

# Residential Foreclosures in Minnesota

*Winter 2014*

Planning, Research, and Evaluation

## Introduction

In 2013, Minnesota's foreclosure crisis subsided to near pre-recessionary levels. However, the crisis has destabilized the housing market in many parts of the state, and community recovery has not been level across all parts of the state. As part of its mission to finance affordable housing for low- and moderate-income households while fostering strong communities, Minnesota Housing established foreclosure prevention and community recovery as one of its strategic priorities. To monitor the evolving crisis, Minnesota Housing purchases data on the delinquency and foreclosure status of residential mortgages from CoreLogic. These data help Minnesota Housing and its partners target their prevention and recovery efforts and effectively use resources in the hardest hit areas.

The following report provides key findings about the current state of the foreclosure crisis in Minnesota. The first section provides information about statewide trends and the second section identifies foreclosure and delinquency hotspots around the state. Several maps accompany the discussion. Finally, the appendix includes a table that provides data for each residential zip code in the state.

## Current Statewide Trends

- Statewide (and nationwide) foreclosures are declining.
  - The total number of U.S. properties completing foreclosures and being repossessed by Lenders (Real Estate Owned, or REO), dropped by 40% between January 2013 and January 2014, to the lowest levels since July 2007<sup>1</sup>.
  - Minnesota ranks 6<sup>th</sup> among states in the lowest percentage of homes in foreclosure<sup>2</sup>. Nationwide, foreclosure inventory is over three times the rate in Minnesota.
- While the magnitude of the foreclosures crisis is declining, delinquencies remain above historic standards.
  - The state's delinquency rate for residential mortgages increased significantly during the late 2000s. Between the fourth quarter of 2005 and the fourth quarter of 2009, the percentage of mortgages that were at least 60 days past due quadrupled from 1.10% to 4.71%.<sup>3</sup> However, the delinquency rate has declined at a moderate rate since 2010, with a current rate (4th Quarter 2013) of 2.96%, which is still high by historical standards.
  - Sheriff sales are decreasing each year, but remain elevated from pre-foreclosure crisis. Sheriff Sales in 2013 dropped by 34% since the previous year<sup>4</sup>.
- The impact of unemployment on foreclosures is lessening as the state continues to recover from the Great Recession.
  - Minnesota's unemployment rate jumped from a pre-recession low of 3.9% in May of 2006 to a high of 8.3% in May of 2009. Since May 2009, the unemployment rate has trended downward to 4.6% in December 2013.<sup>5</sup>
  - Many economists predict that unemployment will continue to trend lower over the next three years.<sup>6</sup>

Nationally, the unemployment rate is expected to be 7.5% in 2013, 7.0% in 2014, 6.4% in 2015, and 6.0% in 2016.

## High Need Areas – Foreclosure Hotspots

The foreclosure crisis has had a significant impact on some neighborhoods in Minnesota, while the impact has been much less extensive in others. Initially, the impact was the largest in the core neighborhoods of North Minneapolis and St. Paul's East Side, along with some communities north of the Twin Cities seven-county metropolitan area, particularly in Wright, Sherburne, and Isanti counties. As the foreclosure crisis has evolved over time and declined statewide, it became less concentrated in the center cities. While neighborhoods in Minneapolis and St. Paul still have a large number of foreclosed and REO (Real Estate Owned) properties relative to the state, the concentration of troubled loans in the two central cities is lower than it has been.

To show this information, the attached maps display data on each zip code's:

- REO rate (reflecting foreclosures that have happened),
- In foreclosure rate (reflecting foreclosures that are happening),
- Delinquency rate (reflecting foreclosures that may happen in the near future),<sup>7</sup> and
- Change in the number of foreclosures from previous year (for zip codes that have a foreclosure rate above the current statewide rate presently).

For each rate, there is a statewide map and a map of the Twin Cities metropolitan area. The rates are based on the number of residential first-lien loans in each category divided by the number of households in each zip code.<sup>8</sup> For example, the delinquency rate is the number of loans in a zip code that are 90 or more days past due but not yet in foreclosure divided by the number of households in the zip code.

Because the data that Minnesota Housing purchases from CoreLogic is proprietary, Minnesota Housing cannot publish specific rates or numbers, but it can publish an index score. To compute the index score, each zip code's rate is divided by the statewide rate. Thus, the statewide rate is 100. If a zip code's rate is twice as high as the statewide rate, it has an index score of 200. If a zip code's rate is half the statewide rate, it has an index score of 50. The index scores show "hot spots" for problem loans.

---

<sup>7</sup> A loan is in foreclosure when legal documents have been filed to start the foreclosure process but a sheriff sale has not occurred. Seriously delinquent loans are mortgages delinquent by 90 days or more. An REO property is owned by the lender after the sheriff sale.

<sup>8</sup> Ideally, the rates should be calculated as the number of loans in each category divided by the number of residential parcels in each zip code. Typically, there is one first-lien loan on each residential parcel, and one foreclosure affects one parcel. However, parcel data by zip code is not available. As a proxy for residential parcels, Minnesota Housing used the number of households in each zip code. Zip codes with a higher proportion of multifamily housing (often in urban areas) have proportionally more households per residential parcel than other zip codes. Thus, the rates used in this report (based on problem loans per household) understate the delinquency and foreclosure problem in zip codes with a higher proportion of multifamily housing. (The denominator of the calculation is disproportionately high.) The number of 2010 households in each zip code comes from the 2010 decennial US Census.

To account for the uncertainty in the resulting rates and index scores, Table 1 in the appendix provides rate index scores in 25 point increments, rather than specific figures. Specific numbers would reflect an inappropriate level of precision and accuracy.

As shown in the maps:

- **Areas with high REO rates can be found across the state.** Very high REO rates (2.5 times the statewide rate) are found in pockets of the Twin Cities seven-county metropolitan area including Minneapolis, Brooklyn Park, Dayton, Jordan, Elko New Market, and Mayer. Counties north of the Twin Cities and into central Minnesota form the largest concentrations of REO properties statewide, including Chisago, Isanti, Pine, and Sherburne Counties. In other regions of Greater Minnesota, smaller pockets of very high rates of REOs are found scattered throughout the state. (See Maps 1a and 1b.)
- **The geographic distributions of the highest rates of loans in foreclosure are clustered in communities developed during the peak of the housing boom, but also continue to be prevalent in the core cities in the metro.** The geographic distribution of loans in foreclosure follows a similar pattern to the REO rate, but pockets of very high foreclosure rates (2.5 times greater than the statewide rate) are not as widely dispersed. The western and northern parts of the state have very few pockets of higher rates. Concentrations of loans in foreclosure are found most predominantly in Chisago, Isanti, and Sherburne Counties in Minnesota. (See Maps 2a and 2b.)
- **The geographic distribution of the highest delinquency rates is even more concentrated than the distribution of loans in foreclosure.** The highest rates are concentrated in Sherburne and Isanti counties in Greater Minnesota and in Brooklyn Park and Minneapolis in the Twin Cities Metro. (See maps 3a and 3b.)
- **For some areas with high rates of troubled loans, foreclosures are still on the rise, relative to an overall decline in foreclosures statewide.** For areas that have currently high rates of troubled loans (1.5 times greater than the state), some experienced declines in the rate of troubled loans since December 2012, while other areas have experienced increases. Areas with an increasing foreclosure problem relative to the state in the last year include:
  - Suburban Twin Cities Metropolitan communities of Brooklyn Park, Brooklyn Center, Bethel, East Bethel, Elko New Market, and Lakeland Shores,
  - several communities in counties surrounding the Twin Cities seven-county metropolitan area including Sherburne, Wright, Isanti, Mille Lacs, Rice and Sibley, and
  - Individual zip codes within Beltrami, Crow Wing, Todd, Pine, and Olmsted Counties.

When assessing the maps and data, four key points need to be kept in mind:

- While some communities with a large proportion of foreclosures early in the crisis may have passed the peak of their crisis, the problems continue in these areas. These communities still need to recover from the destabilizing effects of all the foreclosures that have already occurred. The data in this report apply to the status of loans being serviced in December 2013. Previously foreclosed properties that are in the hands of a new homeowner or investor are no longer classified as foreclosed. Thus, the data does not completely capture the magnitude of the foreclosure crisis for communities that have already had a concentration of loans go completely through the foreclosure process.
- When assessing need, the foreclosure, delinquency, and REO rates are important, but the number of households that the high rate affects is also important. For example, foreclosure and REO index scores for zipcode 55412 (in North Minneapolis) are over 250. In addition, this zip code has over 8,000 households. In contrast, some of the other high score zip codes have less than 1,000 households. Table 1 in the appendix provides not only the index scores for each zip code but also the number of households.
- Some zip codes may show up as having a high delinquency or foreclosure rate because they have a small number of households. If a zip code has only a few hundred households, the addition of a foreclosure or two can have a dramatic effect on the foreclosure rate. To minimize this small zip code effect, the analysis excludes zip codes with fewer than 200 households. In the maps and tables, these zip codes are coded as having “incomplete data.”
- Specific neighborhoods within a zip code may have a very high rate of delinquencies and foreclosures even when the zip code has a lower index score. Parts of the zip code may have a very high rate, while other parts of the same zip code may have a very low rate, giving the zip code a lower index score overall. Thus, the zip-code index scores and maps do not identify all the high need areas around the state.

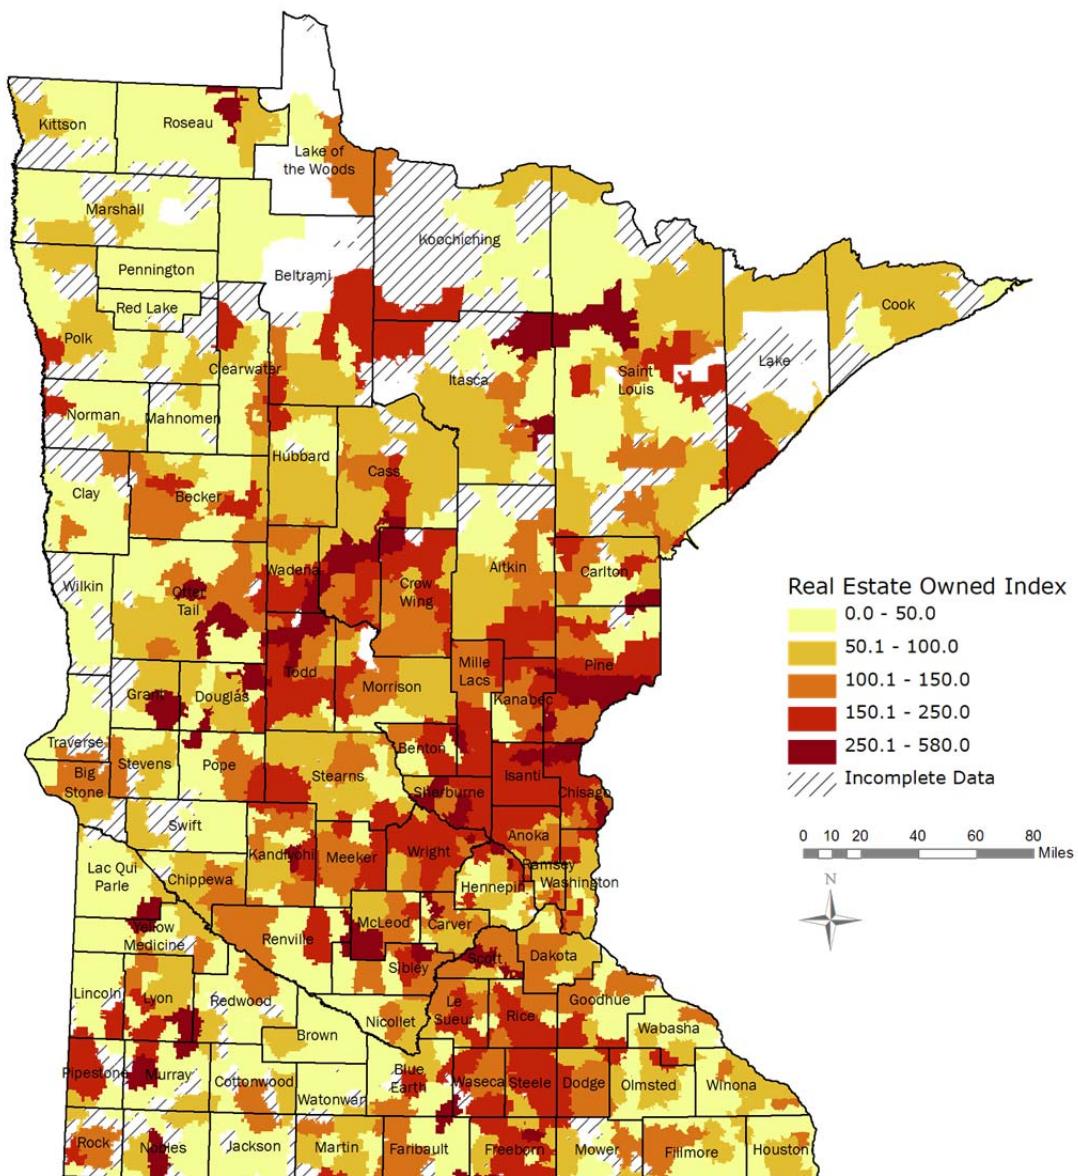

Minnesota Housing will continue to monitor the evolving foreclosure crisis in Minnesota.

Notes: The change in index is based on each zip code's composite rate of foreclosure, REO and delinquencies in December 2012 and December 2013. Each zip code's rate is divided by the statewide rate to compute the index score. A decrease in index score means the zip code's rate of foreclosure has decreased relative to the state's rate in the past year, while an increase in index score means the zip code's rate of foreclosure has increased relative to the state's rate in the past year.

Notes: The change in index is based on each zip code's composite rate of foreclosure, REO and delinquencies in September 2012 and September 2013. Each zip code's rate is divided by the statewide rate to compute the index score. A decrease in index score means the zip code's rate of foreclosure has decreased relative to the state's rate in the past year, while an increase in index score means the zip code's rate of foreclosure is has increased relative to the state's rate in the past year.
