

# Residential Foreclosures in Minnesota

*Winter 2012*

Planning, Analysis, and Evaluation

## Introduction

Minnesota’s foreclosure crisis has destabilized the housing market in many parts of the state, and the crisis continues. As part of its mission to advance affordable housing opportunities and foster strong communities, Minnesota Housing has established the prevention and remediation of foreclosures as one of its strategic priorities. To monitor the evolving crisis, Minnesota Housing purchases data on the delinquency and foreclosure status of residential mortgages from CoreLogic. These data help Minnesota Housing and its partners target their prevention and remediation efforts and effectively use resources in the hardest hit areas.

The following report provides key findings about the current state of the foreclosure crisis in Minnesota. The first section provides information about key statewide trends and the second section identifies foreclosure and delinquency hotspots around the state. Several maps accompany the discussion. Finally, the appendix includes a table that provides data for each residential zip code in the state.

### Report Structure

	<u>Page</u>
Current Statewide Trends	2
High Need Areas – Foreclosure Hotspots	3
Zip Code Maps	7
Map 1a – Loans in Post-Sale Foreclosure or REO (Statewide)	8
Map 1b – Loans in Post-Sale Foreclosure or REO (Metro)	9
Map 2a – Loans in Pre-Sale Foreclosure (Statewide)	10
Map 2b – Loans in Pre-Sale Foreclosure (Metro)	11
Map 3a – Loans in Delinquency (Statewide)	12
Map 3b – Loans in Delinquency (Metro)	13
Map 4 – Percentage Point Change in Unemployment Rate	14
Appendix A: Zip Code Tables – Index Scores	15

### Data Note

In this report, Minnesota Housing introduces the use of a different foreclosure dataset than used in previous quarterly reports. The agency now purchases statewide foreclosure data through CoreLogic at the zip code level. While the new dataset provides the same general information, there are nuances when comparing this report with past reports. For example, in previous reports, Minnesota Housing used a metric of loans in post-sale foreclosure or REO together, and the present data only includes REO.

## Current Statewide Trends

- While the magnitude of the foreclosures crisis may be starting to level off, the crisis is expected to continue.
  - The state's delinquency rate for residential mortgages has increased significantly over the late 2000s. Between the fourth quarter of 2005 and the fourth quarter of 2009, the percentage of mortgages that were at least 60 days past due quadrupled from 1.10% to 4.71%.<sup>1</sup> However, the delinquency rate declined during each quarter of 2010 and 2011. By the fourth quarter of 2011, the rate was down to 2.80%, which is still high by historical standards.
  - After rising from 6,500 in 2005 to 26,000 in 2008, the number of sheriff sales has been between 21,000 and 26,000 for the last four years, ending 2011 with 21,298 sales. While sheriff sales decreased by 17% from 2010, the number remains more than three times the number of sheriff sales than in 2005.<sup>2</sup>
- The foreclosure crisis continues to transform from a subprime crisis to a prime crisis.
  - Between the fourth quarter of 2007 (the height of the subprime crisis) and fourth quarter of 2011, the subprime market's share of residential mortgages in foreclosure dropped from 54% to 28% in Minnesota.
  - During the same period, the prime market's share increased from 40% to 55%.<sup>3</sup>
- With the continuing economic crisis and slow recovery, many families with prime loans are having difficulty making their mortgage payments.
  - Minnesota's unemployment rate jumped from a pre-recession low of 3.9% in May of 2006 to a high of 8.5% in May of 2009. Since May 2009, the unemployment rate has trended downward to 5.8% in December 2011, but has witnessed spikes back to 6.9% during this time<sup>4</sup>.
  - Many economists predict that unemployment will remain relatively high for at least another three years.<sup>5</sup>

---

<sup>1</sup> Mortgage Bankers Association, *National Delinquency Survey*. The delinquency rate applies to loans that are at least 60 days past due but have not started the foreclosure process.

<sup>2</sup> HousingLink, *2011 Foreclosures in Minnesota: A Report Based on County Sheriff Sales Data*, February 24, 2012; [http://www.housinglink.org/Files/ForeclosuresInMN\\_2011\\_Annual.pdf](http://www.housinglink.org/Files/ForeclosuresInMN_2011_Annual.pdf)

<sup>3</sup> Mortgage Bankers Association, *National Delinquency Survey*. These figures compare data from the 4<sup>th</sup> quarter of 2007 with the 4<sup>th</sup> quarter of 2011. Besides the prime and subprime foreclosures, the remaining foreclosures are loans from the Federal Housing Administration (FHA) or the U.S. Department of Veterans Affairs (VA).

<sup>4</sup> Minnesota Department of Employment and Economic Development, Local Area Unemployment Statistics, figures not seasonally adjusted.

<sup>5</sup> The Federal Reserve Bank of Philadelphia surveyed 45 economic forecasters in the 1st quarter of 2012 and summarized their projections; see <http://www.phil.frb.org/research-and-data/real-time-center/survey-of-professional-forecasters/2012/survq112.cfm>. Nationally, the unemployment rate is expected to be 8.3% in 2012, 7.9% in 2013, 7.4% in 2014, and 6.7% in 2015.

## High Need Areas – Foreclosure Hotspots

The foreclosure crisis has devastated some neighborhoods in Minnesota, while the impact has been much less extensive in others. Initially, the impact was the largest in the core neighborhoods of North Minneapolis and St. Paul’s East Side along with some outer ring communities just outside the seven-county metropolitan area, particularly in Wright, Sherburne, and Isanti counties. As the foreclosure crisis has evolved over time, it is becoming less concentrated in the center cities. While neighborhoods in Minneapolis and St. Paul still have a large number of foreclosed and REO (Real Estate Owned) properties, the relative concentration of troubled loans in the two central cities is lower than it has been.

To show this information, the attached maps display data on each zip code’s:

- REO Rate (reflecting foreclosures that have happened),
- In foreclosure rate (reflecting foreclosures that are happening), and
- Delinquency rate (reflecting foreclosures that may happen in the near future).<sup>6</sup>

For each rate, there is a statewide map and a map of the Twin Cities metropolitan area. The rates are based on the number of residential first-lien loans in each category divided by the number of households in each zip code.<sup>7</sup> For example, the delinquency rate is the number of loans in a zip code that are 90 or more days past due but not yet in foreclosure divided by the number of households in the zip code. The report also includes a map showing the change in county unemployment rates between November 2007 and December 2011. The “Great Recession” officially started in December of 2007. The map shows the counties that have been most heavily impacted by the recession.

Because the data that Minnesota Housing purchased from CoreLogic is proprietary, Minnesota Housing cannot publish specific rates or numbers, but it can publish an index score. To compute the index score, each zip code’s rate is divided by the statewide rate. Thus, the statewide rate is 100. If a zip code’s rate is twice as high as the statewide rate, it has an index score of 200. If a zip code’s rate is half the statewide rate, it has an index score of 50. The index scores show “hot spots” for problem loans.

---

<sup>6</sup> A loan is in foreclosure when legal documents have been filed to start the foreclosure process but a sheriff sale has not occurred. Seriously delinquent loans are mortgages delinquent by 90 days or more. An REO property is owned by the lender after the sheriff sale.

<sup>7</sup> Ideally, the rates should be calculated as the number of loans in each category divided by the number of residential parcels in each zip code. Typically, there is one first-lien loan on each residential parcel, and one foreclosure affects one parcel. However, parcel data by zip code is not available. As a proxy for residential parcels, Minnesota Housing used the number of households in each zip code. Zip codes with a higher proportion of multifamily housing (often in urban areas) have proportionally more households per residential parcel than other zip codes. Thus, the rates used in this report (based on problem loans per household) understate the delinquency and foreclosure problem in zip codes with a higher proportion of multifamily housing. (The denominator of the calculation is disproportionately high.) The number of 2010 households in each zip code comes from the 2010 decennial US Census.

To account for the uncertainty in the resulting rates and index scores, Table 1 in the appendix provides rate index scores in 25 point increments, rather than specific figures. Specific numbers would reflect an inappropriate level of precision and accuracy.

As shown in the maps:

- There is a high rate of REOs in the Twin Cities metropolitan area and its surrounding counties, with very high rates (3 times state rate) in the city of Brooklyn Park in Hennepin County, and portions of Isanti, Sherburne, Chisago, Dakota and Rice Counties. High rates (2-3 times state rate) are found in nearby areas, and in portions of the southeastern region of the state including areas in Dodge, Freeborn, and Steele Counties (See Maps 1a and 1b.)
- The geographic distribution of loans in foreclosure is quite similar to REOs overall, but pockets of very high rates are somewhat less dispersed and found in Isanti and Hennepin Counties (Brooklyn Park). (See Maps 2a and 2b.)
- Statewide, the geographic distribution of the highest delinquency rates is similar to the distribution of the highest foreclosures rates, but the problem is less concentrated overall, with no zip codes witnessing a very high rate (3x state rate and higher). Further, the delinquency index scores in Minneapolis and St. Paul are generally lower than their foreclosure scores. (See maps 3a and 3b.)
- Finally, the increase in unemployment in north central Minnesota since the recession began may be leading to increased delinquencies and foreclosures. The unemployment data is available by county, rather than zip code and displays change in unemployment rate since 2007. (See Map 4.)

When assessing the maps and data, four key points need to be kept in mind:

- While some communities with a large proportion of early foreclosures may have passed the peak of their crisis, the crisis continues in these areas. These communities still need to recover from the destabilizing effects of all the foreclosures that have already occurred. The data in this report apply to the status of loans being serviced in December of 2011. Previously foreclosed properties that are in the hands of a new homeowner or investor are no longer classified as foreclosed. Thus, the data does not completely capture the magnitude of the foreclosure crisis for communities that have already had a concentration of loans go completely through the foreclosure process.
- When assessing need, the foreclosure, delinquency, and REO rates are important, but the number of households that the high rate affects is also important. For example, foreclosure and REO index scores for zipcode 55412 (in North Minneapolis) are near 300. In addition, this zip code has over 8,000 households. In contrast, some of the other high score zip codes have less than 1,000 households. Table 1 in the appendix provides not only the index scores for each zip code but also the number of households.
- Some zip codes may show up as having a high delinquency or foreclosure rate because they have a small number of households. If a zip code has only a few hundred households, the addition of a foreclosure or two can have a dramatic effect on the foreclosure rate. To minimize this small zip code effect, the analysis excludes zip codes with fewer than 200 households. In the maps and tables, these zip codes are coded as having “incomplete data.”

- Specific neighborhoods within a zip code may have a very high rate of delinquencies and foreclosures even when the zip code has a lower index score. Parts of the zip code may have a very high rate, while other parts of the same zip code may have a very low rate, giving the zip code a lower index score overall. Thus, the zip-code index scores and maps do not identify all the high need areas around the state.

Minnesota Housing will continue to monitor the evolving foreclosure crisis in Minnesota.
