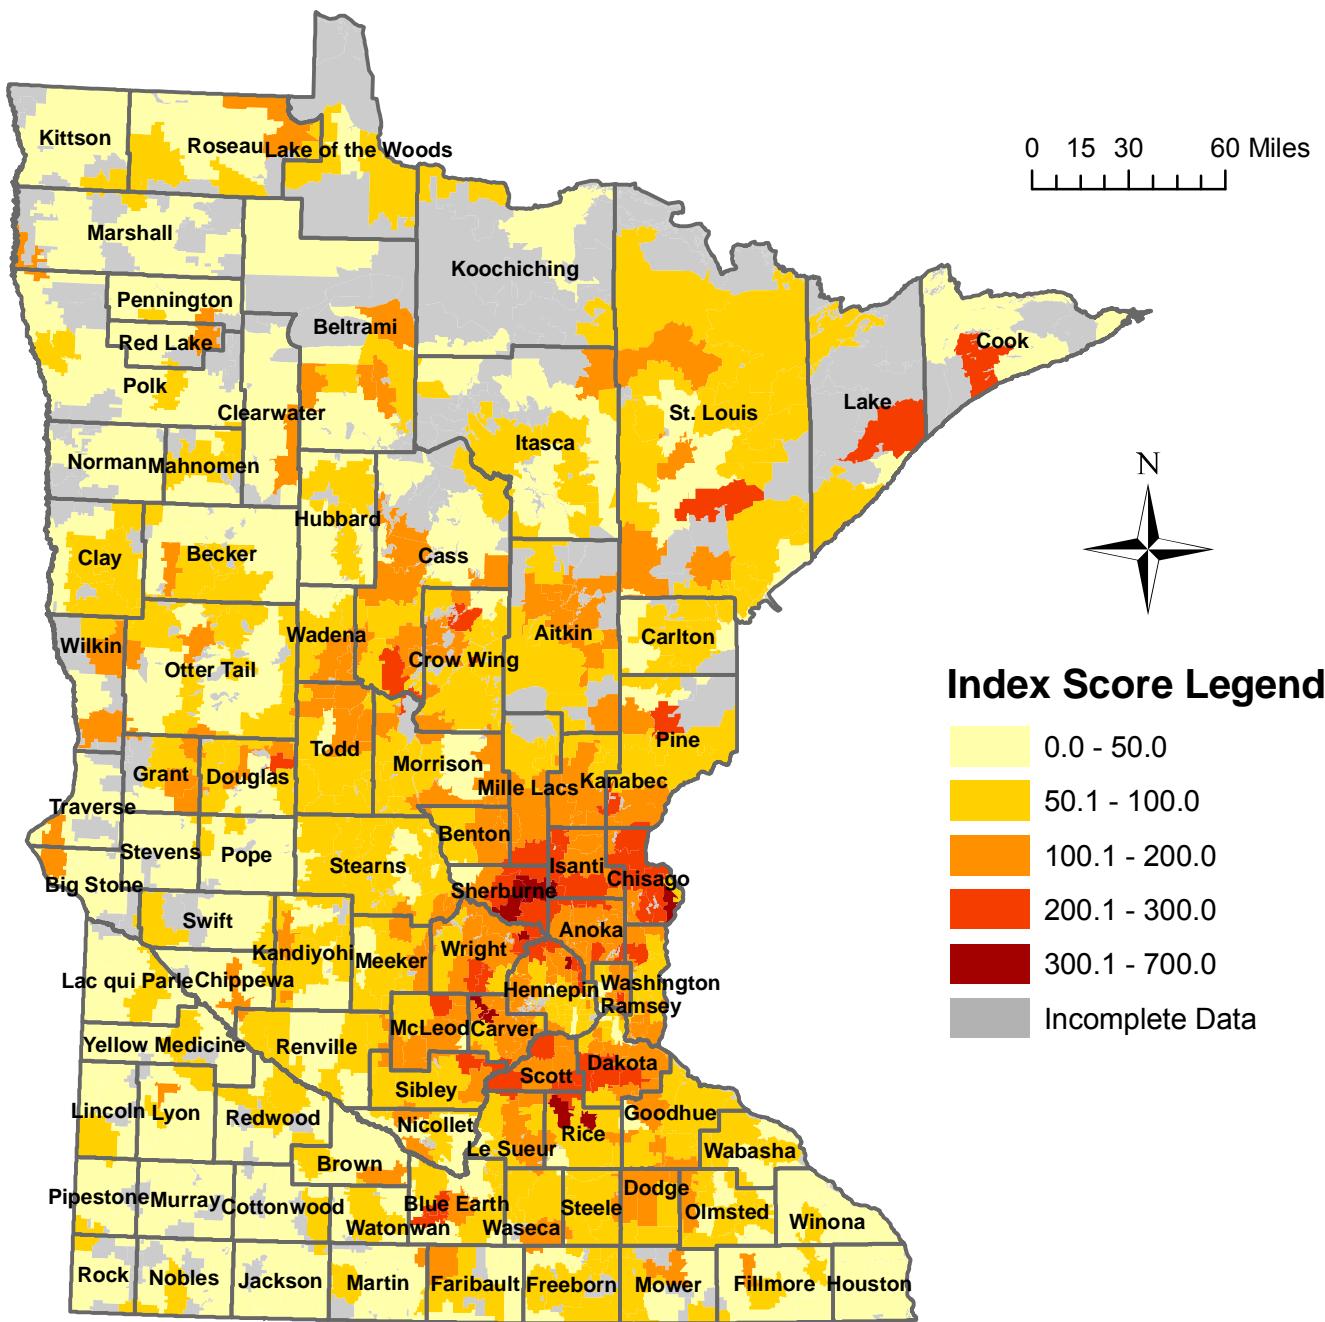

Source: Minnesota Housing analysis of data from LPS Applied Analytics

Notes:

1. The index is based on each zip code's post-sale foreclosure/REO rate - the number of loans that are in post-sale foreclosure or REO divided by the number of households in each zip code. Each zip code's rate is divided by the statewide rate to compute the index score. An index score of 200 means the zip code's rate is twice the state rate, while an index score of 50 means the zip code's rate is half of the state rate.
2. Two important zip codes are new and cannot be mapped. Zip code 55130 in St. Paul has an index score of 141, and zip code 55054 in Scott County has an index score of 141.

## Map 2a Loans in Pre-Sale Foreclosure Statewide Rate: Index = 100 March 2010

Source: Minnesota Housing analysis of data from LPS Applied Analytics

Notes:

1. The index is based on each zip code's pre-sale foreclosure rate - the number of loans that are in pre-sale foreclosure divided by the number of households in each zip code. Each zip code's rate is divided by the statewide rate to compute the index score. An index score of 200 means the zip code's rate is twice the state rate, while an index score of 50 means the zip code's rate is half of the state rate.
2. Two important zip codes are new and cannot be mapped. Zip code 55130 in St. Paul has an index score of 258, and zip code 55054 in Scott County has an index score of 103.

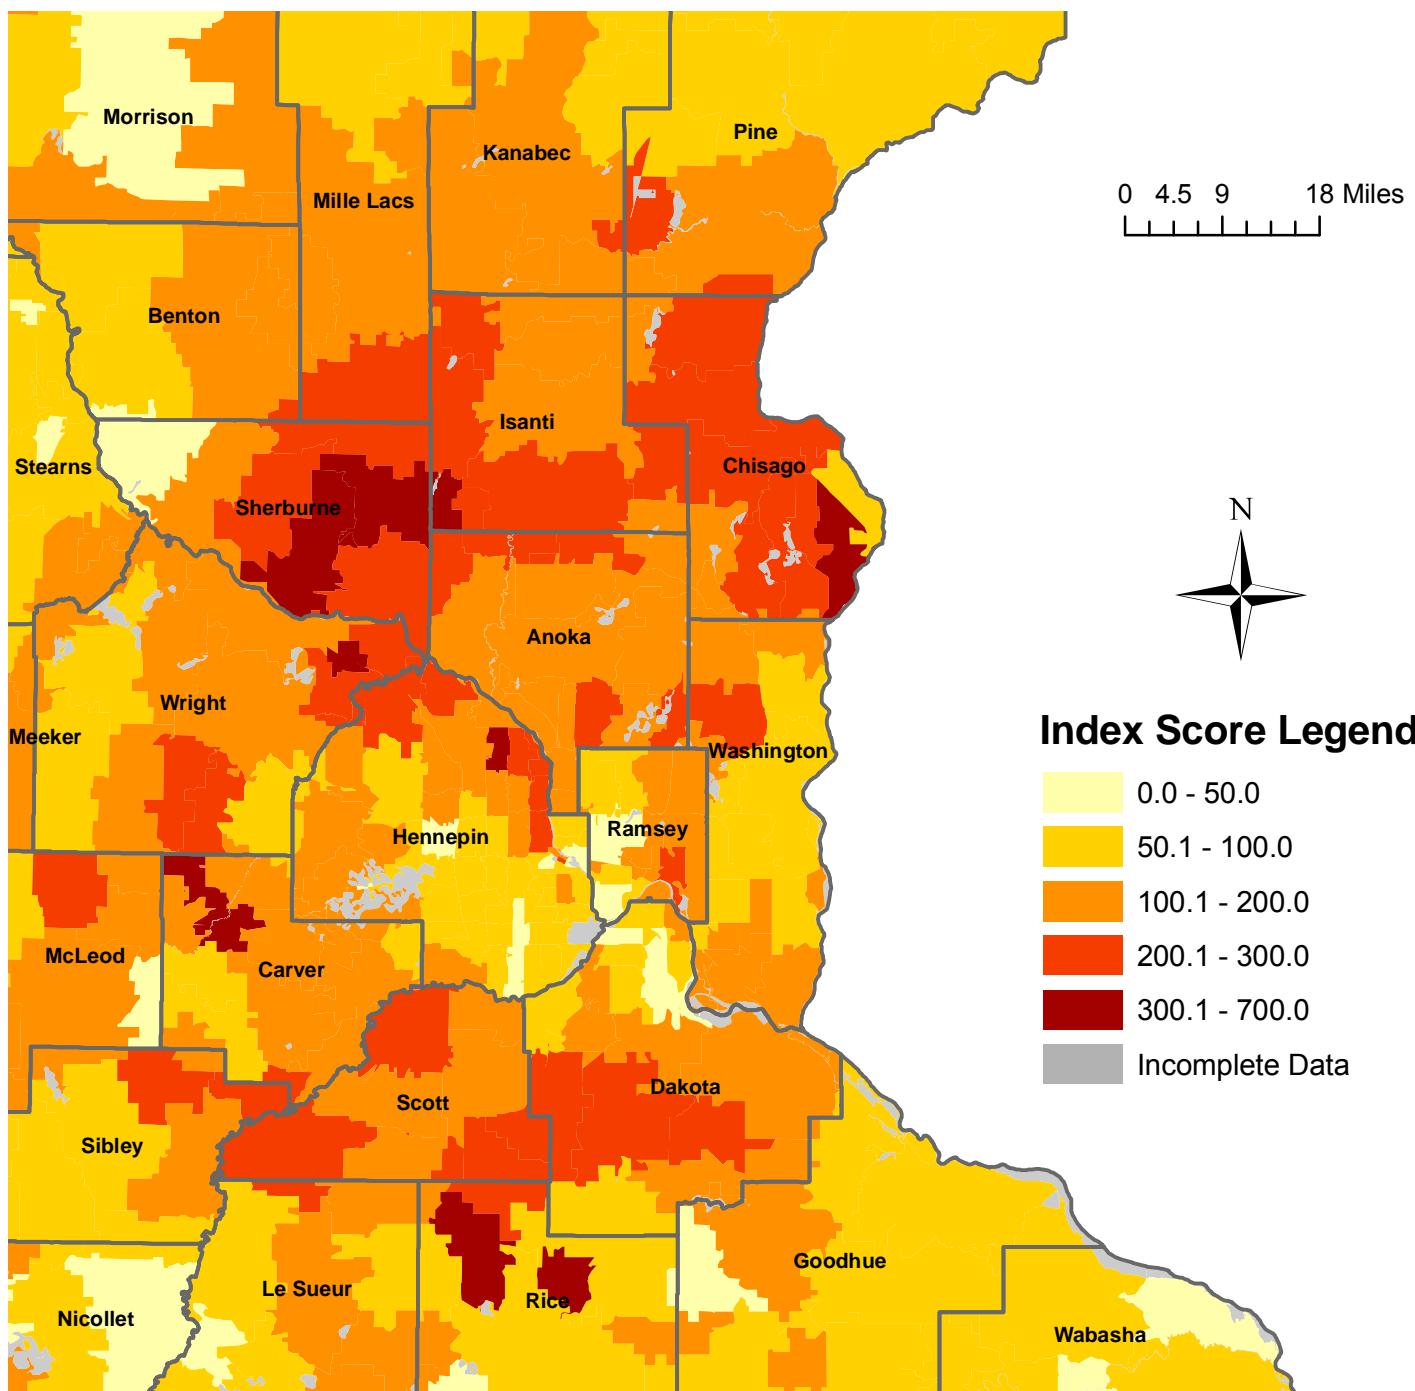

## Map 2b

### Loans in Pre-Sale Foreclosure

#### Statewide Rate: Index = 100

#### March 2010

Source: Minnesota Housing analysis of data from LPS Applied Analytics

#### Notes:

1. The index is based on each zip code's pre-sale foreclosure rate - the number of loans that are in pre-sale foreclosure divided by the number of households in each zip code. Each zip code's rate is divided by the statewide rate to compute the index score. An index score of 200 means the zip code's rate is twice the state rate, while an index score of 50 means the zip code's rate is half of the state rate.
2. Two important zip codes are new and cannot be mapped. Zip code 55130 in St. Paul has an index score of 258, and zip code 55054 in Scott County has an index score of 103.

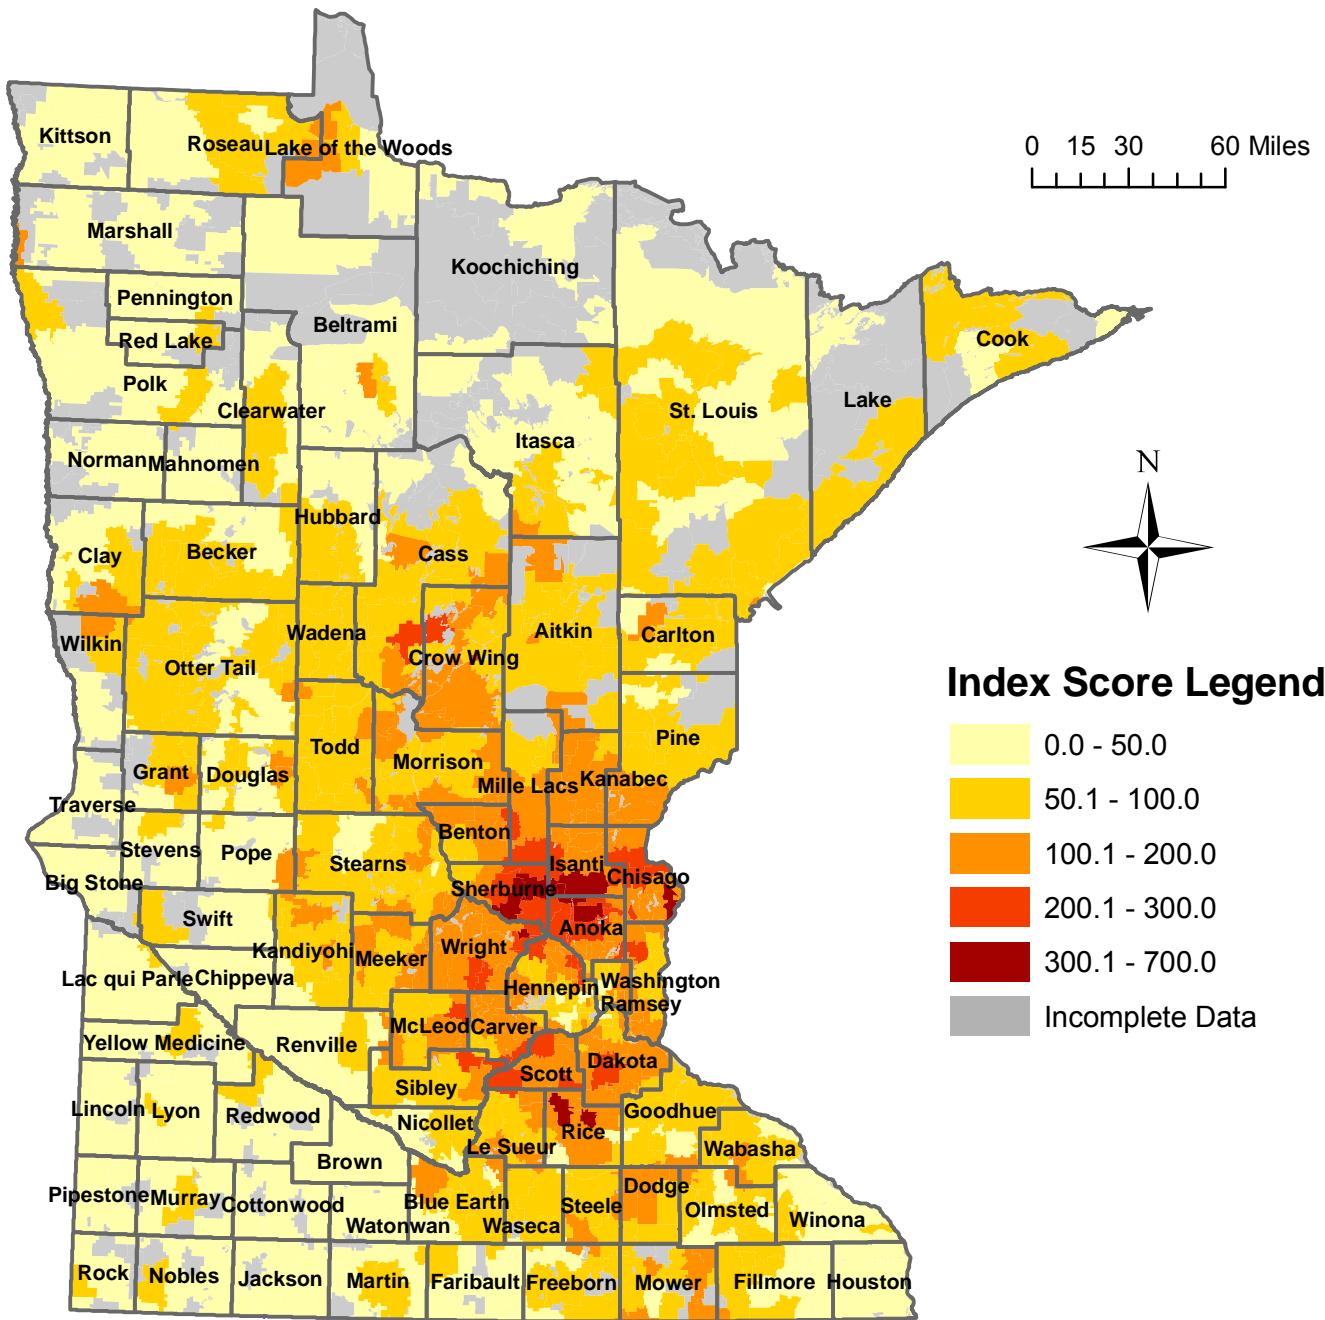

# Map 3a

## Loans in Delinquency

### Statewide Rate: Index = 100

### March 2010

Source: Minnesota Housing analysis of data from LPS Applied Analytics

Notes:

1. The index is based on each zip code's delinquency rate - the number of loans that are 60 or more days past due divided by the number of households in each zip code. Each zip code's rate is divided by the statewide rate to compute the index score. An index score of 200 means the zip code's rate is twice the state rate, while an index score of 50 means the zip code's rate is half of the state rate.
2. Two important zip codes are new and cannot be mapped. Zip code 55130 in St. Paul has an index score of 219, and zip code 55054 in Scott County has an index score of 161.

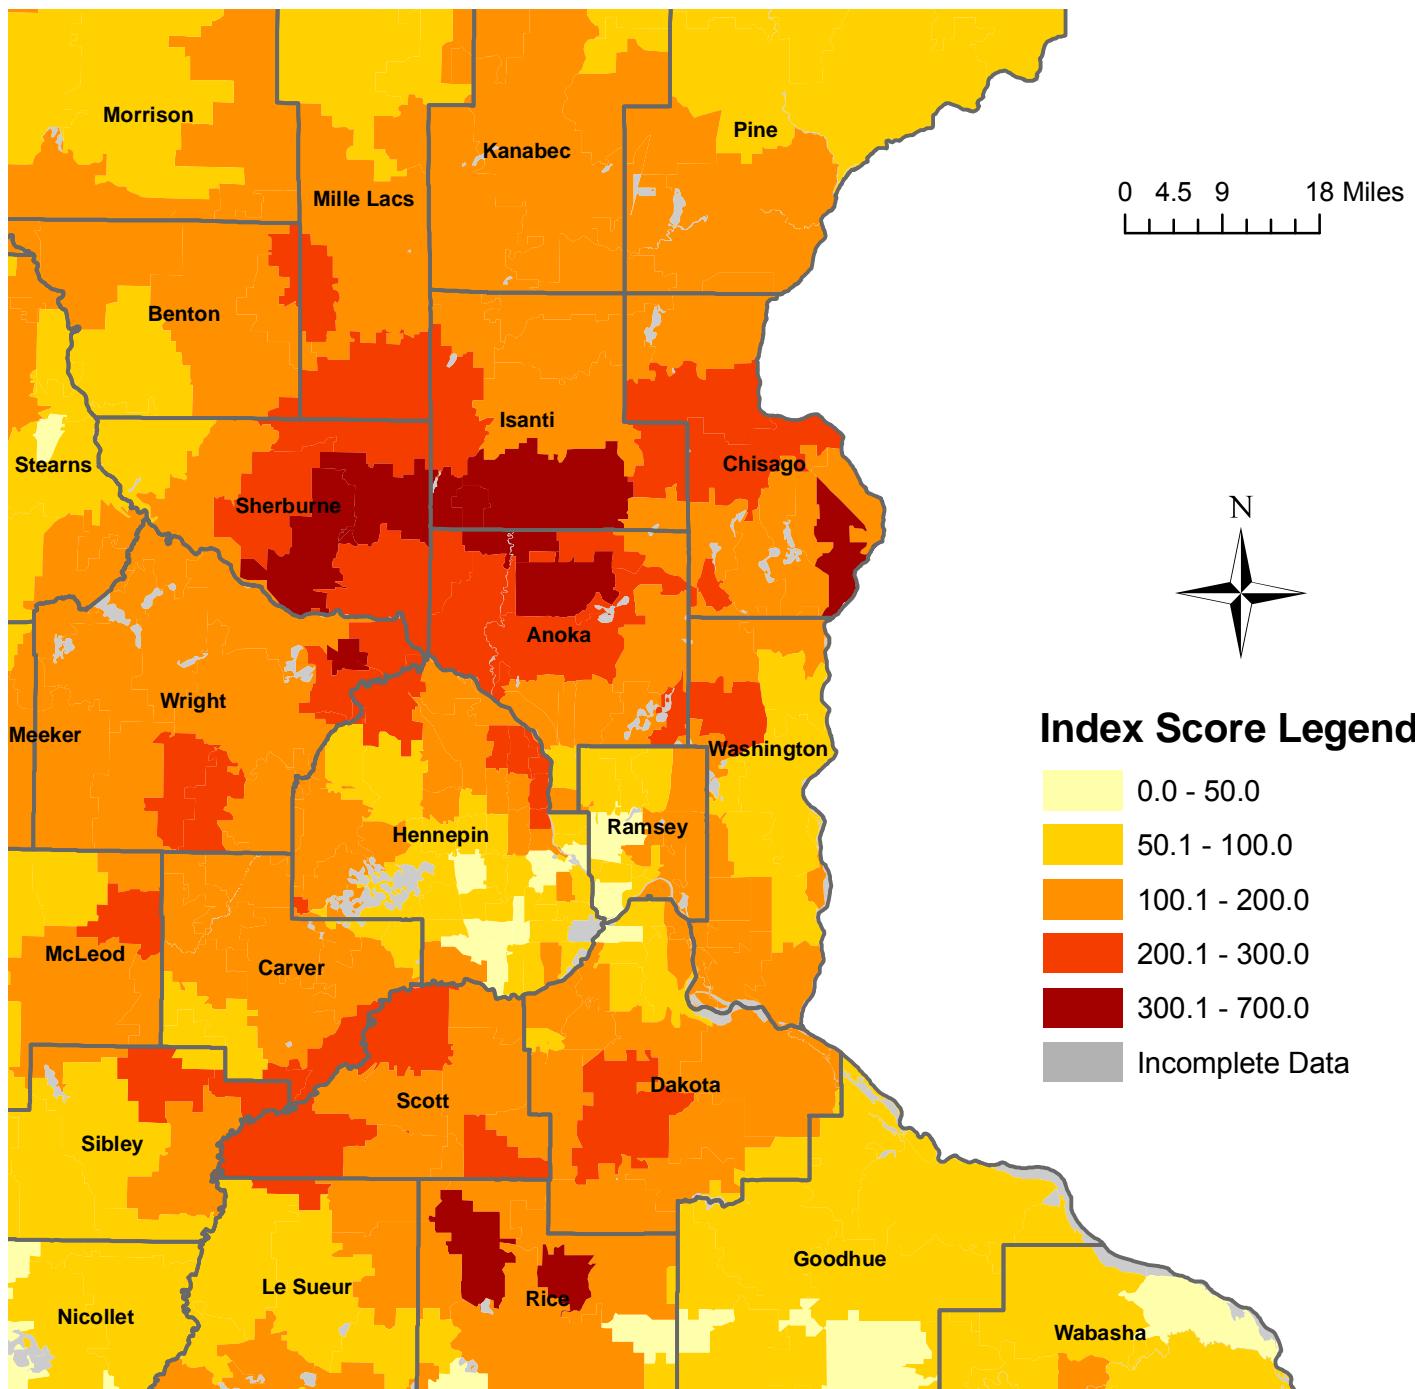

## Map 3b

### Loans in Delinquency

#### Statewide Rate: Index = 100

#### March 2010

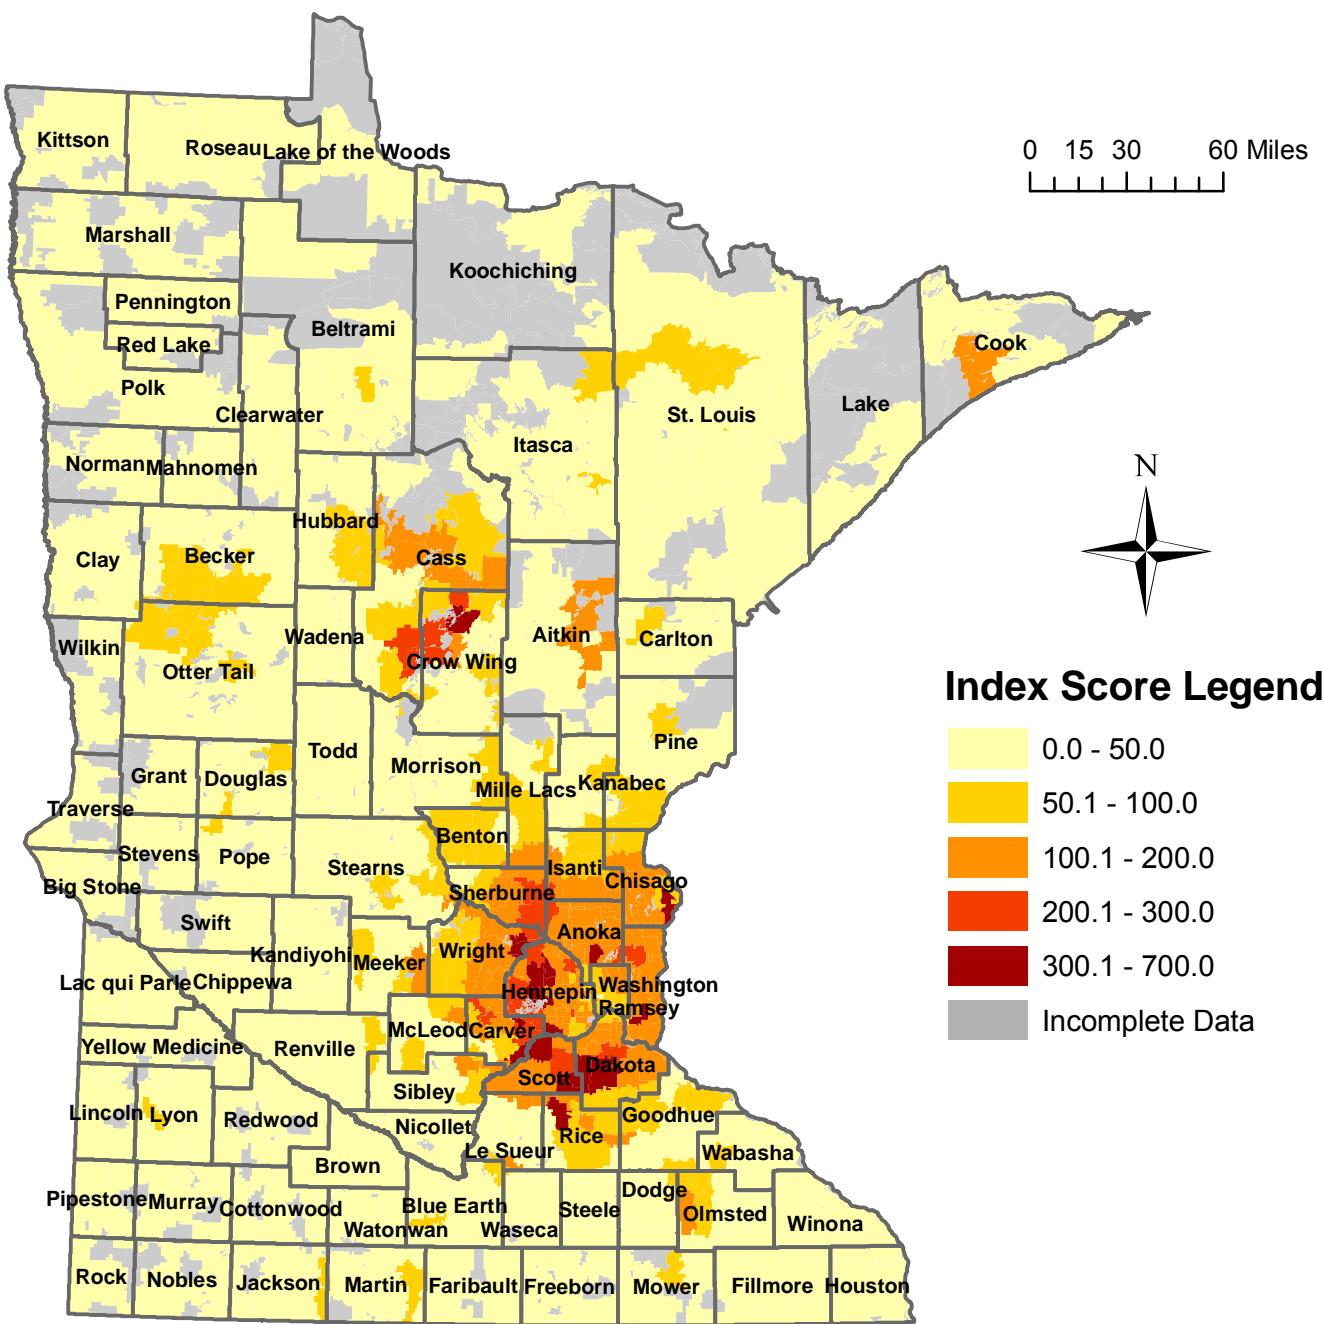

Source: Minnesota Housing analysis of data from LPS Applied Analytics

Notes:

1. The index is based on each zip code's delinquency rate - the number of loans that are 60 or more days past due divided by the number of households in each zip code. Each zip code's rate is divided by the statewide rate to compute the index score. An index score of 200 means the zip code's rate is twice the state rate, while an index score of 50 means the zip code's rate is half of the state rate.
2. Two important zip codes are new and cannot be mapped. Zip code 55130 in St. Paul has an index score of 219, and zip code 55054 in Scott County has an index score of 161.

## Map 4a Non-Prime ARMs Still to Reset Statewide Rate: Index = 100 March 2010

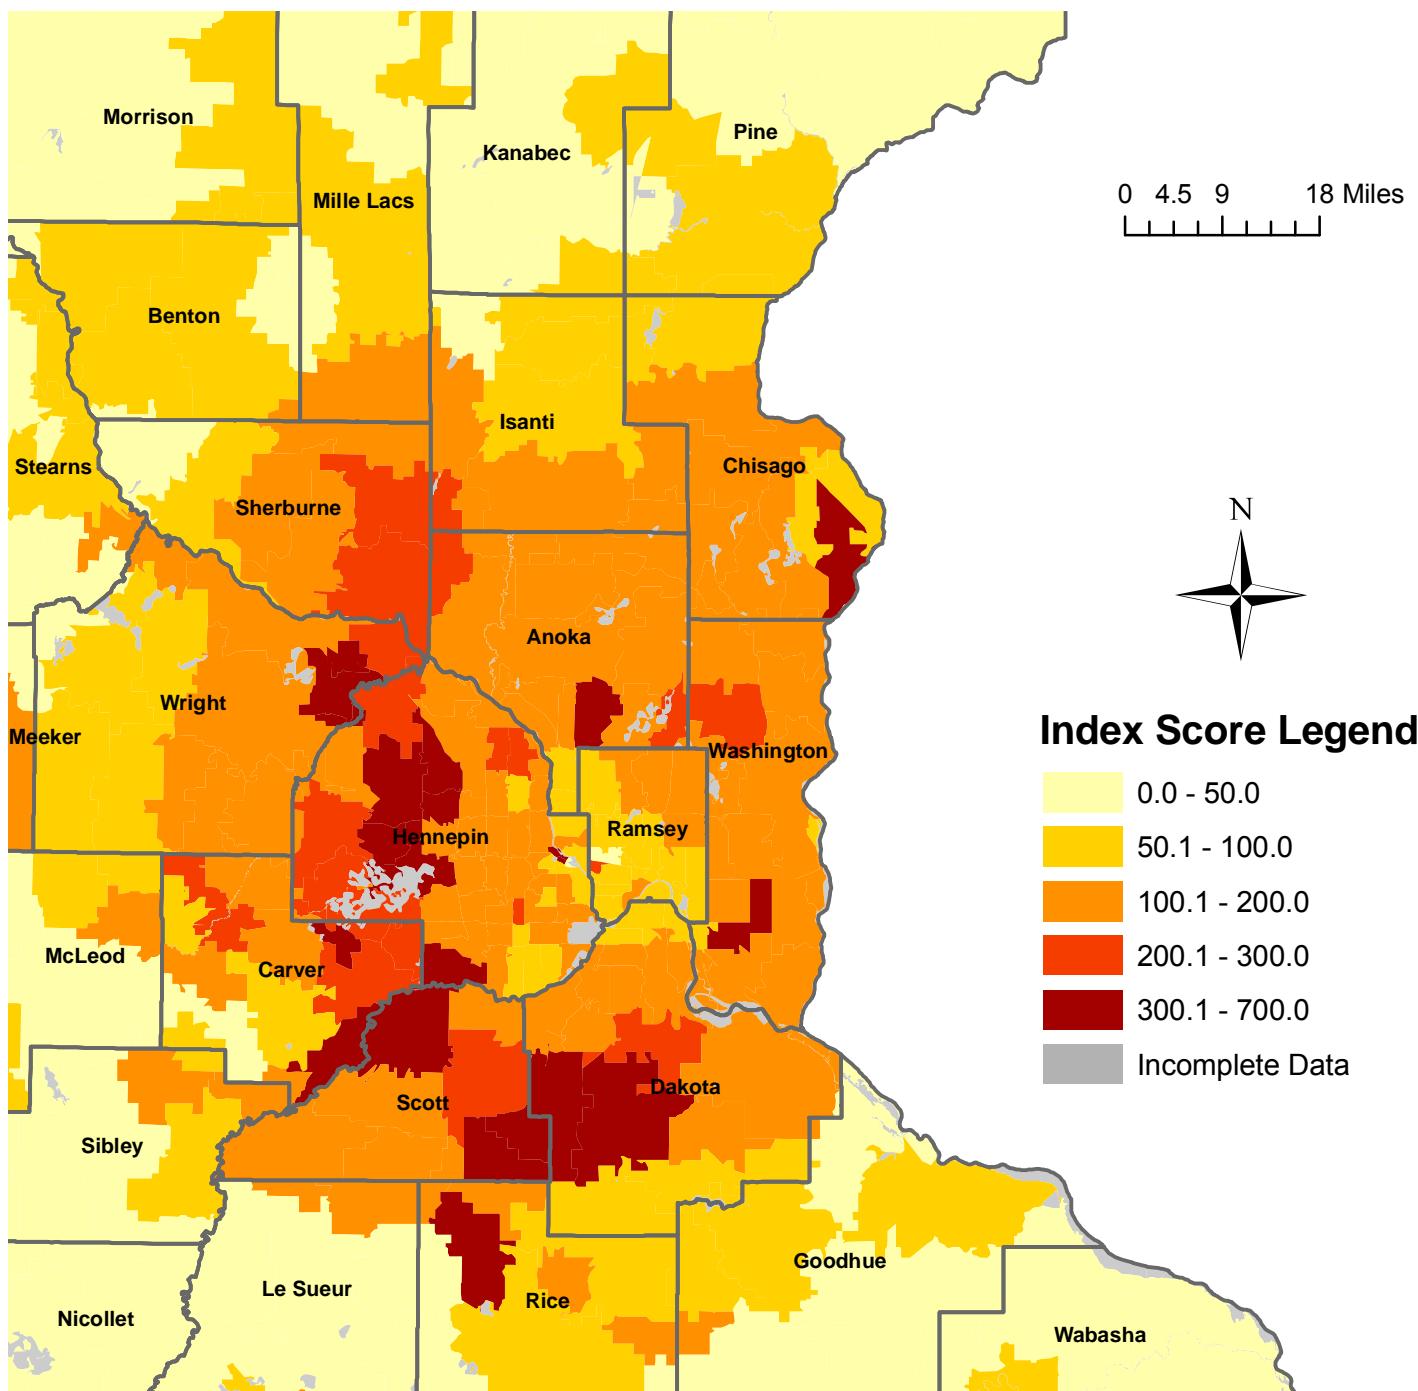

Source: Minnesota Housing analysis of data from LPS Applied Analytics

Notes:

1. The index is based on each zip code's non-prime ARM reset rate - the number of non-prime ARMs that have not yet reached their reset date divided by the number of households in each zip code. Each zip code's rate is divided by the statewide rate to compute the index score. An index score of 200 means the zip code's rate is twice the state rate, while an index score of 50 means the zip code's rate is half of the state rate. Non-prime loans include both subprime and near-prime loans.
2. Two important zip codes are new and cannot be mapped. Zip code 55130 in St. Paul has an index score of 106, and zip code 55054 in Scott County has an index score of 158.

## Map 4b Non-Prime ARMs Still to Reset Statewide Rate: Index = 100 March 2010

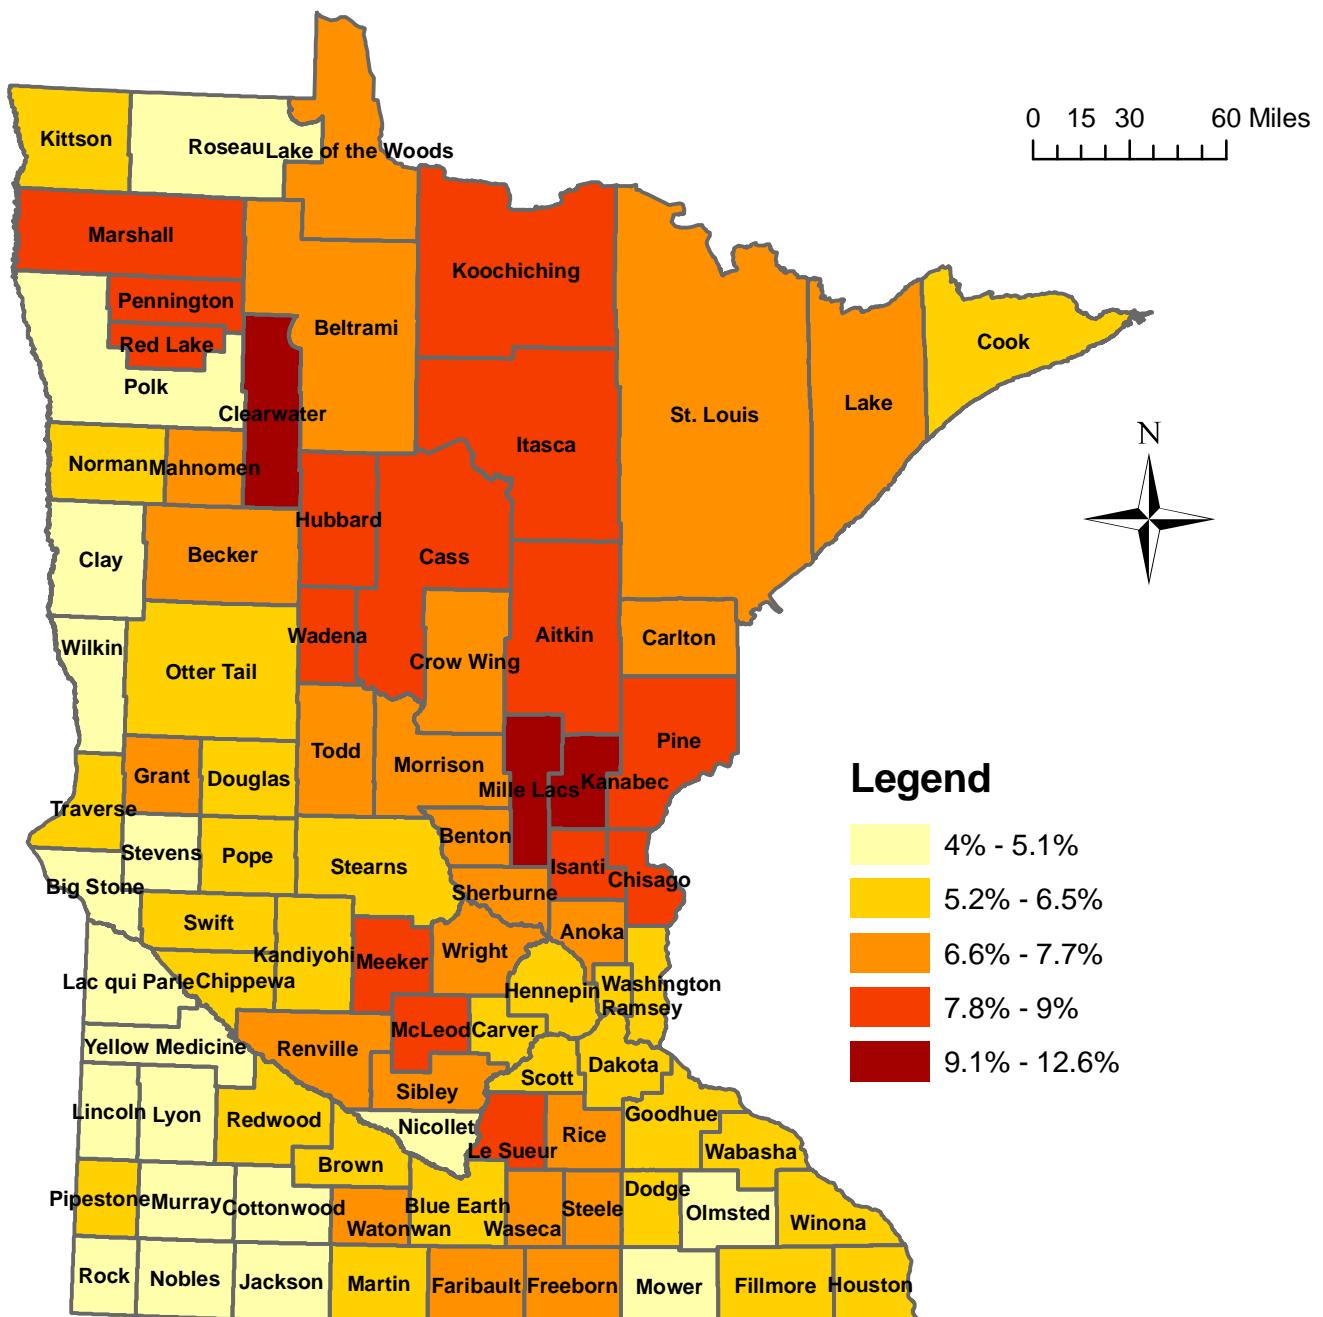

Source: Minnesota Housing analysis of data from LPS Applied Analytics

### Notes:

1. The index is based on each zip code's non-prime ARM reset rate - the number of non-prime ARMs that have not yet reached their reset date divided by the number of households in each zip code. Each zip code's rate is divided by the statewide rate to compute the index score. An index score of 200 means the zip code's rate is twice the state rate, while an index score of 50 means the zip code's rate is half of the state rate. Non-prime loans include both subprime and near-prime loans.
2. Two important zip codes are new and cannot be mapped. Zip code 55130 in St. Paul has an index score of 106, and zip code 55054 in Scott County has an index score of 158.
