RE: Camp Ripley Demolition Landfill, SW-359
2014 Annual Groundwater Monitoring Report
WSN No. 0283B0009.014

Dear Mr. Wilson:

This report has been prepared in accordance with Minnesota Rule 7035.2585, item H and Minnesota Rule part 7035.2815, subpart 14, item Q. Item Q requires this report identify recent and long term trends in water elevations and concentrations of monitored constituents. Furthermore, the report should discuss the effect, if any, the Camp Ripley Demolition Landfill (landfill) is having on groundwater and surface water quality, and any recommendations for changes to the system. By permit, the annual volume survey at the landfill is only required in even numbered years.

The landfill is a private landfill within the boundaries of the Camp Ripley Military Reservation. The landfill occupies approximately 17 acres in the North 1/2 of the Northwest ¼ of Section 2, Township 130 North, Range 30 West, Darling Township, Morrison County, Minnesota. The location of the demolition landfill is shown on Figure 1.

The landfill operates under solid waste permit number SW-359, which was originally issued by the MPCA in July 1990. The landfill was re-permitted in August 1995, February 2002, August 2006, and again in 2012. The landfill is currently permitted to accept 75,000 cubic yards of waste and has an ultimate design capacity of 288,000 cubic yards of demolition debris and cover material. The ultimate life of the landfill is approximately 125 years. The landfill only accepts demolition debris generated at Camp Ripley.

The site is located within the central glacial drift region of Minnesota. The topography of the area consists of rolling hills and lowlands generally ranging in elevation from 1,140 ft mean sea level (MSL) to 1,275 ft MSL. Native ground elevation across the landfill site ranges from approximately 1,220 ft MSL to 1,200 ft MSL from west to east.

A paper published by J.J. Quinn of the Environmental Science Division of the Argonne National Laboratory in December 2006, titled Delineation of a Wellhead Protection Zone and Determination of Flow Paths from Potential Groundwater Contaminant Source Areas at Camp Ripley, Little Falls, Minnesota. The following glacial geological summary for the region is an excerpt from this paper:

“The geology and topography of the Camp Ripley property and its vicinity are the result of a complex glacial depositional history involving three ice lobes that deposited drifts of various characters and colors. These lobes were thought to have been concurrently active in central

Minnesota; however, a detailed geologic characterization of the site by UMD (2002) suggests new, previously unrecognized possibilities for the juxtapositioning of the ice lobes and for the nature of the St. Croix moraine at Camp Ripley. The lobes appear to have been present in the Camp Ripley vicinity concurrently, depositing well-sorted sands into an ice-bounded lacustrine basin.

Occasional ice advances deposited discontinuous till units in the basin at various elevations.”

On site geological information has been collected during various site investigations and monitoring well installations. The boring logs indicate the soil profile typically consists of silty loam topsoil, underlain by two feet of loamy sand, underlain by approximately 40 feet of fine sand. Clay was found below the fine sand at approximately 42- 51 feet below the surface. Wet saturated soils were noted at a depth below 28 feet.

The site is located within the Mississippi River watershed. Surrounding area waterways include the Mississippi River located approximately three miles east of the landfill, the Crow Wing River located approximately 13 miles north of the landfill, and the Little Elk River approximately two miles south-southwest of the landfill. Kraft Lake and the Kraft Lake wetland are less than one-quarter mile to the west and Ferrell Lake lies approximately one-quarter mile northeast of the landfill.

A regional groundwater model (Quinn, 2006) describes the regional groundwater flow direction as southeast at an elevation of approximately 1,170 ft MSL. Groundwater elevation measurements from the current monitoring well system indicate a groundwater flow direction at the site from north to south at an elevation ranging from approximately 1,209 ft MSL to 1,203 ft MSL. Boring logs from past investigations at the site indicate a low permeability clay layer below the landfill monitoring wells. It has been interpreted that the monitoring wells are screened in a perched aquifer with a local groundwater flow direction independent of the regional flow direction (Quinn, 2006).

Regional groundwater geochemistry is influenced by the glacial sediments and bedrock through which the groundwater flows. Land uses such as agriculture and irrigation have also been shown to contribute to the chemical makeup of groundwater in the area. These and other sources have the potential to influence the quality of groundwater monitored by the landfill environmental monitoring system. Water samples collected from upgradient monitoring wells at the site help to determine any influence upgradient groundwater chemistry may have on downgradient sample results.

The groundwater monitoring system at the landfill consists of five monitoring wells (DDLF-1, DDLF-2, DDLF-3, DDLF-4, and DDLF-5). The locations of the five monitoring wells are shown on Figure 2. Groundwater samples and depth to water levels are collected from the monitoring wells in the fall of each year as directed in the SW-359 permit. On November 12, 2014, Widseth Smith Nolting's (WSN) environmental technician, Mike Bogart, collected samples from the two down gradient monitoring wells, DDLF-4 and DDLF-5. Depth to groundwater measurements were collected from all five monitoring wells. The groundwater samples were analyzed for the list of inorganic and organic analytes in the attached Table 1. The required quality assurance samples were collected and analyzed as part of the 2014 sampling event.

The analytical results for the 2014 fall sampling event are summarized in Table 2, Table 3, Table 4, and Table 5. The inorganic and general chemistry parameters are summarized in Table 2 and Table 3. The results in Table 2 indicate minimal change in the water quality when compared to the results for previous years. Generally, the results in Table 3 demonstrate similar results in the water quality when compared to the previous year. Copies of the 2014 analytical reports are included in Appendix A.

*2014 Groundwater Monitoring Report
Camp Ripley Demolition Landfill
January 15, 2015*

The organic or volatile organic compound (VOC) groundwater quality results for the 2014 sampling event are summarized in Table 4 and Table 5. As shown in both tables, no VOC's were detected at or above their respective reporting limit in the 2014 samples.

The fall groundwater elevations are listed in Table 6 and the associated groundwater flow map is attached as Figure 2. Figure 2 indicates the groundwater flow direction is consistent with the historical flow direction, which is north to south across the site.

Well stabilization parameters were measured and recorded prior to sample collection. A HydroLab Data Sonde 4A water quality multi-probe and a flow through cell were used to measure the stabilization parameters. The well stabilization forms are attached as Appendix B.

By permit, an annual volume survey is required every other year at the demolition landfill. In 2014, the annual survey was completed by WSN staff in October. The annual survey indicates 4,167 cubic yards of demolition debris and cover material were placed in the landfill for years 2013 and 2014.

In 2015, the analysis schedule specifies sample collection and analyses identical to 2014. No dissolved metals were detected in the two groundwater samples above their respective intervention limit (IL). Furthermore, as summarized in Table 4 and Table 5 no VOCs were found in the monitoring well samples above the laboratory's reporting limits. Based on the analytical results for 2014 and past analytical results, we do not believe it is necessary to make any changes in 2015 to the landfill's groundwater monitoring network or the published analytical schedule. Evaluation/inspection reports relative to the 2014 landfill activities are attached as Appendix C.

Please let me know if there is any other information that you might need. My direct telephone number is 218.316.3623 or you can send an email to Greg.Smith@wsn.us.com.

Sincerely,

WIDSETH SMITH NOLTING

Gregory W. Smith, P.G.

Baxter, MN 56425

RE: Project: Camp Ripley DDLF
Pace Project No.: 1241151

Dear Greg Smith:

Enclosed are the analytical results for sample(s) received by the laboratory on November 13, 2014. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Melisa M Woods
melisa.woods@pacelabs.com
Project Manager

QUALIFIERS

Project: Camp Ripley DDLF

Pace Project No.: 1241151

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-M Pace Analytical Services - Minneapolis

PASI-V Pace Analytical Services - Virginia

ANALYTE QUALIFIERS

H6 Analysis initiated outside of the 15 minute EPA recommended holding time.

- Brief reiteration (one or two paragraphs) for each of the following topics:
 - Hydrology;
 - Geology;
 - Hydrogeology;
 - Geochemistry.
- Description of historical and current groundwater flow directions;
- Discussion of the analysis performed (including field parameters);
- Discussion of any exceedances of performance standards;
- Discussion of trends (if any);
- Description of any problems that may have been encountered;
- Summary;
- Conclusions;
- Recommendations;
- Figures (including survey information described in Sections 2.1 through 2.4);
- Attachments:
 - Laboratory analytical results;
 - Field data sheets;
- Tables:
 - Required analytes and sampling frequency;
 - Measured field parameters;
 - Static water elevations (in MSL);
 - Summary of monitoring well information.

Additionally, the Contractor will complete and provide to DMA for submittal, the MPCA's Solid Waste Land Disposal Facility Annual Report (W-SW7-02). One MPCA Solid Waste Land Disposal Annual Report shall be completed for the MMLF and on MPCA Solid Waste Land Disposal Annual Report shall be completed for the DDLF for each reporting year; they are to be submitted to DMA no later than 15 January of the year proceeding the reporting year.

2.4 Groundwater Scope of Work

Groundwater sampling, laboratory analysis and groundwater reporting work described under Section 2 "Groundwater Sampling/Analysis and Annual Report" is to be completed in Calendar Year 2013, Calendar Year 2014, Calendar Year 2015 and Calendar Year 2016 with deliverables being submitted concurrent with survey work in the calendar year immediately proceeding the sample event.

ENGINEERING ARCHITECTURE LAND SURVEYING ENVIRONMENTAL SERVICES

DATE: 11/12/14

PROJECT NAME: Camp R. play PROJECT NUMBER: 0283B 0009.014
LOCATION: Randall, mn WEATHER: Overcast
TEMP. MIN. 18°F TEMP. MAX. 24°F ENGINEER PERSONNEL: MB
CONTRACTOR(S): _____
SUBCONTRACTOR WORKING: _____
WORK DONE BY ENGINEER: Fall Sampling Event

DAILY PROGRESS (Contractors & Subcontractors): Checked in @ Range Control @ 9:00. Tim at Range Control asked me to sample the Demolition Landfill first because the person who needed to get one the key for the closed landfill was busy. Got to Demolition Landfill and located the wells. Did not have a key for the Monitoring wells so I had to get a hold of Mark Erickson. He brought one out to me. Sampled DDLF-4 + DDLF5 and checked static water level in DDLF-1, DDLF-2, DDLF-3. On the way back to range control I found MW-3 and sampled that. Found Tim at Range Control and got the key for the closed landfill area. Could not find MW-7 because it was on an off-grade so I sampled MW-8 and called Mark Erickson to see if he could help me find MW-7. Located MW-7 and sampled that as well. MW-7 was FWD. Took Equip Blank at 13:20. Returned to Range control and turned in the keys and my range pass.

SWL DDLF 2 - 19.03

DDLF 3 - 26.34

DDLF 1 - 29.98

Samples will be sent to Peet Virginia tomorrow.

Evaluation Reports

PERSONNEL AND TRAINING INFORMATION

Certified personnel on duty at the site during hours of operation in 2014 included Jesse Turner, Thomas Sobania, and Robert Helmerick. This list of personnel may be adjusted from time to time as staffing changes through new hires, job vacation, or staff transfers.

Demolition debris land disposal facilities are classified as Type III facilities in Chapter 7048 of the MPCA rules. Therefore, the demolition debris facility operator must be certified for a Type III facility or higher. An applicant is required to complete four hours of training through the MPCA prior to taking the certification examination and is required to complete six hours of contact training every three years for certificate renewal.

EMERGENCY/CORRECTIVE ACTION REPORT

No emergency or corrective actions were necessary in 2014. Landfill operating personnel monitor the landfill regularly for any potential issues. Any problems are documented and corrected promptly to prevent the need for emergency or corrective actions. However, should action be required, Camp Ripley has emergency protocol, equipment, and personnel in place to respond to any needs.

INSPECTION REPORTS

A self-inspection of the facility was conducted monthly by Camp Ripley staff in 2014 to ensure that only permitted wastes were received at the facility and that the equipment was

maintained and in good working condition. The inspections also focused on the status of drainage control structures, as well as any equipment malfunctions, deterioration, or discharges that may result in the release of pollutants. Specifically, each inspection included a review of the following items:

- Uncontrolled vegetative growth;
- Soil erosion on slopes and completed areas;
- Rodent and burrowing animals;
- Settlement of completed areas;
- Surface water control system; and
- Site security.

There were no significant problems indicated in the monthly inspections. Copies of the monthly landfill inspection forms follow.

CLOSURE, POST-CLOSURE, CONTINGENCY ACTION

The Camp Ripley Demolition Debris Landfill facility will be closed as specified in the "Application for Permit Reissuance, Camp Ripley Demolition Debris Land Disposal Facility" dated January 2012, and in accordance with Minn. R. 7035.2625. The facility will also comply with post-closure care requirements in accordance with Minn. R. 7035.2645, and will implement any contingency actions necessary to comply with the requirements in accordance with Minn. R. 7035.2615. There are no changes to the current plans recommended at this time.

EVALUATION OF ISWMP

Wastes received in 2014 at the landfill were controlled as described in the Industrial Solid Waste Management Plan submitted in the January 2012 application for permit reissuance. Because the ISWMP was updated in 2012, no new changes are recommended at this time.
