

Residential Foreclosures in Minnesota

Summer 2012

Planning, Research, and Evaluation

Introduction

Minnesota’s foreclosure crisis has destabilized the housing market in many parts of the state, and the crisis continues. As part of its mission to finance affordable housing for low- and moderate – income households while fostering strong communities, Minnesota Housing has established foreclosure prevention and community recovery as one of its strategic priorities. To monitor the evolving crisis, Minnesota Housing purchases data on the delinquency and foreclosure status of residential mortgages from CoreLogic. These data help Minnesota Housing and its partners target their prevention and recovery efforts and effectively use resources in the hardest hit areas.

The following report provides key findings about the current state of the foreclosure crisis in Minnesota. The first section provides information about key statewide trends and the second section identifies foreclosure and delinquency hotspots around the state. Several maps accompany the discussion. Finally, the appendix includes a table that provides data for each residential zip code in the state.

Map 2b – Loans in Foreclosure (Metro)	11
Map 3a – Loans in Delinquency (Statewide)	12
Map 3b – Loans in Delinquency (Metro)	13
Appendix A: Zip Code Tables – Index Scores	15

Current Statewide Trends

- While the magnitude of the foreclosures crisis is starting to decline, the crisis is expected to continue.
 - The state's delinquency rate for residential mortgages increased significantly during the late 2000s. Between the fourth quarter of 2005 and the fourth quarter of 2009, the percentage of mortgages that were at least 60 days past due quadrupled from 1.10% to 4.71%.¹ However, the delinquency rate has declined at a moderate rate since 2010, with the current rate (for 2nd Quarter 2012) of 2.4%, which is still high by historical standards.
 - After rising from 6,500 in 2005 to 26,000 in 2008, the number of sheriff sales has been between 21,000 and 26,000 for the last four years, ending 2011 with 21,298 sales. While sheriff sales decreased by 17% from 2010, the number remains more than three times the number of sheriff sales than in 2005.²
- The foreclosure crisis has transformed from a subprime crisis to a prime crisis.
 - Between the fourth quarter of 2007 (the height of the subprime crisis) and second quarter of 2012, the subprime market's share of residential mortgages in foreclosure dropped from 54% to 26% in Minnesota.
 - During the same period, the prime market's share increased from 40% to 55%.³
- With the continuing slow recovery from the Great Recession, many families with prime loans are having difficulty making their mortgage payments.
 - Minnesota's unemployment rate jumped from a pre-recession low of 3.9% in May of 2006 to a high of 8.5% in May of 2009. Since May 2009, the unemployment rate has trended downward to 5.8% in June 2012, but has witnessed spikes back to 6.9% during this time⁴.
 - Many economists predict that unemployment will remain relatively high for at least another three years.⁵

¹ Mortgage Bankers Association, *National Delinquency Survey*. The delinquency rate applies to loans that are at least 60 days past due but have not started the foreclosure process.

² HousingLink, *2011 Foreclosures in Minnesota: A Report Based on County Sheriff Sales Data*, February 24, 2012; http://www.housinglink.org/Files/ForeclosuresInMN_2011_Annual.pdf

³ Mortgage Bankers Association, *National Delinquency Survey*. These figures compare data from the 4th quarter of 2007 with the 2nd quarter of 2012. Besides the prime and subprime foreclosures, the remaining foreclosures are loans from the Federal Housing Administration (FHA) or the U.S. Department of Veterans Affairs (VA).

⁴ Minnesota Department of Employment and Economic Development, Local Area Unemployment Statistics, figures not seasonally adjusted.

⁵ The Federal Reserve Bank of Philadelphia surveyed 45 economic forecasters in the 2nd quarter of 2012 and summarized their projections; see <http://www.phil.frb.org/research-and-data/real-time-center/survey-of-professional-forecasters/2012/survq212.cfm>. Nationally, the unemployment rate is expected to be 8.1% in 2012, 7.7% in 2013, 7.2% in 2014, and 6.6% in 2015.

High Need Areas – Foreclosure Hotspots

The foreclosure crisis has devastated some neighborhoods in Minnesota, while the impact has been much less extensive in others. Initially, the impact was the largest in the core neighborhoods of North Minneapolis and St. Paul’s East Side along with some outer ring communities just outside the seven-county metropolitan area, particularly in Wright, Sherburne, and Isanti counties. As the foreclosure crisis has evolved over time, it is becoming less concentrated in the center cities. While neighborhoods in Minneapolis and St. Paul still have a large number of foreclosed and REO (Real Estate Owned) properties, the relative concentration of troubled loans in the two central cities is lower than it has been.

To show this information, the attached maps display data on each zip code’s:

- REO Rate (reflecting foreclosures that have happened),
- In foreclosure rate (reflecting foreclosures that are happening), and
- Delinquency rate (reflecting foreclosures that may happen in the near future).⁶

For each rate, there is a statewide map and a map of the Twin Cities metropolitan area. The rates are based on the number of residential first-lien loans in each category divided by the number of households in each zip code.⁷ For example, the delinquency rate is the number of loans in a zip code that are 90 or more days past due but not yet in foreclosure divided by the number of households in the zip code.

Because the data that Minnesota Housing purchased from CoreLogic is proprietary, Minnesota Housing cannot publish specific rates or numbers, but it can publish an index score. To compute the index score, each zip code’s rate is divided by the statewide rate. Thus, the statewide rate is 100. If a zip code’s rate is twice as high as the statewide rate, it has an index score of 200. If a zip code’s rate is half the statewide rate, it has an index score of 50. The index scores show “hot spots” for problem loans.

As shown in the maps:

⁶ A loan is in foreclosure when legal documents have been filed to start the foreclosure process but a sheriff sale has not occurred. Seriously delinquent loans are mortgages delinquent by 90 days or more. An REO property is owned by the lender after the sheriff sale.

⁷ Ideally, the rates should be calculated as the number of loans in each category divided by the number of residential parcels in each zip code. Typically, there is one first-lien loan on each residential parcel, and one foreclosure affects one parcel. However, parcel data by zip code is not available. As a proxy for residential parcels, Minnesota Housing used the number of households in each zip code. Zip codes with a higher proportion of multifamily housing (often in urban areas) have proportionally more households per residential parcel than other zip codes. Thus, the rates used in this report (based on problem loans per household) understate the delinquency and foreclosure problem in zip codes with a higher proportion of multifamily housing. (The denominator of the calculation is disproportionately high.) The number of 2010 households in each zip code comes from the 2010 decennial US Census.

To account for the uncertainty in the resulting rates and index scores, Table 1 in the appendix provides rate index scores in 25 point increments, rather than specific figures. Specific numbers would reflect an inappropriate level of precision and accuracy.

- Areas with high rates of REO can be found across the state. Very high rates of REOs (2.5 times state rate) are found in pockets of the Twin Cities metropolitan area including Minneapolis, Brooklyn Park, Dayton, and Elko New Market. In other regions of Greater Minnesota, smaller pockets of very high rates of REO can be found in several counties, including Aitkin and Carlton in the Northeast, Norman and Beltrami in the Northwest, and Steele, Dodge, Olmsted and Wabasha in the Southeast (See Maps 1a and 1b.)
- The geographic distribution of loans in foreclosure follows a similar pattern to the REO rate, but pockets of very high rates of foreclosure (2.5 times greater than the state) are not as widely dispersed. In fact, the western half of the state has very few pockets of higher rates. As with REO rates, high rates of foreclosure are found in North Minneapolis and Brooklyn Park in the Metro, and more significantly in northern Anoka, Isanti, and Sherburne counties. A portion of Lake County in the Northeastern region of the state also has very high rates of foreclosure. (See Maps 2a and 2b.)
- Statewide, the geographic distribution of the highest delinquency rates is very similar to the distribution of the highest foreclosures rates, but the highest rates are more concentrated in Sherburne, and Isanti counties. In addition, pockets of Wright, McLeod, Scott and Rice Counties experience very high rates of delinquency compared to the state. Further, the delinquency index scores in Minneapolis and St. Paul are generally lower than their foreclosure scores. (See maps 3a and 3b.)

When assessing the maps and data, four key points need to be kept in mind:

- While some communities with a large proportion of early foreclosures may have passed the peak of their crisis, the crisis continues in these areas. These communities still need to recover from the destabilizing effects of all the foreclosures that have already occurred. The data in this report apply to the status of loans being serviced in June of 2012. Previously foreclosed properties that are in the hands of a new homeowner or investor are no longer classified as foreclosed. Thus, the data does not completely capture the magnitude of the foreclosure crisis for communities that have already had a concentration of loans go completely through the foreclosure process.
- When assessing need, the foreclosure, delinquency, and REO rates are important, but the number of households that the high rate affects is also important. For example, foreclosure and REO index scores for zipcode 55412 (in North Minneapolis) are near 300. In addition, this zip code has over 8,000 households. In contrast, some of the other high score zip codes have less than 1,000 households. Table 1 in the appendix provides not only the index scores for each zip code but also the number of households.
- Some zip codes may show up as having a high delinquency or foreclosure rate because they have a small number of households. If a zip code has only a few hundred households, the addition of a foreclosure or two can have a dramatic effect on the foreclosure rate. To minimize this small zip code effect, the analysis excludes zip codes with fewer than 200 households. In the maps and tables, these zip codes are coded as having “incomplete data.”

- Specific neighborhoods within a zip code may have a very high rate of delinquencies and foreclosures even when the zip code has a lower index score. Parts of the zip code may have a very high rate, while other parts of the same zip code may have a very low rate, giving the zip code a lower index score overall. Thus, the zip-code index scores and maps do not identify all the high need areas around the state.

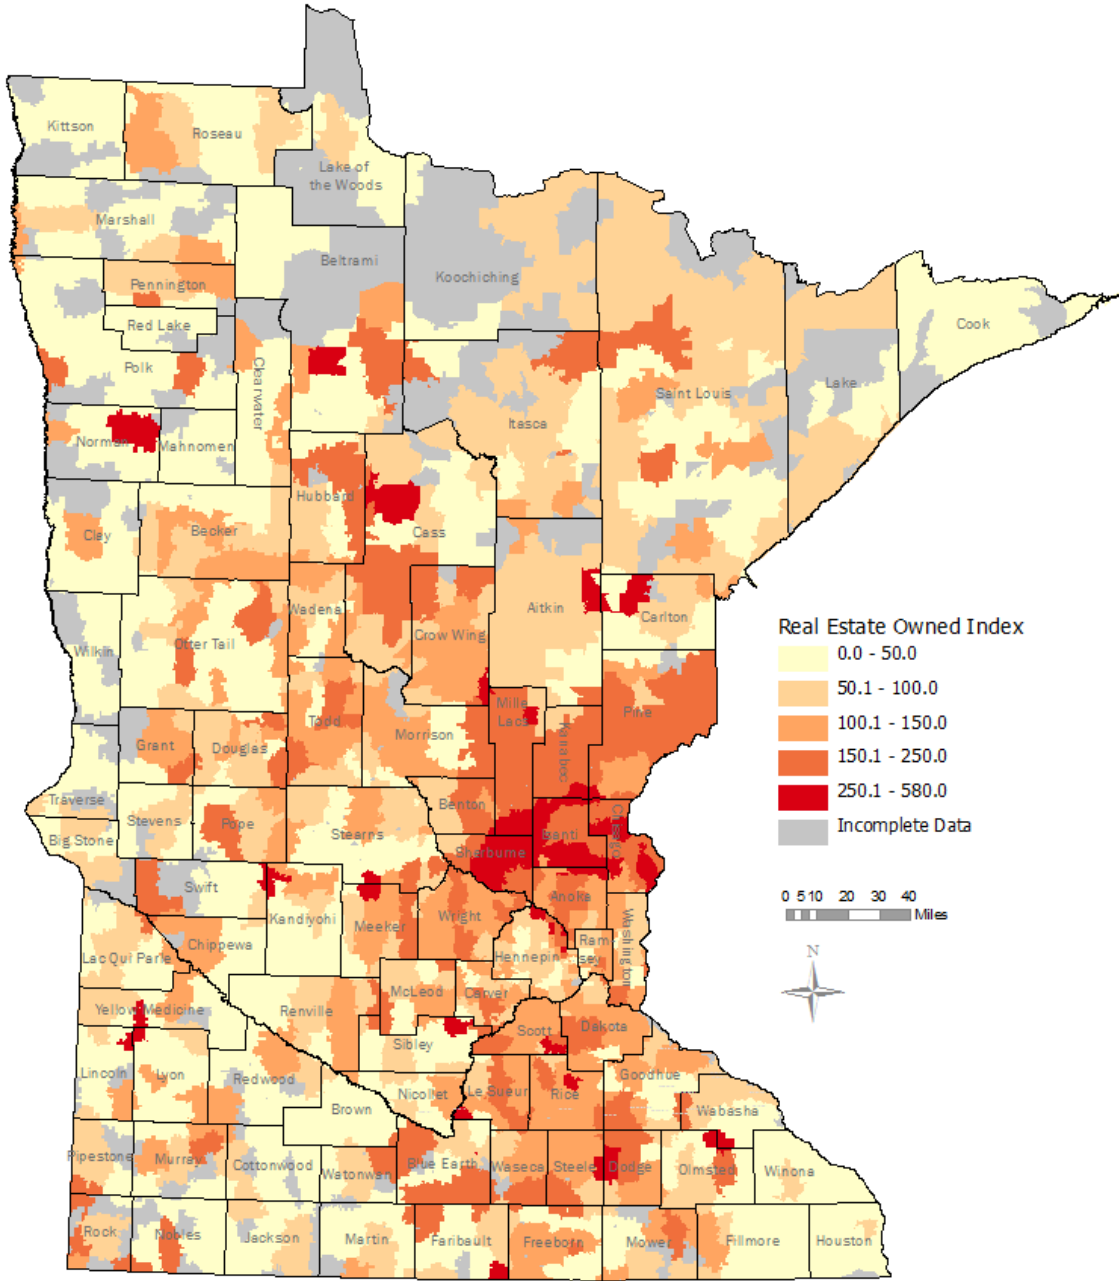

Minnesota Housing will continue to monitor the evolving foreclosure crisis in Minnesota.

Zip Code Maps

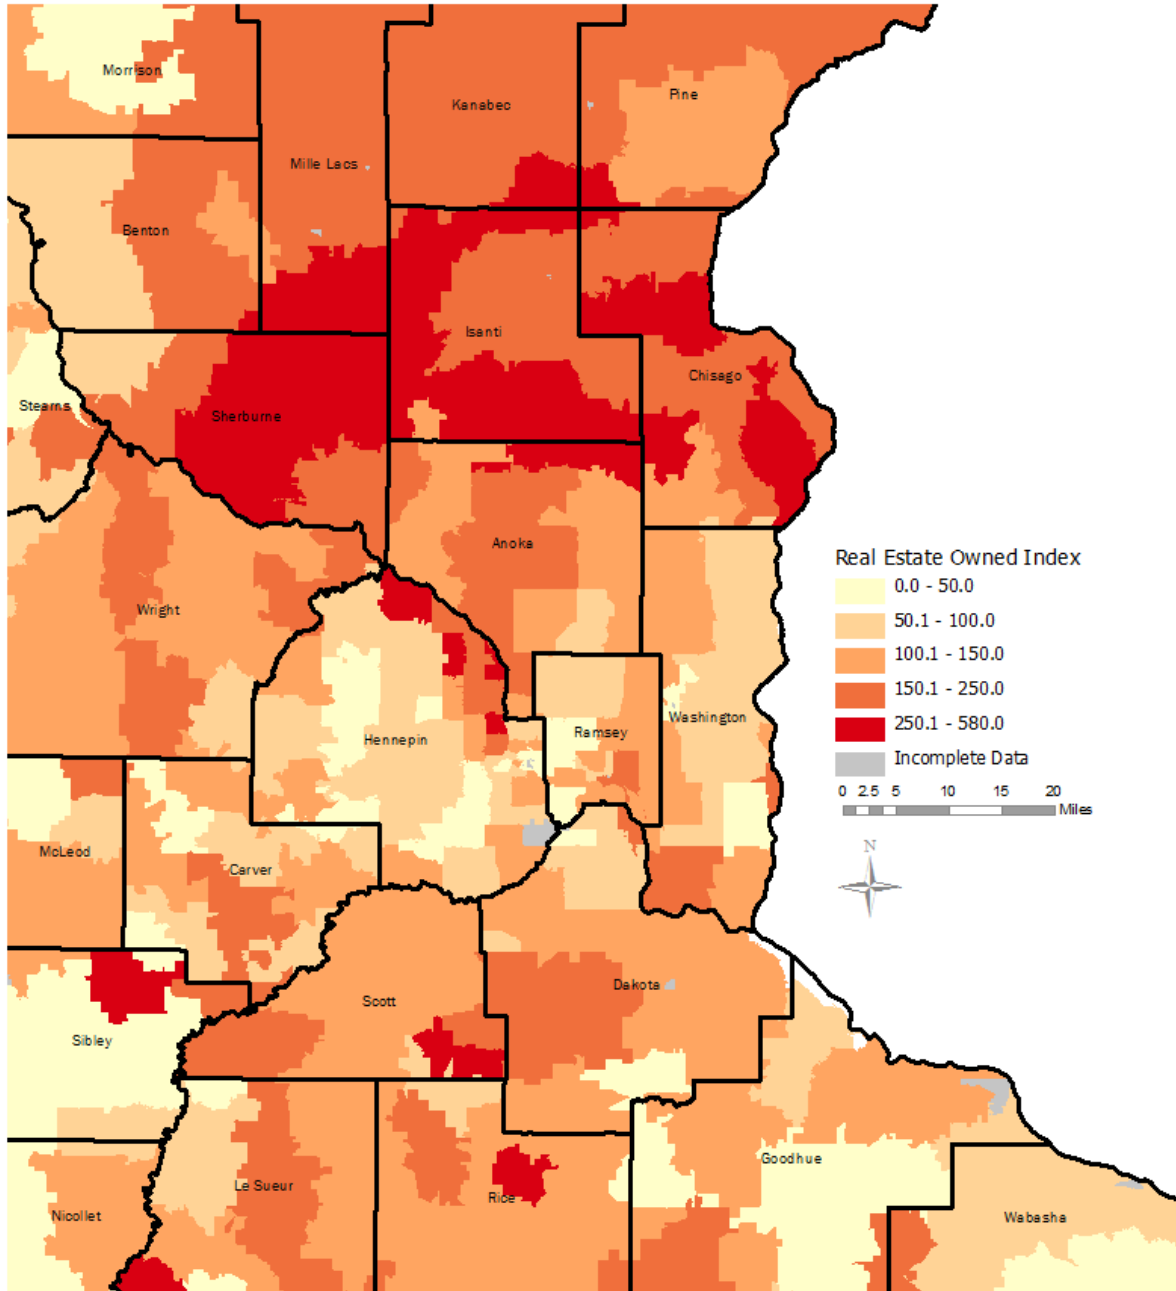

Map 1a
Loans in REO
Statewide-Rate: Index = 100
June 2012

Source: Minnesota Housing analysis of data from CoreLogic.
Notes: The index is based on each zip code’s REO rate – the number of loans that are in REO divided by the number of households in each zip code. Each zip code’s rate is divided by the statewide rate to compute the index score. An index score of 200 means the zip code’s rate is twice the state rate, while an index score of 50 means the zip code’s rate is half the state rate.

Map 1b
Loans in REO
Statewide-Rate: Index = 100
June 2012

Source: Minnesota Housing analysis of data from CoreLogic.

Notes: The index is based on each zip code's REO rate – the number of loans that are in REO divided by the number of households in each code. Each zip code's rate is divided by the statewide rate to compute the index score. An index score of 200 means the zip code's rate is twice the state rate, while an index score of 50 means the zip code's rate is half the state rate.

Map 2a
Loans in Foreclosure
Statewide-Rate: Index = 100
June 2012

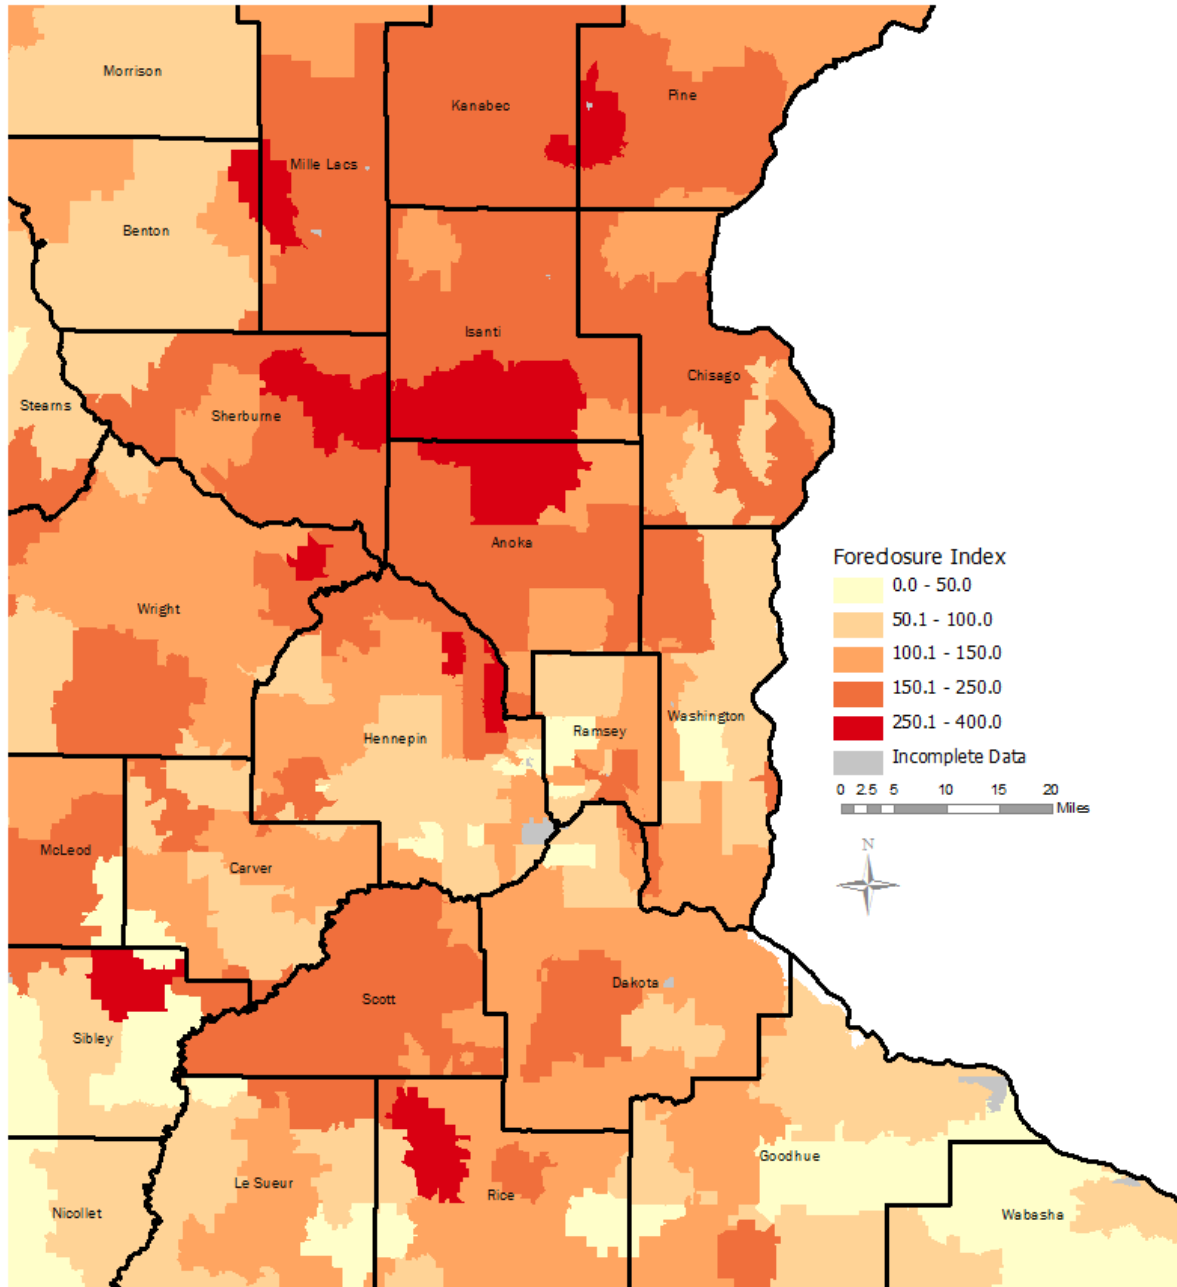

Source: Minnesota Housing analysis of data from CoreLogic.

Notes: The index is based on each zip code’s foreclosure rate – the number of loans that are in foreclosure divided by the number of households in each zip code. Each zip code’s rate is divided by the statewide rate to compute the index score. An index score of 200 means the zip code’s rate is twice the state rate, while an index score of 50 means the zip code’s rate is half the state rate.

Map 2b
Loans in Foreclosure
Statewide-Rate: Index = 100
June 2012

Source: Minnesota Housing analysis of data from CoreLogic.

Notes: The index is based on each zip code's foreclosure rate – the number of loans that are in foreclosure divided by the number of households in each zip code. Each zip code's rate is divided by the statewide rate to compute the index score. An index score of 200 means the zip code's rate is twice the state rate, while an index score of 50 means the zip code's rate is half the state rate.

Map 3a
Loans in Delinquency
Statewide-Rate: Index = 100
June 2012

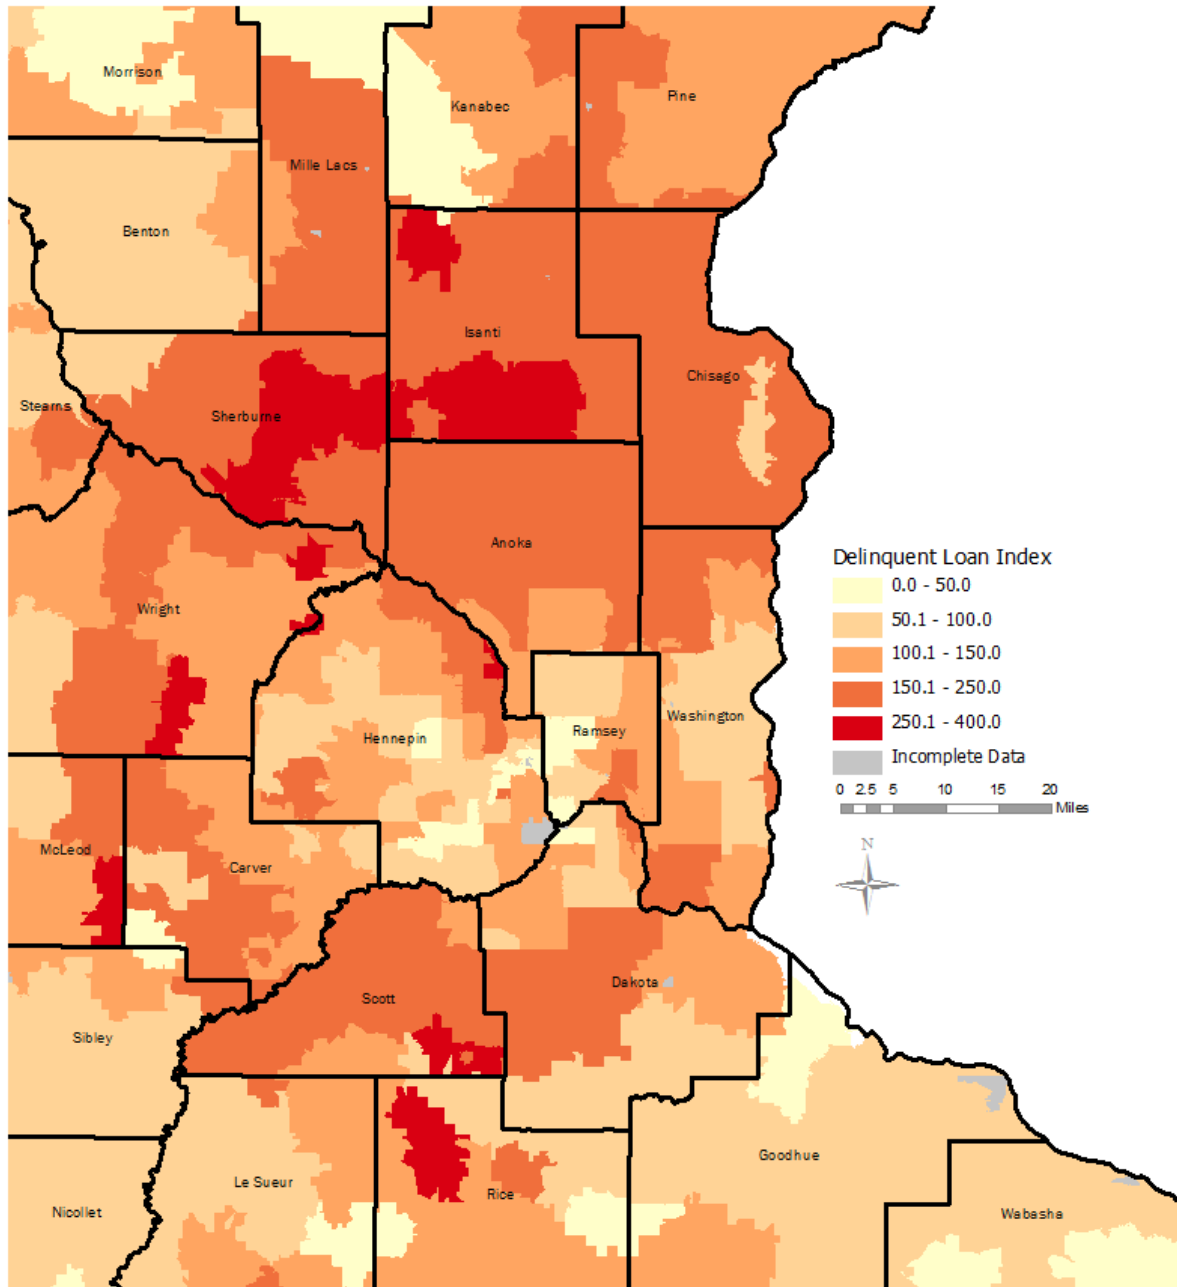

Source: Minnesota Housing analysis of data from CoreLogic.

Notes: The index is based on each zip code’s delinquency rate – the number of loans that are 90 or more days past due divided by the number of households in each zip code. Each zip code’s rate is divided by the statewide rate to compute the index score. An index score of 200 means the zip code’s rate is twice the state rate, while an index score of 50 means the zip code’s rate is half the state rate.

Map 3b
Loans in Delinquency
Statewide-Rate: Index = 100
June 2012

Source: Minnesota Housing analysis of data CoreLogic.

Notes: The index is based on each zip code's delinquency rate – the number of loans that are 90 or more days past due divided by the number of households in each zip code. Each zip code's rate is divided by the statewide rate to compute the index score. An index score of 200 means the zip code's rate is twice the state rate, while an index score of 50 means the zip code's rate is half the state rate.
